radiative carrier recombination at dislocations 3=17860
radiative surface effect 0=1642
range of $Cs^{134,137}$ ion beams at keV energies 2=22276
recomb., at Ni, 80-250°K 3=6580
recombination radiation shift on pulse current injection, in diode 3=20539
recomb. relaxation effects in surfaces 0=4345
recrystallized, triangular patterns of dislocations 2=23810
refl. coeff. rel. to refr. index and absorpt. coeff., 23.6-113 A 4=22846
reflectance of evap. films 4=28690
reflectance in 2650-10 000 A region, effect of surface damage 4=7133
reflection, i. r., for polarization prod. 4=5401
reflection of noble-gas ions 1=10744
reflection, visible, at 300°K, evidence for spin-orbit interaction 0=18120
reflectivity in fundamental absorption region, temp. and doping effects 1=8982
reflectivity modulation by electric field 1=11829
reflectivity spectra, visible and u.v., fine structure and temperature dep. 3=10909
reflectivity spectrum fine structure in near u.v. 3=4961
reflectivity, surface treatment effects 0=15990
reflectivity and transmission, vacuum u.v., 6 to 30 eV 3=13145
reflectivity, u.v. and visible, method of meas. 0=10754
reflectivity, var. with wavelength, and electron effective mass, As-doped 3=22930
refractive index near absorption edge, calc. 0=11668
regrowth from molten In or Pb 1=14970

Germanium—contd
removal of Cu and Ni impurity 0=820
residual gases in vacuum, adsorption and desorption 2=12951
resistance thermometers, calibration, 1.4-4.2°K 1=2909
resistivity, microwave, of doped spheres 0=5243
retention of bombarding Kr^{85} ions 2=18627
scattering processes in, group theory 1=17392
screw dislocation 1=19775
second sound receiver 2=11550
secondary electron emission, and electron reflections 0=12631
secondary electron emission, film thickness depend. 1=13123
secondary electron emission rel. to photoelectric emission 4=8808
Seebeck coeff., effects of strain 0=1643
segregation coefficients of Ga, In, Sb and Bi, concentration-dependence 4=7556
selective melting by thermal radiation 2=9462
self-diffusion, effect of dislocations 2=3940
shallow donors, e.s.r., stress effects 4=13318
single crystal, etch pit density discrepancy 1=17542
single-crystal films, epitaxially grown, dislocations 0=17938
single-crystal films prep. 2=19109
single-crystal X-ray diffr. patterns 2=21511
single crystals, dislocations, distrib., density 2=21038
single crystals, epitaxial vapour growth, closed-cycle process 0=18325
single crystals, resistivity striations 1=12379
single dislocation, X-ray meas. of distortion field 0=4291
slip, single without cracks, etching obs. 3=22792
Sn-Ge contact, photo-response 2=7645
Sn segregation and solubility, during crystallization 1=11583
solid solutions, with Au, Hall effect data 2=8859
solid solns. of Cu in, supersaturated, decomposition 1=15159
solid solutions, excess entropy 0=1641
solubility of Au, 500 to 870°C, by elec. resistance 4=26539
solubility of Ga, from saturation current in p—n juncn., 360°-550°C 4=30793
solubility, solid, of impurity elements 0=18396
solubility, in $ZnGeAs_2$, $CuGe_2P_3$, X-ray thermal obs. 4=4496
specific heat at high temp. 2=14378
specific heat, low-temp., of n-type ingots 1=17420
spectra, far-i.r., 7.5°K meas. 4=26197
spectrum, absorpt., var. with Sn doping 4=17566
spectrum of GeII, analysis 4=6473
spectrum, i.r. absorption, and Cu acceptor levels 1=1057
sputtered surfaces, hillocks 3=24386
sputtering, deposit patterns 3=22877
sputtering, ejected atom distrib. 2=13608
sputtering, ejection patterns, temp. depend., 0-350°C 4=6903
sputtering, using 1-5 keV Ar^+ ions 3=9877
sputtering of single crystals, atom ejection patterns 1=1929
sputtering, strong focusing without channelling 4=25980
stacking-fault energy 3=17765
strain coeff. of thin layers 0=16198
strain field, X-ray study by anomalous transmission 1=6451
stress and dislocation distribution, photoelastic study 1=20321
stress optical constants 1=17869
stress-strain relations, rel. to temp. and strain rate 1=14864
stress—strain relations, rel. to temp. and strain rate 1=20319
structure changes at high press. 3=11210
structure of clean (100) and (111) surfaces 3=13554
suitability as i.r. polarizer 0=1045
surface-barrier counters, response to N ions and α-rays 1=5616
surface, clean, H/D exchange search 2=10962
surface cond. relax., slow, temp., press., H_2O vapour var. 4=20358
surface diffusion in Cu 4=22611
surface elastic waves 1=4400
surface energy, cleavage meas. 3=25177

Germanium—contd
surface growth and cleavage, electron microscope exam. by replica 4=13646
surface levels, optical study 3=2989
surface, (100), bonding model 2=23911
surface props. from slow relax. of elec. cond. and work function in gases 4=22715
surface reactions with O and I 3=13555
surface recombination velo. validity criteria 4=22695
surface, spreading of molten In over 4=4656
surface, structure and carrier recombination, 100° to 700°C 4=7700
surface structure, cleaved (111) 3=11312
surface structure and surface migration, study by ion and electron microscopy 4=29175
surface structures of single crystals 1=20411
surface study of frustrated total internal reflection spectra 0=10030
surface tension, temp. depend. 0=19089
surfaces, abraded, dislocation cracks 3=12981
surfaces, for epitaxial devices substrates 3=6880
surfaces treated with HF-H_2O_2 4=9910
Ta diffusion and solubility in 0=1599
Te, diffusion and solubility 2=12453, 21063
texture of single crystals, by parallel X-ray beam method 0=4628
thermal conductivity 1=920
thermal cond., effect of fast neutrons 4=4003
thermal conductivity, rel. to fast neutrons 3=17674
thermal cond. at low temp. of n-type, calc. using new phonon-scattering mechanism 1=8887
thermal conductivity, p- and n-type 2=20950
thermal conductivity, p- and n-type 3=2741
thermal conductivity, 3°K to melting point, meas. and theory 4=17383
thermal cond., 3°-1020°K 0=17903
thermal diffusivity, 30°-1000°C 0=16908
thermal cond., 300°K 1=16133
thermal conductivity, 300°-1200°K 3=10611
thermal expansion anomalous negative low-temp. values 3=10603
thermal expansion, Grüneisen parameters, lattice vibrations 4=22507
thermal expansion, rel. to impurities, 77° to 340°K 4=9862
thermal expansion at low temp. 0=7854
thermal expansion 30-500°C, nonlinearity with temp. 2=20940
thermal expansion, 2°-> 42°K 3=15443
thermal shock behaviour rel. to conductivity 4=6763
thermodynamics of impurity doping 4=1470
thermoelec. power in n-type, effect of edge dislocations, calc. 1=10070
thermoelectricity, temp. and carrier density var. 3=20426
thermo-e.m.f. of heavily alloyed Ge 3=15631
thin film, absorption and reflectivity, u.v. 3=2995
thin film on Ge base, refractive index, small difference, meas. 3=24007
thin films, oxidation 2=23957
3°K to melting point, meas. and theory 4=17383
Tl diffusion and solubility 2=12460, 14465
twin structures, etching and fracturing techniques 0=13965
u.s. absorpt., 100°-400°, rel. to electron-phonon relaxation peaks 2=23054
u.v. absorption and reflectivity 0=8004
ultrasonic absorption, rel. to thermal parameters 4=6724
u.s. attenuation, 1-300°K 0=11573
u.s. pulse propagation, 62 Mc/s 3=10592
u.s. wave propag. in n-type, meas. 4=20200
u.v. emission spectrum, use for analysis 0=16397
vacancies, lattice, formation energy calc. 3=6511
vacancies, quenched-in 3=22750
vacancies, strains and mech. relax. 3=22754
vacancy aggregates 2=6313
vacancy diffusion during quenching calc. 2=21076
vacancy-interstitial annealing of radiation damage 2=8266, 14483
valence bonds, calc. 1=2364
valence electrons, approx., wave-functions 0=469
vaporization rate in Te vapours, rel. to pressure 1=11858
vibrational amplitudes and Debye temp., from X-ray reflection 2=18522
Voigt effect, free carrier, anisotropic, in n-type 4=26194
wafers, slip and Lomer—Cottrell barriers 3=10679

Germanium—contd
wafers, thickness meas. 0=6722
wave propag., u.s. 4=20201
wedge, effect on transmittance meas., 2-15 μ 4=20443
wetting and dissolution, by molten Ge, uniformity 4=4655
wetting by In, and Ge surface energies, var. planes 4=13672
whiskers and needle-shaped crystals, prep. and props. 4=10480
work function, effect of adsorbed oxygen 0=9059
work function, local changes due to dislocations 4=21553
X-ray absorption, anomalous, calc. 2=23579
X-ray absorpt. coeff. 2=14987
X-ray absorption spectrum, fine structure of K-edge 1=12501
X-rays, anomalous transmission and dislocations 3=20947
X-ray anomalous transmission and reflection of pure crystals 1=10253
X-ray atomic scatt. factor, imag. part 3=11257
X-ray crystallog. 2=12906
X-ray diffr., asymm. Bragg case 3=5098
X-ray diffr., dynamical, meas. with fluoresc. radiation 4=10509
X-ray diffraction, effect of thermal vibr. 2=12903
X-ray diffraction of elastically bent crystals, self-adjustment of internal radiation field 0=1904
X-ray diffraction pattern of single crystals 1=9134
X-ray diffraction pattern of single crystal 1=15069
X-ray interference for coherent and incoherent source positions 2=14993
X-ray, K-absorption, extended line structure, rel. to polarization 3=20500
X-ray K-absorption spectrum, fine structure 4=4258
X-ray Kossel lines, effect of lattice distortions 2=14997
for X-ray monochromatization, use of dendrites 4=24777
X-ray polarizer appl. of dislocation-free crystal 1=16473
X-ray reflection from dislocations, intensity 3=5063
X-ray reflection, dynamical theory 3=10972
X-ray reflection props. 3=1318
X-ray scatt. factor, imaginary part, theory and expt. 1=11559
X-ray spectra, L series, effect of small Sb impurities 1=20002
X-ray spectrographic study 0=13469
X-ray spectrum, emission, effect of Ga and Sb 1=17904
X-ray spectrum short wave limit 3=4919
X-ray transmission, anomalous 3=5099
X-ray transmission, anomalous, deform. effects 3=20197
X-ray transmission, anomalous, rel. to impurities 4=2077
X-ray transmission, anomalous, temp. depend. 4=20455
X-ray transmission, Cu $K\alpha$, anomalous, var. with doping 3=10975
Zn diffusion and solubility 2=12453
zone melting purification, improved agitation method 2=812
Ge:Cu and Ge:Hg as radiation detectors 4=361
Ge:Fe, i.r. absorption spectrum 2=18848
Ge—H_2SO_4 boundary capacity, var. with electrode pot. meas. 4=30904
Ge-Si mixtures, isotopic phonon—phonon scatt. 2=23090
Ge—solution interface potential 0=14124
Ge^{71} in Ge self-diffusion 2=2093

ionization potential meas. using α-particles 2=19903
ions, Au$^+$, in Ge, photocond. kinetics 4=1684
ions in metal, mobility, effective charges 2=18609
ions of Z (2 to 13), multicharged, range 2=7674
irradiation damage by 300 keV protons, preferential atom ejection in (110) directions 0=13564
Kapitza resistance meas. 3=12017
L-Auger electrons and X-rays, under electron impact 3=1227
lamellae, single crystal, mutual orientation 0=13934
lattice planes of 2.35A spacing, obs. with electron microscope 4=15782
lattice spacing by electron micr. 4=15784
lattice vacancies, quenched-in, and quenching rate 2=21001
lattice vacancies, resistivity 3=22893
lattice vacancy concn., from thermal expansion 2=3903
lattice vibrations, particle of electron gas 2=6262
layers, effect of thickness on electron diffraction patterns 1=6512
leaf, formation, structure, stability 0=1942
liquid, atomic distribution, structure 0=19123
liq. and solid, thermal expan. 0=9893
liquid, structure, by X-ray scatt. 3=9438
liquid structure, by X-ray scattering and atomic distribution 1=15840
Lorenz number at low temp. 4=6919
low energy ion bombardment effects 1=14346
m.f.p. of electrons from elec. conductivity of films, var. with thickness 4=4117
mag. susceptbility, temp. dependence, 295-975°K 1=1194
magnetoacoustic effect to 350 Mc/s, Fermi surface dimensions 3=2759
magnetoplasma resonance, l.f., meas. 3=8409
magnetoresistance, anisotropy, Fermi surface 0=9939
magnetoresistance, effect of plastic deformation 2=2122
magnetoresistance, rel. to Fermi surface 0=15893
mass transport in amalgam, in crossed elec. and mag. fields 1=1966
melting point 1=5381
microcrystal growth, indented front, in colloid 2=6774
molten, scatt. diagrams evaluation 2=17439
molten, structure analysis 1=12863
Mössbauer effect in embedded Au^{197} 1=11147
Mössbauer effect, of Fe^{57}, temp. var. 4=15401
neutron absorption, long-wavelength cross-sections 1=16812
neutron irrad. damage, effects of impurities, vacancies dislocations 4=28503
neutron irrad., electron microscope obs. 2=6321
neutron irrad. at 4.5°K, effect of initial defect conc. on annealing 4=12829
neutron irrad., stage II and III recovery 3=2848
nucleus, screened, electron scatt. calc. 4=9667
optical constants 0=666
optical constants, calc. 0=4389
optical consts., polarimetric method 3=11943
optical constants and surface elec. resistance 1=6201
optical constants, temperature dependence 1=10088
optical films, preparation and properties 3=9603
optical films, resonance phenomenon 2=23513
optical props., dielectric const., and band struct., review 4=13047
optical props. of thin films, effect of exposure to air 0=1722
oriented crystals, plastic deform. 4=26512
photocathode films, quantum yield, optimum thickness 1=13119
photoelectric emission, by X-rays, 0.28-9 keV, on films, effective depth 3=21864
photoelectric yield data, vacuum u.v., 8 to 24 eV 3=13145
photoelectric yield, 3000-250 A 3=21865
photoelectric yield and work function of films 3=426
photoelectron emission, from films, depth depend. 2=1482
photoexcited electrons in, mean free path 2=18747
photovoltaic emission into CdS 3=23013
plastic flow, surface removal effects 4=7430

Gold—contd
plastically deformed single crystals, activation energy and activated vol., effect of surface condition 4=30763
point defect processes and recovery 2=23153
point defect study by electron irrad. 4=25922
point defect study, expansion meas. and X-ray diffr. techniques 4=30551
point defects, elec. resistance study, review 1=14249
point defects, rel. to electron-irrad. 3=22726
point defects in irradiated metal, review 3=8420
point defects due to plastic deformation 3=22720
polycrystalline, adsorpt. of Ba, photoemission characts. 4=24731
polycrystalline, etching with 8 keV A ions 0=8173
polycrystalline, high-temp. creep and fracture 4=28953
precipitation in α-Fe 2=15063
proton irrad., 10 MeV, stage III recovery 4=10011
proton penetration along lattice open channels, at 75 keV 4=4086
proton range in, calc. 0=15354
quench-hardening and resoftening 0=21150
quenched, high-temp. anneals 4=25925
quenched, observations of defects 0=15838
quenching experiments, interpretation, vacancy interactions 1=961
quenching, producing internal friction and elastic modulus changes 4=23156
radiation damage 4=30587
radiation damage by neutrons, from electron microscope examination 3=8939
radioactivity, extraction by condensation processes 0=5681
range of Be^9 ions in, at 2-21 MeV 3=2048
range of C ions in 1=4667
range 40-160 keV electrons 0=2399
ranges of N ions, 0.4-6.4 MeV 3=4211
recovery, stage I, of neutron-irrad., rel. to quenched-in vacancies 4=4097
refl. coeff. rel. to refr. index and absorpt. coeff., 23.6-113 A 4=22846
reflection of light, phase change dependency 0=1036
reflectivity, u.v., absence of temp. depend. 2=18790
residual elect. resist. due to impurity charges 2=6402
resistance of films and contacts 3=15537
resistivity elec., due to Ag and Zn impurities 3=25320
resistivity, quenched-in, recovery, rel. to dopant 20°-170°C 3=17818
resistivity of stacking fault, vacancies 2=23230
resonance interaction with slow neutrons at low temp. 3=4801
secondary electron emission, N and Ar ion bombard., for samples in tension 0=19731
secondary electron emission, 1 MeV proton bombardment 3=24344
semiconductor devices, tunnel diodes, alloyed contacts to Si and Ge, low resistance 3=20360
shear stress, critical, of single crystals 3=1238
single crystals, surface effect on recrystallization 4=29055
skin effect, i.r. data 0=6078
solid solubility of Ho 4=13459
solid solution, with Ge, Hall effect data 2=8859
sols, optical absorption rel. to part. size, temp., prep. method 4=23681
sols, specific heat 0=18443-5
solubility in Ge, 500 to 870°C, by elec. resistance 4=26539
sound velocity, effect of high mag. field 3=8356
specific heat, anomalous, at liq. He temps. 2=10331
specific heat, calc. 0=7850
specific heat Debye temp., anomalous, low temp. 4=25854
specific heat, 1.3-4.2°K 1=3606
specific heats at high purity 2=8171
spike regions, form. by Ar$^+$ and Xe$^+$ bomb. 3=6552
sputtered atom energy spectrum under 43 keV Xe$^+$ 2=17900
sputtered, focused collision sequence energy, <110> 4=4096
sputtering by Ar beam 2=3092
sputtering by Ar ions 1=4671
sputtering by Ar, meas. of yield by replication 4=27582
sputtering, by Ar$^+$ ions, directional ejection, effect of thermal motion 3=452
sputtering by Ar$^+$ and Kr$^+$ ions, using radioactive tracers 2=3098

Gold—contd
sputtering, ejected atom distrib. 2=13608
sputtering, by 20-100 eV He, Ne and A ions 2=13607
sputtering yield, low energy, guarding effects 3=22876
stacking-fault tetrahedra and black spots, rel. to α-irrad., 1-3.5 MeV 3=17770
stacking-fault tetrahedra, irradiation-induced annealing 4=4065
stacking fault tetrahedra nucleation 3=22798
stacking fault tetrahedra, nucleation and growth 4=17435
stacking faults, energy calc. 4=12769
superconducting transition temp. calc. 4=5515
superconductivity of contacts of Sn-plated wires 0=5235
superconductivity, magnetic field dependence 1=3595
surface diffusion on Cu 4=15487
surface polishing and thinning electrolytically 4=29185
surface potential meas. of Au with adsorbed O_2 deposited on glass 4=23598
surface roughness, meas. by adsorption of I^{131} 3=13556
surface, self-diffusion study, 272°-950° C 4=25963
surface, spreading of Hg, capillarity 2=7187
surfaces, catalytic action in atomic beam recombination 2=4522
surfaces, heated, impurity effects 2=6845
thermal conductivity 1=920
thermal conductivity, phonon and electron components, separation methods 3=12930
thermal e.m.f., elec. and thermal cond., low temp. 4=1698
thermal expansion, lattice const. changes from Bradburn—Fürth eqn. of state 4=20219
thermal expansion, 30-500°C, nonlinearity with temp. 2=20940
thermal expansion, 20°-1200°K 3=17663
thermal expansion, X-ray meas. 3=10605
thermal lattice defects and the energy content 0=6038
thermal lattice defects, rel. to expansion and structural energy 1=14289
thermal spikes, obs. by sputtered atom energy spectrum 3=8421
thermal vacancies, formation energy, specific resist. 1=11192
thermoelec. effect, homogeneous, of third degree (1^{st} Benedicks effect), in single crystal 4=28655-6
thermoelectric power of crystal vacancies, 4.2°-220°K 4=28657
thermoelectric power, effect of crystal imperfections 4=7086
thermoelectric power, effect of lattice defects 4=20435
thermopower and elec. resist., rel. to vacancies 4=10142
thin film, abnormal optical absorpt. 4=22866
thin films, annealing effect on structure 4=23578
thin films, optical absorption and dispersion 2=2891
thin films, optical constants, rel. to heat treatment 3=13146
thin films, optical consts. theory 4=22868
thin films, optical constants near u.v. 0=2248
thin film, scatt. factor meas. 4=22837
thin films, structure 2=6848
thin films, structure, irradiated 2=6849
thin films, structure and optical props. 1=19939
thin films, transmittance meas. of phase changes 4=22829
thin layers, absorption and dispersion 0=4402
thin single-crystal films, mech. props. 1=1452
threshold energy to displace atom from lattice and subthreshold displacement 4=12827
transport properties, Fermi surfaces 1=8893
twin boundaries, coherent annealing, as vacancy sinks 4=9973
twinning, in evap. films 1=4009
twins in vapour-grown f. c. c. whiskers 4=4527
vacancies and divacancies, diffusion 3=4863
vacancies, energy of formation 1=3654
vacancies, energy of formation 1=7577
vacancies, excess, liquidation, rel. to plastic deformation 3=4862
vacancies, formation energy and conc. 1=7575
vacancies, properties 3=22738
vacancies in quenched crystals, annealing out 4=22561
vacancies quenching-in and annealing-out 4=6829
vacancies, study by relaxation method 2=14429
vacancies, and vacancy aggregates, annealing in quenched specimens 4=12734
vacancy annealing, pressure effects to 10 000 kg/cm² 1=8904

Gold—contd
vacancy capture by a dislocation, annihilation probability 0=17931
vacancy clustering, influence of oxidizing and reducing treatments 4=22560
vacancy formation, pressure effect 3=8430
vacancy precipitation, after quenching, internal friction study 0=17952
vacancy quenching by sparks discharges 2=8204, 10378
vapour, ionization by electron impact 0=14967
vapour pressure and heat of sublimation 2=15806
vibrational spectrum and lattice spec. heat 1=7530
void formation, strain induced 3=13364
whiskers, field emission study 1=8342
whiskers, by vapour deposition 2=8798
wires, attachment to semiconducting films 1=11670
wires, exploding, current density—dependent resistivity 0=2850
work function, effect of adsorption of H, air, and dipole moment 4=11683
work function, effect of air and H_2 4=14741
work function during vacuum—air transition 0=19706
work hardening, effect of temp. and rate 1=1333
X-ray diffraction lines, effect of deformation 2=23841
X-ray L intensities 1=13951
X-ray L spectrum, emission 2=6588
X-ray line broadening from polished surface, Fourier analysis 1=11557
X-ray reflect., and crit. angle and absorpt. 4=28675
X-ray spectrum, new L transition, non-quadrupole 3=8183
Young's modulus, decrease after deformation and recovery 4=15703
zone refinement and activation analysis 3=3345
Au electrical transport (diffusion) in solid gold 2=6365
Au—Al layered films, diffusion study 2=6364
Au—Co thermocouple, low temp. transport props. 0=7858
Au—quartz reflection layers, phase change 0=1036
Au—Si surface barrier particle detector 2=11834
$Au^{191,193}$ hyperfine-structure separations 4=25499
Au^{197} in metallic Au, Mössbauer absorption 4=1349
Au^{198} dissolved in Fe or Ni, local magnetic field, sign 3=5007
Au I resonance doublets, absolute oscillator strengths 4=6485

Gold compounds
antifogging and sensitizing action on photographic emulsion 3=11952
Au alloys, as break contact material, transfer of matter 1=16294
alloys, crystal, Brillouin zone interactions and Fermi surface distortion 4=12700
alloys, dilute, conduction electron transfer 3=25220
Au alloys, dilute, lattice thermal conductivity 0=20754
Au alloys, electron states, X-ray spectrometric study 1=19998
Au alloys, electronic band structure 1=1409
alloys, grain boundary delineation by rapid cooling 4=10581
Au alloys, lattice spacings in close-packed α and ζ phases 1=1408
Au alloys, paramag., extraordinary Hall effect 2=23248
alloys, superconductivity 3=16873
Au alloys, thermoelec. power, effect of transition metals 3=13139
alloys, vacancy—impurity binding energies 3=8424
Au amalgam, mass transport of Au in crossed mag. and elec. fields 1=1966
binary alloys with rare-earth metals, structure 3=18336
Au germanide, metastable phases, X-ray diffr. exam., supercond. props. meas. 4=29833
Au hydride, u.v. absorption spectra 4=1260
salts, use in sensitization of photog. emulsions 0=12745
Au tellurides, metastable phases, X-ray diffr. exam., supercond. props. meas. 4=29833
Au(III) tetrahalo complexes, charge transfer spectra 2=4144
Au-transition metal alloys, low temp. thermoelectricity 2=6508
Au-transition metal alloys, model 2=16675
Au—Ag alloys, conductivity, electrical, changes on heat treatment, due to ordering 3=22894
Au—Ag, dislocation relax. peaks meas. 4=20656
Au—Ag, elastic parameters rel. to composition 4=23158

Gold compounds—contd
Au—Ag, heat treatment, explosive, study by microhardness 4=13410
Au-1.2 at Ag, quenching studies, rel. to vacancies 2=10379
Au—Ag, surface free energy, anisotropy, effect of impurities and temp. 4=17373
Au—Ag, thermal e.m.f. against Cu 0=1686
Au—Ag—Zn alloys, internal friction 2=21397
$AuAgZn_2$, crystal structure, atomic 4=4608
$AuAl_2$, $AuGa_2$, $AuIn_2$, similarity, low temps. 4=6743
$AuAl_2$, de Haas—van Alphen effect 3=12944
$AuAl_2$, elec. props. meas. 3=10718
Au_2Al, at Au—Al films interface 2=6364
Au—Ba films, on W, work function 1=15174
Au—Ba system, stabilization of work function, activation energy 0=17023
AuBa, band spectrum analysis 1=19637
AuBa, spectrum, vibr. analysis 3=19979
Au_5Ba, superconducting transition temp., var. with structure 4=5515
AuBe, Mg, Ga, Si and Ge, spectra, vibr. and rot. and mol. consts. 4=22352
AuBe, superconductivity 0=5237
Au_2Bi, Mössbauer absorption in superconducting state 1=18713
$AuBr_4^-$, mean amplitudes of vibr. from Raman freqs. 4=15318
AuCa molecule, visible absorption band constants (1600° to 2000°C) 1=9931
AuCa, spectrum, vibr. analysis 3=19979
Au—Cd, α, α_2 and β' phases, structure 3=6855
Au-20% Cd, f.c.c, filings, heavy deform. faulting, by X-ray diffr. 3=8418
Au—Cd, self-diffusion of components 1=14306
β-AuCd, spectral reflectivity rel. to temp. 2=18789
Au—CdTe, photovoltaic effect for barrier cells 4=17400
$AuCl_4^-$, mean amplitudes of vibr. from Raman freqs. 4=15318
Au—Co dilute alloys, mag. props., very low temp. 4=20540
Au—Co, dislocations, decoration by precipitation 1=12384
Au—Co (1.57 wt.%), mag. anisotropy, on cold rolling 3=20580
Au—Co magnetoresistance at low temp. 0=7912
Au—Co, precipitation and mag. props. 0=21242
Au—Co, resistance, at low temp. 0=7912
Au—1·5% Co small particles, electron microscope exam. 3=1090
Au—Co solid solutions 4=7468
Au—Co, specific heat, 1.2° to 5°K meas. 2=8167
Au—Co, thermal cond. at 3°-35°K 3=10614
Au—Co(2.1 at.%), thermo-e.m.f. against Cu 0=1686
Au—Cr, antiferromagnetic properties 1=20162
Au—Cr, low-temp. mag. transition 4=17650
AuCr, molecular dissociation energy 2=8128
Au—Cu, antiphase boundaries during superlattice transition 0=21212
Au—Cu, antiphase domain boundaries 0=8278
Au—Cu and Au—Cu—Ni, resistivity and thermoelec. power 0=4373-4
Au—Cu, films, polyhedral holes 0=8285
Au—Cu, grain boundary energies 0=16344
Au—Cu, heats of formation 1=4063
Au—Cu, kinetics of ordering, X-ray study 0=16316
Au—Cu, n.m.r. intensities 1=20260
Au—Cu, periodic antiphase structures 1=12646
Au—Cu, periodic antiphases 0=3229
Au—Cu, solidification curves 3=12002
Au—Cu system, complex phase 1=1407
AuCu crystals in thin films, twinning 4=12776
AuCu, cubic to orthorhombic transformation, crystallography 1=2540
AuCu, elec. cond., temp. variation 3=10720
AuCu, order and disorder-antiphase transitions 3=8887
AuCu, order—disorder transformation energy 1=2541
AuCu II, nucleation, growth from disordered state 3=8901
AuCu II, period, impurity effects 2=2407
AuCu II, structure 3=8880
$AuCu_3$ crystal electron states, energy splitting, calc. 3=17688
$AuCu_3$, crystal ordering, temp. var., by quenching 3=20871

Gold compounds—contd
$AuCu_3$, diffraction by periodic antiphases, theory 0=3227
$AuCu_3$, direct observation of superdislocations 0=13531
$AuCu_3$, electron field emission microscopy 0=4700
$AuCu_3$ films, ordering, temp. depend. 1=7893
$AuCu_3$, Hall effect temp. depend., rel. to order 2=6419
$AuCu_3$, long range order 2=10912
$AuCu_3$, secondary electron emission 2=17879, 20021
$AuCu_3$, structure analysis by Fourier transformation 1=11567
$AuCu_3$, superlattice, antiphase domain boundaries 0=18403
Au_3Cu, elec. resistivity, effect of ordering 0=17997
Au_3Cu order, effect of cold work 2=4462
Au_3Cu, ordered structure 4=13485
Au_3Cu, ordered structure, electron diff. study 0=3228
Cu—Ge—Au, h.c.p. ζ-phases, axial-ratio changes 4=7618
Au—Cu—Ni, order, long-range 3=18348
Au—Cu—Ni phase transformations, order—disorder, X-ray diffr. obs. 4=7493
Au—Cu—Zn, antiphase domains 0=21235
Au—Cu—Zn, Martensitic transformn., structure, boundary, stacking, theory 4=29008
Au—Fe, Au^{198} polarization 1=14155
Au—Fe dilute solid solns., mag. ordering, Curie temp. calc., from Mössbauer spectrum, low temps. 4=10277
Au—Fe, low-temp. mag. transition 4=17650
Au—Fe, polarization of Au nuclei by mag. fields 0=9520
Au—Fe alloy thermocouples, low temp. use 4=8537
Au—Fe alloys, thermoelec. power at ~1°K, rel. to refrigeration 2=22105
$Au_{0.9}Fe_{0.05}$, mag. props., low temps., high fields 4=10278
$Au_{0.95}Fe_{0.05}$, magnetic ordering 4=17651
$AuGa_2$ de Haas—Van Alphen effect 3=12944
$AuGa_2$, elec. props. meas. 3=10718
AuH and AuD, far u.v. spectra 4=30431
AuH, electronic-band spectra, by exploding wire method 4=25635
Au—Hf, structure 1=6528
Au—0.25 at.% Hg, neutron irrad., annealing 3=2848
$Au_{0.82}Hg_{0.18}$, structure rel. to at.% Hg 2=4435
Au—In system, diffusion props. below 155.4°C 4=22618
$AuIn_2$, elec. props. meas. 3=10718
Au—In—Cu, h.c.p. ζ-phases, axial-ratio changes 4=7618
$Au_3La_{0.8}Er_{0.2}$, magnetic cooling by adiabatic demagnetization 4=16305
Au—Mg films, vacuum deposition, orientation 3=20924
AuMg molecule, u.v. band spectra 0=20657
Au—Mn alloy, Curie temp. rel. to press. 4=26340
Au—Mn, —Fe, —Co, elec. conductivity 1=17605
Au—Mn, low-temp. transition 4=17650
Au—Mn, mag. props., Mn conc. depend. 1=2470
Au—Mn, mag. susceptibility and elec. cond. temp. depend. 0=4483
Au—Mn, martensitic transformations 2=6820
Au—Mn, new hexagonal phase between Au_4Mn and Au_3Mn 3=3312
Au—Mn, periodic antiphase structures 1=12646
Au—Mn, superlattices, magnetic props. 1=20065
Au—Mn system, magnetic properties 1=6386
AuMn, antiferromag. alignment in t_0 phase 2=23690
AuMn, mag. structure, neutron diffr. exam. 2=10683
AuMn(Mn), structure 1=5098
$AuMn_3$, paramag. susceptibility, 0°-1000°C rel. to composition 4=15627
Au_2Mn, Hall effect, effects of magnetic field and magnetization 1=10029
Au_2Mn, helicoidal antiferromagnetism 1=14763
Au_2Mn, magnetic structure 0=1818
Au_2Mn, structure, X-ray determination 0=720
Au_2Mn alloy, antiferromag. props. 3=1004
Au_3Mn crystal struct., atomic, tetragonal and orthorombic phases 4=13590
Au_3Mn, disordered and ordered, magnetic behaviour 3=1003
Au_3Mn, lattice modulation 1=15145
Au_3Mn, phase transformations, ordering, crystal structure, atomic 4=7494
Au_3Mn, structure study by electron diffraction 1=9146
Au_4Mn, Curie temp. change by hydrostatic pres. 3=11026
Au_4Mn, structure, by electron diffraction 1=11577
Au_2MnAl, Heusler alloy, ferromagnetism, -190 to 400°C 3=25520
Au_2MnAl, Heusler structure 4=4607
Au—Mn—In, mag. transition with composition 2=10682

Gold compounds—contd
Au–Mo, elec. res. and magnetoresistance 0=9942
Au–Nb, structure 1=6528
AuNb$_3$, Mössbauer absorption in superconducting state 1=18713
Au–Ni alloy, decomposing electron diffraction pattern, Lorentz effect 2=19093
Au–Ni alloys, creep at high temp. 2=18999
Au–Ni crystals, precipitation 1=6542
Au–Ni, decomposition, X-ray diffraction study 0=14075-6
Au–Ni, ferromag. precipitates, electron micr. study 3=5138
Au–Ni (50:50 at. %), hardening by heat treatment 4=23157
Au–Ni, heats of formation, 640°C 0=16343
Au–Ni, i.r. absorption virtual bound state model 4=1732
Au–Ni, inter-diffusion at large temperature gradients 1=7599
Au–Ni, nearest neighbour interact. energy 3=8886

Au–Ni, superparamagnetism and aging 2=2411
Au–Ni system, thermodynamics 2=23867
Au–Ni, X-ray small-angle scatt. from double Bragg reflections 1=7890
Au–Pb, distribution coefficient of Au 1=20629
Au–Pb films, diffusion 3=20226
AuPb$_3$, discovery and crystal structure 1=4067
Au–Pd, effect of plastic deformation on elec. resistivity 1=14360
Au–Pd, elec. res. and magnetoresistance 0=9942
AuPd, molecular dissociation energy 2=8128
Au–Pd, quenched-in vacancies 1=19762
Au–Pd, structure, short range order, persistance on cold work and heating 4=13645
Au–Pt, elec. and thermal cond., 2-90°K 0=6025
Au–Pt alloy, porosity and condensation of vacancies 2=23184
Au–Pt, precipitation 1=1428-9
Au–Pt system, Kirkendall effect and diffusion 1=14312-13
Au–Pt system, thermodynamics 1=20580
Au–Re alloy, elec. resist. at low temps. 4=22681
Au–Re, elec. resistance, pressure and temp. coefficients 1=19831
Au–Rh, elec. res. and magnetoresistance 0=9942
Au-rich alloys, thermal conductivity 1=920
Au–Sb, thin films, metastable phases 2=23865
AuSb$_2$, de Haas–van Alphen effect 3=12944
AuSb$_2$, elec. resist., thermoelec power, and Hall coeff. 4=15520
Au–Si complex deposits, electrical conductivity 3=20331
Au–Si alloy, eutectic composition 2=4450
Au–Si evap. films, structure 3=3354
Au–Si, formation of glass by cooling 1=6550
Au–Sn, prep. and props. 0=10334
Au–Sn, preparation, structure and props. 1=1455
Au–Sn system, electron diffraction studies 1=1455
AuSn, anisotropic thermoelec. power 3=17972
AuSn, de Haas–van Alphen effect 3=12944
AuSn, formation by vacuum alloying Au and Sn 0=10334
AuSn, molecular dissociation energy 2=8127
AuSn molecule, visible and near infrared spectra 4=6563
AuSn, structural, thermal, electrical and magnetic props. 4=7619
Au+Sn+Cd alloys, ζ-field lattice spacings 2=17037
Au–Sn–Fe, paramag. props., 300-700°K 4=15626
Au–Sn–Mn, paramag. props. 300-700°K 4=15626
Au–Sn–X, ζ-phase (X=Mn, Fe, Ni), lattice spacings and effective valencies 2=12935
AuSr, spectrum, vibr. analysis 3=19979
Au(15-40%)–Te alloy, cubic structr., metastable 2=10903
AuTe, molecular emission spectrum 3=12819
Au–Zn, de Haas–van Alphen effect 3=12944
Au–Zn, ϵ and η phases, lattice spacings 3=6856
Au–Zn, stacking fault probability meas. 1=7586
β-AuZn, spectral reflectivity rel. to temp. 2=18789
Au$_{3+}$Zn 1=11579
Au$_3$Zn[H] 1=11579
Au$_3$Zn [R] 1=11579
Au$_3$Zn R , study of superstructure 1=2542
Au$_3$Zn[R$_1$], Au$_3$Zn[R$_2$] and Au$_{3+}$Zn, crystal structure 4=1990
AuZr$_3$, structure 1=5098

Gold compounds—contd
Au$_3$Zr, structure 1=5098
Au$_4$Zr, structure 1=5098

Gramophones
See Sound reproduction.

Granular structure
aggregates, geometric props. 4=23541
alkali halides, intercrystalline energies 2=8804
alloys, intergranular segregation 4=4636
Armco iron, annealed, anomalous grain growth 0=14055
borosilicate glasses, by electron microscopy 3=13545
boundary movements, survey 2=14346
α-brass, grain size rel. to intergranular cavitation 4=30866
covering power of inequigranular powders 0=10325
density meas., bulk, Hg-displacement method 4=23540
diffusion of radioactive material, theory 2=12446
ferrites, rel. to elec. and mag. props. 3=1083
ferrites, micrographic structure 3=3122
ferrites, var. and growth 4=17832
fibre-textured metals, microstruct. changes during deform. 4=15803
grain boundary motion, impurity drag 2=21008
grain, single, X-ray reflection, intensity theory 1=20695
grain-size distribution, computation from micrograph 4=23512
granular masses, intergranular cohesion 1=20643
hydro-extruded 3=1215
intergrain creep cavities, metallographic technique 2=19098
α-iron, grain-growth kinetics 1=20608
large-angle grain boundaries, energy 0=6039
layer of steel balls, heat–mass exchange 0=12514
metallic optical film, reflection and transmission of light 2=5177
magnetic recording tape, particle interactions 4=13165
magnets, compacted Fe–Co particle, fracture surfaces, by replica 3=20920
mechanical strength, tensile 4=23106
metal films, rel. to optical props. 4=22817
metals, grain-size distribution 1=18520
metals, polycryst., plastic deform. theory 2=6733
packing density of ion-exchange beads 2=1130
packing of hard spheres 0=21223
packing of spherical particles, effect of material props. 1=6552
particle assemblies, stress–dilatancy relation 3=1363
photographic emulsions 2=7414
polycrystalline bodies, grain boundary and lattice diffusion 0=7901
porcelain 4=26699
porosity under shear stress, as for most random config. 4=17831
porous polycrystal, surface intergrain grooves 3=10683
rocks, consolidated, thermal conductivity 1=20651
sands, unconsolidated, thermal conductivity 1=20650
solids, meas. of density 0=6728
steel alloys, rel. to u. s. attenuation 2=8161
steel, effect on u.s. attenuation 0=726
steel, integranular fracture due to AlN 2=10771
steel, SAE 3140 and 4150, u.s. attenuation 1=902
subsidence trough, expected value 3=14073
surface determination by small-angle X-ray scattering 0=21222
unconsolidated aggregates, structure and props. 2=17062
wet granular material, gaseous diffusion 1=11588
X-ray meas. of grain size 1=2551
X-ray study, small-angle intensities from double reflections 0=4618
Ag thin films, light scatt. 4=22892
AgBr emulsions, tabular grains, lattice rotations 2=602
Al, polycryst., crystal orientation under axial strain 2=6741
Al, polycryst., rel. to residual press. effects 4=23120
Al powder compacts, x-ray line broadening and hardness 1=20644
Al–Al$_2$O$_3$ alloys, deform. induced substruct. 4=29163
Al–Mg deformed alloys 0=4686
Al–1¼% Mn alloy, grain size rel. to intergranular cavitation, 4=30866
Al$_2$O$_3$ abrasive grains, tensile strength rel. to size 1=20380
Al oxide films, anodically formed 0=4698
Au films, 2000-50 000 A, rel. to stress/strain curve 4=23575

Granular structure—contd
  Au, single crystals, surface effect on recrystallization 4=29055
  Au thin films, granulation phenomena, temp. depend. 0=16362
  $BaTiO_3$, anomalous crystallographic props. 4=23536
  Be, grain-boundary wetting by liquid Al-based phase 2=19088
  Be, structure modification by ultrasonic irradiation during arc melting 1=6545
  C, effect of heat treatment on elec. resistance 1=17633
  Cd, polycryst., rel. to flow under shear 4=23130
  Cu, annealed, anomalous grain growth 0=14055
  Cu, deformed, grain size effect on stored energy 2=2321
  Cu, explosively deformed, substruct. 4=29164
  Cu, rolled or stretched 2=6835
  Cu, substructure of annealed specimens, temp. var. 4=23525
  Cu—Al, explosively deformed, substruct. 4=29164
  Cu_3Au, shock wave effect on microstruct. 4=26508
  Cu—Fe, sintered, rel. to interphase energies 4=20789
  Fe, sub-grain structure effects on mag. props. 1=11437
  Ge, after rolling at 700°-800°C 4=23153
  LiF, bicrystals, grain boundary migration 4=23531
  Mg-Al-Be, intergrain creep cavities 2=19098
  MgO, bicrystals, boundaries interaction with slip bands 2=6754
  Mg-0.6% wt. Zr alloy, "blocked" microstructure 2=4515
  Mg-Zr, integrain creep cavities 2=19098
  Mn—Ni—Cu alloys, polygonization 3=3315
  Mn-Zn ferrites 0=3075
  Mo, grain boundary diffusion obs. 2=6371
  NaCl, boundary effect on plastic deform 4=23209
  Ni, impure, grain boundary diffusion, ridge formation 0=21224
  Ni, thermomechanical treatment effects 2=23777
  Ni, thermomechanical treatment effects 3=3234
  Ni—Cr, fracture, grain junction deform. 3=3239
  Ni—Fe alloy, cubically aligned, rolling textures 4=26698
  Ni-Fe cores at 400 cycles, grain size effects 2=12706
  Pu, substruct. metallography 4=29165
  Sb crystals, boundaries by etching with H 4=26693
  SiC, traps, meas. from elec. props. 2=14563
  Si—Fe, deformed, substructures and recrystallization 3=23468
  Si-Fe, effect of impurities on grain growth 2=10916
  Ta, 2°-2600°C 4=23489
  Ti, annealed, anomalous grain growth 0=14055
  U, quenched from β, γ phase temps. 2=4470
  U, recrystallized samples 2=12932
  U, size, u.s. waves, vel. and attenuation, meas. 4=29166
  U alloys, new electrolytic etching technique 2=4441
  U—Mo alloys, morphology of α pseudograin 4=29167
  UO_2, sintering in H_2 at 1350°C 0=8464
  W, doped wires, secondary recryst., rel. to temp. and heating rate 4=10588
  Zn, low-angle grain boundaries, mechanical and thermal stability 1=11218
  $ZnFe_2O_4$, growth and temp. effects 2=4479
  ZnS. ZnSe : Cu phosphors, luminescence and grain structure 4=13086
Graphite
  ablation, in O and air under flow conditions, 1000°-1400°C 4=29211
  abrasion by emery paper and its effects 1=1352
  action as lubricant, electron microscope study 0=10276
  adsorpt. of Al_2O_3, electron micrograph 4=23684
  adsorption of argon 0=21296
  adsorption of benzene, thermodynamic functions, calc. 3=18398
  adsorption of CO and water vapour 3=13569
  adsorption cross-section meas. in reactor 4=3757
  adsorption of gases 2=15096
  adsorption of H_2, D_2, CH_4, CD_4 2=4497
  adsorption of inert gases, dispersion energy calc. 4=13689
  adsorption of monatomic mols. 3=13572
  adsorption, physical, of Ar and Kr, theory and expt. 4=23592
  adsorption, thermodynamic quantities correl. 2=2432
  adsorption of xenon, argon 2=6856
  aerosols, as nuclear reactor coolants 1=17232
  annealed pyrolytic, single-crystal elec. characteristics 2=4035
Graphite—contd
  annealing, rel. to neutron irrad., e.s.r. study 3=22867
  arcback, dropless 4=11560
  atomic displacement from lattice, at 15° K energy threshold from e^-—bombardment 4=22647
  atomic stopping power for 1.1 MeV protons, rel. to diamond 1=12349
  atoms and lattice, repulsion of gas molecule 3=10030
  B diffusion 3=13060
  band structure and electronic props., review 1=4975
  basal dislocations, electron optical study 1=969
  bremsstrahlung, energy flux meas. 2=9819
  brominated, superlattice structure 4=4647
  brush contact, specific friction force 2=2339
  C films, graphitization 3=13395
  cast iron, graphitization on solidification 3=11300
  cavity growth and dislocation loops 1=14251
  compressibility, pyrolytic graphite 4=13411
  conductivity thermal, neutron effects, var. with irrad. and meas. temp. 4=6764
  contact props. on silicon 2=14544
  contact resistance, high press. and current effects 4=20331
  cooling curves, rel. to adsorbed A 3=3907
  corrosion by gases, thermodynamics 2=23956
  Coulson model and Shockley surface states problem 2=6310
  crack detect., CCl_4 radiopaque penetrant 2=23933
  creep, reactor-radiation induced 4=28955
  creep, at temps. up to 3000°C 0=16218
  creep, transient, and recovery, theory 3=18196
  crystal interstitial and vacancy loops on irrad. at high temp. 4=30558
  crystal orientation and anisotropy, X-ray exam. 4=13516
  crystal orientation, effect on (h, k) reflections 4=23446
  crystal preparation, single, from melts 2=2357
  crystal structure 1=20527
  crystal structure, effect on rhombohedral modification of oxidation, Br and K 3=18309
  crystal structure, graphitization, thermal expansion properties 1=10255
  crystal topography rel. to hear treatment in O_2, H_2, CO_2, 800°-1000°C 2=12884
  crystalline anisotropy by neutron diffr. 3=5101
  crystals, orientation, by X-rays 3=6820
  defect structure and electrical props. 1=17525
  deformation, rhombohedral form prod. 3=25627
  deformation by thermal cycling 3=23308
  de Haas-van Alphen effect, 3-85 kG 0=21020
  diamagnetic anisotropy calc. 1=3879
  diamagnetic props. rel. to particle size 3=1120
  diamagnetic susceptibility anisotropy, 2500° C to 2900° C 4=4324
  diamagnetism, energy levels of π-electrons 0=18159
  diamagnetism, theory 0=13730
  diamagnetism rel. to type of grinding 2=12755
  on diamond, after allotropic conversion at 3000° C, orientation 3=20776
  diamond, conversion, 130 kilobars, 3300°K 3=6819
  diamond formation by strong shocks 2=4360
  diamond surface, formation on due to heating in air 1=9106
  diffusion of B in, solid solution formation 0=20841
  diffusion cooling coeff. 0=17345
  diffusion of gases 4=233
  diffusion, high temp., of lanthanides, actinides 2=6370
  diffusion of Th, activation energy, pyrolytic C 4=6869
  dimensional changes, rel. to Br absorption 4=30808
  dimensional changes from bromine absorpt. and neutron irrad. 3=25309
  diphenyl-impregnated, thermal neutron diffusion length 1=5732
  direct conversion to diamond in static pressure apparatus 3=8793
  dislocation loops due to quenched-in point defects 0=17946
  dislocation loops after quenching and annealing 3=4861
  dislocation loops and self-diffusion, rel. to heat treatment 3=17741
  dislocation patterns, detailed analysis 2=6346
  dislocation ribbons and stacking faults 0=17941
  dislocation study 0=7886
  dislocations, electron microscope exam. of sheets 0=15843

Graphite—contd

InSb, microhardness anisotropy, by scratch method 4=1943
InSb, micro, faces, anisotropy 3=18217
In—Sb—Te alloys, microhardness 0=9978
KBr, microhardness, 4=6895
KCl containing F-centres, hardening on illumination 4=13392
KCl, electron and γ-irrad., hardening and F-band coloration 3=23359
KCl, hardening by colour centres 3=22833
KCl, hardening by quenching and irrad. of single crystals 3=16008
KCl, indentation and scratch hardness, surface soln. depend. 1=4001
KCl, pure Harshaw, γ-irrad. 4=10005
KCl, Sr^{2+} doped, γ-irrad. 4=10005
KCl—KBr mixed crystals, defects 2=3912
Li, microhardness, rel. to polymorphic transitions (1.5° to 300°K) 1=11508

Hardness—contd

- LiF, indentation hardness, effect of loading duration 4=26518
- LiF, radiation hardening, clearage made easier 2=2329
- $Li_2SO_4.H_2O$ 1=14396
- Mg, microhardness anisotropy 4=1955
- Mg_3Cd, hardening during annealing, isothermal 4=23176
- Mg—Cd, composition and temp. depend. 4=13424
- Mg cpds. microhardness rel. to latent heat of fusion 1=6484
- MgO, indentation hardness, effect of loading duration 4=26518
- MgO, rel. to irradiation 3=17761
- MgO, rel. to neutron-irradiation 3=18185
- Mg-0.6%wt. Zr alloy, precipitation hardening 2=4515
- Mn—Ti, rel. to phase transformation 1=10270
- Mo, irrad. hardening, rel. to grain boundaries 3=4881
- Mo, n-irradiated, increase on annealing $\leq 500^\circ$C 3=20730
- Na, polymorphic transform. 3=3224
- NaCl, Ca^{2+} doped, surface indentation meas. 4=23208
- NaCl, indentation and scratch hardness, surface soln. depend. 1=4001
- NaCl monocrystals, relation of microhardness to load 0=13919
- NaCl, quench hardening 0=15852
- NaCl, scratching along directions showing hardness polarity, rel. to dislocation distrib. 4=1962
- NaCl single crystals, microhardness rel. to applied load 4=17743
- NaCl, surface hardening, by X-rays 1=2398
- NaCl—NaBr alloys, microhardness 3=15993
- $Na_2O-B_2O_3$ glass, diamond pyramid hardness, rel. to comp. and heat treatment 2=10773
- Nb, cold worked, imperfections 0=13529
- Nb, neutron-irradiation hardening 3=11169
- Nb-base binary alloys, rel. to conc. 4=17813
- Nb—N crystals, with 0.9-1.3 at. % N 4=10032
- Nb—Sn, β—W phase, micro 4=26661
- Nb-V, Nb-Zr alloys, for reactors 2=4330
- 16% Nb—Zr alloy 475° - 575°C, rel. to $\beta \rightarrow w$ transform. 4=23281
- Nb—Zr alloys 3=19115
- Ni, before and after cold-working 2=10765
- Ni, and conductivity, electrical, changes on cold working 3=13373
- Ni, rel. to dislocation density, in strain 1=11209
- Ni, effect of cold working and annealing 4=13431
- Ni, effect of crystal props. and grain substructure 2=23791
- Ni, effect of electrolytic H 3=3245
- Ni electrodeposits, effect of annealing 4=30870
- Ni, micro, neutron effects, and phase transform. 4=23282
- Ni_3Al with Cr, Ti, Mo and W additions 4=23459
- Ni—Au, microhardness study, decomposition 0=14075-6
- Ni—Cr (21.4 wt%), micro, neutron effects, and K phase form. 4=23282
- Ni-Cr-Tl-Al, aging, including hardness 2=8854
- NiGa, grain boundary hardening. O_2-induced 4=17740
- Ni_3Pt, effect of short-range order and annealing 3=8906
- Pb, grain and twin boundary hardening, solute-induced 4=2014
- Pb, high-purity, solute-boundary hardening 4=28963
- Pb, on indentation, study 1=20389
- Pb and Pb alloys rel. to temp. 2=23792
- Pb—Bi alloys, rel. to composition 1=14923
- Pb—Cd alloys, rel. to composition 1=14923
- Pb—Hg alloys, rel. to composition 1=14923
- Pb—Na alloys, rel. to composition 1=14923
- Pb—Sb alloys, rel. to composition 1=14923
- $PbSe-Bi_2Se_3$ system, microhardness, rel. to composition 3=25742
- $PbSe-Sb_2Se_3$ system, microhardness rel. to composition 3=25741
- Pb—Sn alloys, rel. to composition 1=14923
- Pb-W technical alloys 2=23793
- Pt-W technical alloys 2=23793
- Pu—Al alloys, determ. for phase boundary position calc. 4=13440
- Pu—Ce alloys, determ. for phase boundary position calc. 4=13440
- PuC, 42-60 at.% C 3=10431
- $ReSi_2$ 3=872
- Sb, microhardness decrease, rel. to i.r. irrad. 3=18218

Hardness—contd

- SbI_3, micro 4=1624
- Sb—Se, condensate, composition depend. 4=23239
- SbTeI, micro 4=1624
- Sc, microhardness, anisotropy of single crystals 4=10143
- Sc (99% pure) microhardness 1=20427
- Se, rel. to state of crystallization 1=14967
- Si, microhardness anisotropy 4=10401
- Si, microhardness anisotropy 4=30778
- Si, microhardness and dislocation density 2=21028
- Si, microhardness, rel. to internal photoeffect 4=4463
- Si, micro, —200 to 1000°C, linear to exp. transition 4=13404
- Si monocrystals, microhardness rel. to dislocations 1=3675
- Sn(β) 4=29114
- Sn, effect of Na and Zn traces 3=3334
- Sn, recrystallized surface, effect of Zn and Na impurities 3=20760
- Sn and Sn alloys rel. to temp. 2=23792
- Sn, along tricrystal boundaries 2=4346
- Sn—Hg alloys, rel. to composition 1=14923
- Sn—Na—Al alloys, microhardness 0=18260
- Sn—Sb alloys, rel. to composition 1=14923
- Sn—Te—Al alloys, microhardness 0=18261
- Sn—Te—Zn alloys, microhardness 0=18261
- Ta, effect of electrolytic H 3=3245
- Ta carbide, microhardness, rel. to C content 4=13448
- Te(50-80%)—Ga, microhardness 3=11277
- TeI, micro 4=1624
- Th, neutron irrad. 2=16965
- Th alloys, hot hardness characteristics 0=18284
- Ti alloys, temp. depend. 0=4552
- Ti-base alloys, hardenability 4=23218
- TiC—WC—Co 3=3316
- TiC—WC—Co cermet alloys 1=6468
- Ti—Cr alloy, effect of heat treatment 3=20879
- TiI_4, microhardness decrease in i.r. illum. 4=7396
- TiN, rel. to chemical binding 1=14870
- TiN, rel. to chemical binding 1=20353
- TiO_2, micro, effect of non-stoichiometry 4=13441
- $TlAsSe_2$, glassy effect of I and Ge impurities 3=15635
- U carbides 4=13611
- uranium monocarbide 1=5953
- UC 4=13611
- UC, microhardness 3=7079
- UC, rel. to use as reactor fuel 2=12271
- γU—6 at.% Mo 3=25764
- U nitrides, microhardness 4=2093
- U—Nb(0.3-17.3 at.%), and metastable phases, quenching rate effects 4=13609
- UO_2, indentation expts. 2=19022
- V, var. with annealing temp. and deform. 3=5137
- WC, rel. to high press. and temp. 4=22592
- WC, microhardness, rel. to plastic deformation 4=4491
- W-Co alloy, surface microhardness rel. to stress effects 2=23780
- Y garnet 2=21449
- Y hexaboride, microhardness 0=1879
- Zn, effect of microsegregations 3=6792
- Zn, microhardness anisotropy 4=1955
- Zn, micro, effects of electrons, alphas, with and without Sn 4=23229
- Zn, strain hardening of single crystals 2=14896
- Zn—Cd alloys, age-hardening 4=1965
- Zn—Se, condensate, composition depend. 4=23239
- ZnSe—GaAs, micro-hardness measurements 0=729
- Zr, rel. to annealing and impurities 3=17745

Harmonic analysis

See Acoustic analysis; Calculating apparatus; Fourier analysis.

Hearing

See also Ear; Speech.

- absolute pitch identification 4=7998
- absolute pitch, origin 3=18678
- acoustic image lateralization judgments with binaural transients 4=23974
- acoustic reflex, for impulsive noises 0=6507
- acoustic transients, lateralization 3=3673
- acoustic trauma in guinea pig, resulting electrophysiological potential changes 1=4152
- action pot., 8th nerve, in cats 2=7069
- acuity meas., review 2=17317
- air puffs and pitch sensation 2=4898

Hearing—contd
aircraft sound, human reactions 0=813
amplitude discrimination by signal detectability, theory 1=12720
animal cochlear fluids, acoustical pressure transmission from airpath 4=13993
annoyance reaction to different motor vehicles 4=2481
apparent loudness, versus impulse duration 0=4824
artificial ear, acoustic coupling rel. to elec. impedance of receivers 3=3653
audibility limits, for freq. and tone-number variations in pulses 1=1611
audibility model, for architectural acoustics 4=14317
audibility of switching transients 0=3366
audibility thresholds, for different pulse lengths 0=18533
audible range division into critical frequency bands 1=7963
audio-frequency range subdivision 1=9219
audiogram average methods and SRT scores 4=15983
audiometer, Békésy, clinical and phys. uses 3=3669
audiometer calibration below 0.0002 μ bar 4=27271
audiometer, principles and history 3=16452
audiometric zero, international 4=29498
audiometry, rel. to calibration 4=20968
audiometry, precision and reproducibility
auditory adaptation, perstimulatory 1=1612
auditory density meas. 4=23972
auditory detection, interval of time uncertainty 1=9222
auditory detection, time uncertainty and waveform memory 1=9223
auditory facilitation following low intensity stimulation 0=12220
auditory fatigue, effects of extraneous tasks 4=23970
auditory intensive difference limen, influences 3=18675
auditory masking and the critical band 1=7959
auditory perception and unmasking 3=21167
auditory stimuli, effective onset duration 0=2049
auditory system, integrative and decay actions 3=3686
auditory threshold, binaural, free field norms 0=14335
auditory thresholds, effect of listener experience 1=11660
aural reflex 3=13960
aural reflex arousal 2=24202
backward and forward masking of probe tones 2=21758
backward masking, effect of masking stimulus duration 4=10969
backward masking, exper. study 0=2054
backward masking, monotic, dichotic conditions 2=24200
basila membrane, min. phase responses 2=4897
bats and people, use of sonic-pulse compression 4=15985
bats, use of u.s. pulse compression 1=9217
beat tones, neurological theory 3=13957
bell strike notes, objective explanation 2=19657
binaural-beat perception 4=2486
binaural click lateralizations, mapping 2=4893
binaural detection of single-freq. signals, effect of noise 3=7065
binaural and free field effects 4=10953
binaural hearing aids, improved speech intelligibility in noise rejected 1=9224
binaural, image localization with intermittent sources 4=15982
binaural interaction, Békésy model 3=3672
binaural interact. of click and click pair 3=16448
binaural interaction of clicks of diff. frequency content 1=4149
binaural, interaction of continuous sound and pulses 4=2485
binaural interactions 0=12222
biaural masking-level diffs., cancellation theory 3=21162
binaural masking level differences, equalization and cancellation 0=14338
binaural masking-level differences at high freqs. 4=15981
binaural signal selection 2=13217
binaural, speech, O, 90° phase diff. effects 4=26991
binaural summation of loudness 0=18539
binaural temporal resolution of clicks 4=10958
binaural, tentative model for localization, fusion and threshold shift 4=10952
bone conduction, compressional mode in cochlear 2=24197
bone conduction, review and work of Békésy 3=3668
brief signal, intensity, first neuron level 3=18677

Hearing—contd
British normal threshold, data for common earphones 1=9228
bullfrog, auditory units in eighth nerve 3=21170
cats, masking of tones by noise 3=9301
cats, medial superior-olivary-unit response patterns to clicks 4=10972
cats, thresholds 0=6505
clicks, forward and backward masking 1=4148
clicks from human scalp, response 2=4901
clicks, temporal masking by noise bursts 4=10959
cochlea, d.c. potentials and microphonics 2=7071
cochlea, frequency analysis, deviations from Ohm's law 2=7053
cochlear injuries in guinea pig, factor analysis 1=4152
cochlear model, hearing of some fundamental components 1=11657
cochlear potentials, effect of anoxia 1=6664
cochlear summation expt. 4=15974
cocktail party problem, binaural discrimination 1=11662
competing messages varied in no., rate, level 3=11623
complex signal detection 1=15370
comprehension of simultaneous spoken messages 3=1552
consonants, dimensions of perception 4=10964
critical band width 2=4896
critical bandwidth from masking thresholds 2=17322
DL's, cumulation for intensity change at low-sensation levels 3=18672
DL's, low-frequency, rel. to high-frequency-noise 3=18671
damage-risk criteria for pure tones and noise 3=1554
deafness surgery, rel. to middle-ear mech. 3=3666
detectability of tonal signals, depend. on interaural noise correl. 4=10961
detection of noise signal of varying duration 4=4980
detection of sinusoids of uncertain frequency 1=11658
detection tasks, correctness of response 1=12718
dichotic clicks, temporal order and loudness perception 3=13951
difference limens, for decaying noise-band pulses 0=18540
differential intensity sensitivity 0=12219
differential intensity thresholds, differences for clicks 3=18676
differential threshold, in presence of contralateral sound 1=1608
diplacusis and auditory theory 4=4983
directional characteristics, monaural 0=6504
directional, effect of oxygen intake, reduced blood flow 3=21148
directional, energy theory and stereophony application 0=12223
discrimination, comb. of frequency and intensity differences 1=12717
discrimination of Czech in cinemas 1=1604
discrimination of freq. response patterns 2=4900
discrimination, of time interval acoustic between pulses 0=21407
duration of acoustic signals, discrimination 2=13215
earphone centring, effect of switching channels 2=24207
ear-protecting devices, noise atten. 3=16453
ear protector attenuation, variations 0=3370
echo location, pitch versus distance meas. for refl. 4=21246
echo perception criterion, signal-echo correlogram 0=16506
echo-perception, post-stimulus masking 1=1610
effect of arm movements and body position 0=6500
effect of diffraction of sound around human head 0=1003
effects of atmospherics 1=15241
electrolucephalograms, frequency measure 0=16509
endocrinic system, effect of noise, guinea-pig data 0=6501
equal loudness curves 0=2050
"exploring tones" 0=6508
exposure, repeated, to high-intensity sound, effect 4=23973
fatigue, auditory, from audio analgesia 2=11215
fatigue index, use of intensity discrimination threshold 2=7062
field work, mobile audiometric laboratory 4=29720

Hearing—contd
- forced-choice and phenomenal-report thresholds, prediction 0=8441
- foreign accent and speech distortion 3=13949
- frequ. and amplitude modulations, sensations comparison 3=3671

- thermal diffusivity, meas. by flash-method, temp. and finite pulse-time effects 3=16819

Heat transfer—contd
thermal diffusivity, meas., heat-wave methods 3=16818
thermal diffusivity meas. at high temps. 3=9634
thermal insulation at low temps., evacuated powder method 0=19575
thermal regular regime, theory and application 1=18648
thermal source, nonideal, power available 1=16181
thermistors, natural and forced convection together 4=27355
thermoacoustic streaming 0=8755
thermocouple circuit, as Peltier cooler, under steady currents 1=2902
thermodynamic coupling bet. heat and mass transfer in free convection 4=340
thin bodies, internally heated, cooled by convection and/or radiation 2=22079
thin fins, effect of internal heat generation 1=18650
Tian–Calvet microcalorimeter 2=11527
transformation, mathematical, Mollier to enthalpy—composition diagram 4=8531
in transformer oil, transient phenomena 3=11965
transient, average bulk temp. formulae 4=11383
transient flow, Wiener–Hopf problems, approx. 0=864
transient state, perturbation method 1=4491
in transition boiling domain, from horizontal surface 4=29784
transport coefficients in resistive medium, correl.-function, proof 4=27347
from tube bundles, to parl. water flow 0=14868
tubes and coils, elec. heated 0=19474
turbulent boundary layer, Spalding function 2=15770
turbulent, in circular tube 3=19035
turbulent compressible flow, with addition 2=19741
turbulent convection, between parallel planes 0=8620
turbulent exchange in air near ground 1=1509
turbulent field, velocity rel. to temp. 3=11969
in turbulent flow 3=7186
turbulent flow of fluids with var. properties, and frictional resistance 4=18457
in turbulent flow, in tubes, Reynolds analogy 0=19070
in turbulent gas flow, effect of gas-injection 3=23919
turbulent, heat eddy diffusivity near wall 4=16273
turbulent liquid metals, in channels 0=14869
turbulent, from point source with boundary layer flow, meas. 4=11149
in turbulent region, transfer coeff. 1=1836
turbulent small-scale flux in atmosphere 1=20821
turbulent vortex, flow and energy separation analysis 1=18375
turbulent wakes behind rotating bodies 2=15775
2-dimensional flow eqn., numerical soln., linear and nonlinear 0=3667
Ukranian clays 0=8823
unilateral, liquid metals flowing in annuli 3=7366
unsteady state problems, electrical analogues 1=2898
viscous gas flows 3=24122
in wake of rectangular cylinder 4=29580
water, subcooled, boiling, crit. thermal load 2=9455
water, in turbulent vortex flow 0=6977
wire, in boundary flow about cylinder 2=15773
Ar arcs, high-intensity, anode 3=7483
Ar, liquid 2=6269
Ar plasma jets 0=2371
Ar—W accommodation 4=29674
CO_2 near critical pt. 3=21589
Cu and Ni wires, thermal relax. rel. to current and surrounding gas pressure 2=14398
Cu, nucleate boiling, effect of surface config. 4=2862
Cu thermal link to CrK alum, 0.03° to 0.15°K 1=16141
H_2 gas flowing in tube or annular space 1=6973
H_2, liquid, thermal exchange coeffs., forced convection 3=16605
in $H_2 + 2O_2$ explosions 0=14110
H_2O, boiling, from Ni wire in subcooled and boiling water 4=11417
H_2O, from fine Pt wires, effect of ionic currents 4=8200
H_2O, saturated and subcooled, boiling at coexistence of nucleate and film regions 4=27379
H_2O, subcooled, surface boiling under free convection 4=27380
He, boiling 3=9671
He, from thin cylinders, expt. rel. to theory 4=8515

Heat transfer—contd
between He II and copper 0=226
He II, heat flush and ion mobility 0=8900
He II, length effect 0=8911
between He II and solids 0=8917
He II and solids 1=13034
He II, turbulence when heat current applied 3=21642
He^3, liquid or solid, thermal boundary resist. with Cu or epoxy resin below 1°K 4=27404
He^4, solid, thermal boundary resist. with Cu below 1°K 4=27404
by He^4 II, through narrow slits 0=8910
to Hg in circular tube and channels, with sinusoidal heat load distrib. 1=18644
Hg flowing in steel tube 1=8250
Hg flowing in steel tube 1=10616
Hg and metal surface, thermal contact resistance 1=18646
In—sapphire boundaries, thermal resist., for supercond. and normal In 4=28385
in N_2, boiling, from Cu and Pt wires pressure variations 0=1050
Na–K eutectic, turbulent flow local heat transfer coeffs. 0=12409
Na, liquid, high temp. properties 0=3526
Na, liq., in metallic tubes, meas. 3=3909
from Na, molten, in staggered tube bank crossflow 3=16816
Na oleate, boiling at coexistence of nucleate and film regions 4=27379
Ne, liquid, coeffts. meas. 4=8201
O_2, dissociated 1=6878
Pt and Ni wires to boiling water, depend. on wire surface 4=2894
from Pt wires, heated over boiling helium 0=3696
U rod, transient temperatures 1=772
W surface, 1710-2500°K, in cold gases 3=24078

Heat treatment
AB_3-type superlattice, magnetic, rel. to directional order 2=8850
Alcomax III, effect on ferromag. props. 2=10656
alkali halide crystals, irradiated, rel. to stress/strain relationships 3=22649
alkali halide mixed crystals, effect on props. 0=12075
alkali halides, annealing, colour centre formation 0=11629
alkali halides, Cu impurities penetration of lattice 3=6667
alkali halides, rel. to light scattering 4=28712
alloys, annealing, recrystallization 1=11585
alloys, f.c.c., effect on faulting 2=8232
alloys, ordering processes, mag. annealing 0=1941
alloys, below recrystallization temp., and elastic consts. and struct. 4=20630
Alnico, effects on mag. props. and crystal structure 4=1830
Alnico V 0=10329
Alnico 5, effect on temp. depend. of elec. cond. 1=14355
Alnico, mag. props. and structure 4=13166
Alnico—Cu, effect on mag. coercivity 4=17645
annealing of disordered metal films, energy 1=20597
annealing effect on defects from coalescence of twin layers 4=25930
annealing, effect on prismatic dislocation loops 1=967
annealing furnace, electron cloud 3=5136
annealing, in high vac., optical heating system 0=14900
annealing, investigation by damping capacity 1=10206
annealing, isothermal of metals after heavy-particle bombard. using liq. nitrogen cryostat. 4=8488
annealing kinetics, interstitials and vacancies 2=21004
annealing, large temperature range 0=18386
annealing of Permalloy films, effect on mag. props. 1=7755
annealing, prod. of mag. anisotropy in Ni—Co and Ni—Fe alloys 1=17951-2
annealing, transf. from cold-worked state, rel. to recrystallization 1=1370
anthracene, effect on free carrier photogeneration 4=22809
austenitic alloys, thermomechanical effects 2=23885
brass, effect of external stresses during annealing 4=20649
α-brass, effect of low-temperature annealing on hardness and structure 1=1431-2
α-brass, order—disorder phenomena 1=1418-20
brasses, and elec. resistivity, abnormal, criticism of conclusions 3=15535

Heat treatment—contd

- brittle materials, thermal shock behaviour 1=11172
- bronze (15% Al) rel. to short-range order 2=10906
- bronzes, Al and elec. resistivity, abnormal, criticism, of conclusions 3=15535
- calcite, change in luminescence polarization 2=6598
- carbon iron sheet, annealing and deformation, causing abnormal grain growth 4=13651
- carbon steel, annealing, mag. props., square loop charac. 1=2471
- ceramics, and microstruct. bi-phase equilibrium rate, diffusion 4=23524
- ceramics, volume and mechanical strength changes rel. to annealing 4=10374
- chlorophacite, effect on mag. props. 3=1499
- coercive force, temp. variation after heat treatment 2=737
- corundum, annealing boules 1=20324
- creep-resistant materials, thermal cycling stresses 2=21447
- cryostat for low-temp. studies 1=13030
- crystals, point defect annealing kinetics, diffusion eqn. 4=6826
- defect self-healing at high temp., mechanism and kinetics 4=12744
- diamond, semiconducting, elec. resistivity changes 0=4357
- diamonds, effect of annealing on cathodoluminescence 1=1184
- effect on magnetization in Rayleigh region 0=16131
- effect on photocond. of CdSe 2=10531
- Elinvar, effect on shear mod. and Curie point 1=7812
- Elinvar Ni-Fe-Co alloys, 2.5% Ti 0=3012
- Esaki diodes, hump structure due to electrons 2=23428
- eutectic, quenched ideally, degree of non-equilib. 3=13533
- excitation, slow neutron beam study 4=3990
- ferrites 0=13822
- ferromagnet, rel. to Barkhausen noise 3=3104
- glass, annealing as co-operative process 2=10925
- glass, crystal growth and light effects 4=23340
- glass, effect on breaking strength 4=4464
- glass fibres, and mechanical strength 4=23154
- glass, infinite plate, tempering stresses 2=793
- glass, oxide, densified at high pressure 4=13409
- glass, Pb, γ-irrad., and light transmission loss reduction 4=22861
- glass, rel. to toughening 3=3229
- glass, Young's modulus rel. to refr. index 4=22864
- glasses, photosensitive, X-ray effects 3=8478
- glycine sulphate, rel. to ferroelectric domain growth 2=4094
- graphite, annealed after irradn. 4=1466
- graphite, annealed and n irrad., elec. props 4=30605
- graphite, annealing of electron irrad. damage 0=20854
- graphite, annealing, rel. to neutron irrad., e.s.r. study 3=22867
- graphite, annealing of neutron radiation damage 1=14348
- graphite, crystal topography in H_2, O_2, CO_2, 800°-1000°C 2=12884
- graphite, rel. to dislocation loops 3=17741
- graphite, dislocation loops due to quenched-in point defects 0=17946
- graphite, effect on stored energy due to neutrons 2=18573
- graphite, electron irrad. effects, annealing 3=10615
- graphite, interstitial monolayer disks, rel. to annealing 4=12727
- graphite, irrad., annealed, hardness 2=23766
- graphite, irrad., annealing mechanism 2=23844
- graphite, neutron-irradiated, defect annealing 2=3973
- graphite, pyrolytic, annealing under pressure 4=4523
- graphite, pyrolitic, effect on thermal expansion 4=25863
- graphite, pyrolytic, neutron irrad. 2=614
- graphite, quenching and annealing, dislocation loops 3=4861
- graphite, quenching, annealing, vacancy loops 2=6346
- graphite, thermal cond. rel. to defect structure 4=1415
- graphite, thermal cycling growth 2=23807
- graphite, vacancy loops, rel. to annealing 3=17705
- hexahalogen complexes of Pt elements, cryst., annealing, thermal, of chem. radiation damage 4=12822
- ice, disappearance of H atoms generated by γ-rays 2=14479
- ice plates cracking from thermal shock 4=1947
- Invar, isothermal holding, magnetodiffusion effect 3=3216

Heat treatment—contd

- ionic crystals, annealing effect on optical properties 4=28442
- ionic crystals, Rn^{222} and Xe^{133} labels, release 3=823
- isochronal annealing studies, expt. results 4=30587
- isothermal annealing of radiation damage in Szilard-Chalmers reaction 0=2837
- kaolinite, X-ray diffraction study 0=4666
- liquids, solns., pure on alkali halide crystals 2=9250
- luminescence during annealing of crystals 1=7731
- and magnetic after effect, soft materials 4=17636
- magnetic anisotropy prod., constants F and G 2=23654
- magnetic films, hypercritical hysteresis loops 4=13156
- magnetic, review 4=22941
- magnetic, rotary field, anisotropy prod. in Ni ferrite 3=15892
- metal films, quench-condensing and elec. props. 2=23242
- metal films, resulting conductivity anomalies 1=6561
- metal wires, quenching in He II 4=23997
- metallic samples, vacuum ovens 1=13017
- metals and alloys, vacancy precipitation, rel. to annealing, review 4=12733
- metals, annealing, grain growth 0=14055
- metals, annealing, internal friction 0=13532
- metals, annealing, recrystallization 1=11585
- metals, cold worked b. c. c., effect of interstitials on recovery 4=10362
- metals, defect annealing, theory 2=12415
- metals, deformed, crystal dislocation var. equn. 4=12747
- metals, deformed, Frenkel pairs recomb. theory 4=15471
- metals, f.c.c., annealing rel. to Bordoni peaks 3=23298
- metals, f.c.c., rel. to dislocation distrib. 2=6335
- metals, impure, vacancy annealing, theory 0=17957
- metals, irradiated, point defect cluster annealing 2=12416
- metals, neutron-irrad. at 4.5°K, annealing analysis 4=12821
- metals, noble, deuteron and neutron damage 2=12474
- metals, point-defect annealing, theory 3=22727
- metals, pure, mono and divacancies, annealing theory 2=12423
- metals, quenching strains effect on retained thermal defects 4=1462
- metals, recovery from irrad. damage 4=1533
- metals, below recrystallization temp., and elastic consts. and struct. 4=20630
- metals, study using emission microscopy with ion-released electrons 0=15080
- metals, vacancy annealing in slightly impure samples, theory 1=8903
- metals, variation of toughness with time and temp. 0=21149
- mica, and spectrum, muscovite sheet 4=10181
- molecular crystals, annealing method 1=14227
- Nichrome, K-state formation, tensile strength 1=12584
- Nimonik-type alloys, ageing rel. to structure changes 3=16113
- noble metals, recovery 3=23345
- nylons 6-6 and 6-10, low temp. dielec. loss, influence 1=17822
- pentaminebromo complexes of Pt elements, cryst., annealing, thermal, of chem. radiation damage 4=12822
- Permalloy, cold rolled, heat treated, anisotropy 2=12702
- permalloy, rel. to electrical and magnetic properties 1=15119
- Permalloy films, annealing, effect on mag. props. 1=6320
- Permalloy films, mag. 4=20549
- Permalloy, gold added, coercive force control 2=12734
- Permalloy, in mag. field, effect of oxygen 0=10330
- Permalloy, and mag. initial susceptibility and elec. cond., stress effects 4=7282
- Permalloy, thermomagnetic treatment, influencing factors 0=18187
- 2V Permendur, mag. annealing method 2=12704
- phosphates, neutron irrad. annealing 3=22872
- polyethylene, annealing after drawing, light scatt. study 1=20641
- polyethylene, annealing, surface mass defect effect 4=7561
- polyethylene, effect on lamellar thickness, melting temp. and density 4=15809
- polythene, γ-irradiated, X-ray study 0=4681
- polyethylene, rel. to X-ray line broadening 1=20697
- polyvinyl alcohol film, rel. to gel formation 4=10664
- polyvinylchloride, electrification 0=16008
- powdered solids, shock-excited, spectroscopy 3=24018

Heat treatment—contd

precipitation alloys, in mag. field, particle growth, shape 2=12934
quartz, annealing-out of radiation defects 2=20987
quartz, annealing of X-ray damage 3=6555
quartz, effect on luminescence and coloration 0=16089
quartz, H-containing defects, i.r. spectral obs. 2=6320
quartz, smoky, effect on spectrum absorption bands 4=1742
quenching of metal wires, elec. heated, in liquid He II 4=14475
quenching of metals, oriented void formation 4=20291
quenching, Ni–Co alloys, effect on magnetic annealing 3=8681
quenching, prod. of dislocation loops 2=14438
quenching, 20 000 deg C sec^{-1}, microscopy 3=18683
quenching, vacancy props., thermo e.m.f. study 1=14255
real solids, resulting change of shape as limiting case of eqn. of state 2=3851, 8178
rocksalt, annealed, neutron irrad., mech. props. 0=18242
rocksalt, effect on (100) faces 0=8213
rocksalt, healing surface defects 0=17924
rock salt, (110) face annealed, rel. to light scatt. 2=8491
rubber, crystal growth, low temp. 4=23347
rutile, paramag. Ti^{3+} centre formation 2=23633
semiconductors, introductory lectures 4=30615
semiconductors, review 4=28297
silica, vitreous, annealing density changes due to neutron irrad., frequency factors 1=7606
single crystals, rel. to residual stresses, "anomalous" distrib. 4=10358
solid semi-infinite conductors, thermal diffusion eqn. 2=4870
solid solns., annealing temp., rel. to cellular precipitation, Turnbull theory 4=10415
solid solns., quenching defects 3=8909
spark hardening of metals 1=1625
stacking-fault tetrahedra, irradiation-induced annealing 4=4065
steel, ageing 1=6537-8
steel, ageing, effect of absorbed hydrogen 1=6539
steel, ageing effects 4=29009
steel, annealing, rel. to deformation recovery 4=4462
steels, austenitic, rel. to NbC precip. 3=18359
steel, austenitic, second kind ordering 0=18397
steels, C and Cr, austenitic transformation, white layer formation 4=23269
steel, case-hardened layer, substructure 3=1247
steel, cast C, magnetic props. 0=4485
steel, deformed and quenched, recrystallization 2=12930
steel, destructive fatigue elimination 3=25643
steel, effect on fracture delay time 4=10385
steel, effect on physical properties 1=10071
steel, extra-soft, quenching and ageing effects 3=16111
steel, fast tempering, phase transformations 1=12644
steel, rel. to hardness and dislocation density 2=16656
steel, internal friction 0=1849
steel, internal friction, nature of peak 1=10207
steel, low-carbon 0=1860
steel, mild, brittle-ductile transition effects 2=6824
steels, Mn–V, phase transformations 2=6827
steel, precipitation changes, electron microscope study 0=14095
steel, quenching, internal friction 1=3963
steel, residual austenite, temper ageing 1=15138
of steel sections of vacuum chamber, proton synchrotron 4=14834
steel, stainless, cycling speed effect on thermal fatigue 4=23211
steel, temper temp. effect on hydrogen diffusion and solubility 1=6117
steel, thermal cond., electron–phonon ratio 0=7861
steel, transformer, 2-4% Si, carbide formation and coercive force 3=16101
steel, Type E310, mag., effect of field on hysteresis and mag. curve 3=20584
steels, austenite formation, rapid X-ray anal., recording apparatus 4=23270
suspensoids, eqns. 2=4565
tempering, kinetics of first stage 0=15850
thermal fatigue investigation by microhardness meas. 2=23794
thermal stress ageing law 4=7390

Heat treatment—contd

thorianite, fragmentation, due to internal He 0=4579
transition metals, rel. to embrittlement 3=8784
Ticonal G magnet steel, magnetic annealing 1=6342
vacancy annealing in metals, effect of interaction with trace impurities 4=30555
vacancy prod. in pure metals 4=30593
Zircaloy-2, heat and annealing effects at high temps. 4=26534
Zircaloy-2, recovery after annealing 3=11170
Zircaloy-2, reduction of corrosion and hydrogen embrittlement 4=10994
Zircaloy-2, structure transformations 2=4460
Zircaloy and Zr–Nb alloy, dimensional changes in temp. gradient 4=20691
Ag annealing of dislocations 3=22779
Ag, annealing, effect on thermal expansion 2=20938
Ag, cold-worked, dislocation structure, annealing processes 0=20822
Ag, cold-worked, stored energy release on annealing 3=11173
Ag films, optical absorpt. 2=21246
Ag, O$_2$ in soln., at different quenching temps. 2=12928
Ag, proton irrad., 10 MeV, stage III recovery 4=10011
Ag, quenching and annealing of point defects 2=23152
Ag, quenched, annealing of vacancies and vacancy aggregates 4=12734
Ag, quenching, and divacancy binding energy 4=22562
Ag, quenching after heating in air, lattice defects 4=6823
Ag, quenching of lattice vacancies 0=13549
Ag, quenching, point defects meas. 2=18570
Ag thin films, rel. to optical properties 3=13146
Ag wires, cold-worked and annealed 2=4335
Ag, wires, rel. to internal friction peaks 3=18166
Ag–Al alloys, ageing, anomalous resistivity increase 0=17994
Ag–Al alloys, single crystals, plastic deformation 0=21133
Ag–Al alloys, supersaturated solid soln., prep. by quenching 0=21238
Ag–Al, effect on faulting 2=8232
AgBr:Ni, bleaching 3·13187
Ag–Cd alloys, annealing spectrum of cold-worked specimens 4=23290
Ag–Cd, dislocation damping 2=15062
AgCd, order–disorder transformations 3=3328
AgCl, annealing in O$_2$ and air, hole migration 1=1110
AgCl, annealing and quenching, ionic cond. 2=3982
AgCl, annealing, rel. to stress release in plastic deformation 1=11505
AgCl, rolled plates, annealing, dislocations and etching 1=4016
AgCl single crystals, with internal print-out, MgO annealing 0=6343
Ag–Pd alloys, electrical props., effect of annealing 4=22684
Ag–Zn, quenched, thermal vacancies formation and decay 4=6828
AgZn and AgCd, accelerated ordering and hardening by thermal cycling 4=23289
AgZn, annealing kinetics rel. to vacancies 2=10408
Ag$_2$Se films, annealing 0=16363
Al, annealing of dislocation loops 1=19777
Al, annealing effect on Bordoni peaks 4=1927
Al, annealing of radiation damage 3=22860
Al, annealing, recrystallization and polygonization 3=3335
Al, annealing, single crystal formation, substructure 4=26590
Al, annealing, stored energy and elec. cond. 1=17508
Al, cold-worked, effects of single and successive isothermal heating 2=10914
Al crystals, rel. to recrystallization–polygonization competition 4=23327
Al, deuteron irrad., isothermal annealing 3=13021
Al, and dislocations and impurities distrib. 4=20278
Al, divacancy binding and migr. energies 4=15468
Al, effect of annealing on dislocations 1=14273
Al, effect on plastic flow stress 1=6452
Al, effect on sub-grain structure 1=9109
Al, fatigue damage, crack formation, intermediate annealing effects 0=21120
Al, internal friction 0=1849
Al, neutron-irradiated, annealing kinetics 1=1003
Al, polycrystalline, rel. to Hall field and resistivity, 20°K 3=4907

Heat treatment—contd

Al, precipitation hardening, effect on supercond. 2=2956
Al, quench hardening 0=4570
Al, quenched, aged defects 3=10667
Al, quenched, dislocation loops 4=6840
Al, quenched, dislocation loops, annealing processes 0=20806
Al, quenched, effect on defects 2=23230
Al, quenching, dislocation interaction and stacking faults 4=12757
Al, quenching, dislocation loops 0=20810
Al, quenching, temp., effect on internal friction 3=15976
Al, quenching, vacancy generation and fall of elec. resistivity 1=6105
Al, recrystallization inhibition by polygonized struct. 4=2332
Al sheet, rolled, annealed, hardness anisotropy 3=3246
Al single crystal plates, annealing effects 1=14881
Al, single crystal plates, annealing, elasticity 0=8106
Al single crystals, annealing 4=15701
Al single crystals, recrystallization effect 4=23325
Al, very pure, quenching in air and water, elec. cond. to 4·2° K 1=17510
Al wires, and polygonization, from tensile testing 4=1925
Au–1.2 at% Ag, quenching studies, rel. to vacancies 2=10379
Al–Ag solid solns., quenching and lattice spacings 2=6838
AlAgCu alloy prep. by strain-anneal method 3=23394
Al alloys, annealing of radiation damage 3=22860
Al alloys, quenched, ageing 2=10915
Al alloys, quenching, dislocation sources 1=966
Al alloy, rel. to specific heat down to 1.8°K 2=6281
Al alloys, vacancy trapping by quenching 1=17511
Al binary alloys, with Cu, Ag, Zn, Mg. quenching defects 0=20797
Al–Cu alloys, ageing by step quenching, fractional nucleation 0=18388
Al–4·5% Cu, deformation after various treatments 1=20369
Al–Cu alloys, effects of quenching on precipitation 0=21239
Al–Cu, Guinier–Preston zones 3=8876
Al–Cu alloy, hypo-eutectoid structure, effect of quenching and tempering 2=10913
Al–Cu (4%), quench aging, electric current effects 4=7407
Al–Cu, rel. to u.s. attenuation 2=3832
AlCu, age hardening, X-ray diffr. effect 2=15064, 19103
Al–Fe alloys, annealing, ferromag. quenching 1=15129
Al–Fe alloys, low coercive force production 0=10131
Al–Fe magnetically soft alloys 1=6270
Al–Fe alloys, short-range order 2=2398
Al–5% Mg alloy, internal friction, effect of quenching 1=2507
Al–0.5 at. % Mg, quenching, annealing dislocation loops development 2=8216
Al–Mg–Si sheet, recrystallization 3=6869
Al_2O_3, γ-irrad. and unirrad., defect annealing 2=12463
AlSb crystals doped with O 1=17712
Al–Si, quenched, pptn. nuclei concn. 3=18355
Al–Zn, conductivity changes and Mg impurity/vacancy interaction 4=12725
Al–Zn (10-98 wt.%), cycling, and internal friction and elongation 4=13389
Al_2O_3, with 1 wt.%Zr, dislocations after annealing 3=12976
Au, annealed, struct. expansion and thermal defect existence 4=30554
Au, annealing, influence on internal friction 4=4466
Au, annealing of quenched-in defects, energy evolution 0=4288
Au, annealing after quenching, aggregate vacancies 3=4864
Au and Au–Mn glasses, electron irrad., multi-colour formation 4=17462
Au, cold-worked, annealing effect rel. to resistivity 4=7428
Au, crystal vacancy clusters, on n irrad. or quenching, annealing effects 4=4038
Au, deuteron irrad., isothermal annealing 3=13021
Au, electron irrad., low-temp. resistivity recovery 1=11256
Au films, annealed after ion irrad., defect behaviour 4=1489
Au, neutron irrad., isochronal annealing 3=2848
Au, proton irrad., 10 MeV, stage III recovery 4=10011
Au, quench-hardening and resoftening 0=21150

Heat treatment—contd

Au, quenched, annealing of vacancies and vacancy aggregates 4=12734
Au, quenched, effect on defects 2=23230
Au, quenched, high-temp. anneals 4=25925
Au, quenched from < 700°C, elec. resistivity recovery 2=6409
Au, quenched in vacancy annealing kinetics 4=20266
Au, quenching, effect on elec. cond., +20° to −196°C 2=23235
Au, quenching experiments 1=961
Au, quenching-in and annealing-out of vacancies 4=6829
Au, quenching, vacancy precipitation 0=17952
Au, recovery, point defect mechanism 2=23153
Au thin films, end of annealing 4=23577
Au, thin films, rel. to optical properties 3=13146
Au thin films, rel. to structure changes 4=23578
Au, vacancy annealing, pressure effects to 10 000 kg/cm² 1=8904
Au wires, quenched, annealing kinetics, effect of Ag impurities 1=14256
Au–Al layered films, diffusion study 2=6364
Au–Ag alloys, conductivity, electrical, changes due to ordering 3=22894
Au–Ag, explosive, study by microhardness 4=13410
Au–Cr alloys, annealing and quenching rel. to magnetic props. 1=20162
Au_3Cu, annealing and quenching, elec. cond. 0=17997
Au–0.25 at % Hg, neutron irrad., annealing 3=2848
Au–Ni (50:50 at. %), hardening 4=23157
B, 4% in irrad. steel, annealing behaviour 2=23224
Ba films on Cu, work function 1=13097
$Ba_{1-x-y}Sr_xPb_yO.6Fe_2O_3$, mag. props. 4=23015
BaF_2, effect on e.s.r. of Gd^{3+} 4=1877
$BaTiO_3$, annealed, elec. cond. 2=18645
$BaTiO_3$, annealing of mechanically-shocked crystal 4=1495
Be, annealing, after irradiation, mechanical props. 2=4338
Be, commercial, structural changes 3=11290
Be, effect on types of recrystallization 2=19032
Be, and mechanical properties, 600°C, impurity effects 4=7667
Be, 650°–800°C rel. to ductibility 2=8210
Be alloys, and microstructure 4=7667
Be–Fe, and microstructure 4=7667
Be–(0.4 wt%) Fe rel. to overaging, 700° to 950°C 2=4341
beryllium oxide 2=4337
BeO, annealing after irrad., point defects 4=12722
beryllium oxide, cavities, bubbles 2=4517
BeO irradiated, annealing 1=19823
BeO, irradiated, He diffusion, from specific heat, below 4°K 3=15509
BeO, n irrad., effect on thermal cond. changes 4=6762
BeO, sintered, rel. to reflection coeffs. 4=28671
Bi, irreversible from changes during thermal cycling 2=8728
Bi_2Te_3, annealing, effect on elec. props. 2=18697
Bi_2Te_3, point defects, thermal annealing 3=22712
C, granular aggregates, effect on elec. resistance 1=17633
C, pyro, diamagnetic props. and crystal structure 3=20949
CaF_2, annealing effect on X-ray line-broadening 4=23523
CaF_2, rel. to rare earth ion e.s.r. 4=26425
CaF_2 single crystals, annealing 1=10239
Cd, thermal cycling, elec., mechanical props. 2=23776
Cd, thermal cycling, elec., mechanical props. 3=3233
Cd-Bi alloys, thermally cycled, dimens. growth coefficient 4=28376
CdS, annealed in vacuum and S vapour 0=18068
CdS, annealed in various atmos., photocond. 1=12459
CdS, annealing, effect on real structure 3=11262
CdS, annealing in various atmos., thermally-excited currents 1=14463
CdS, films, defect annealing, effect on elec. props. 2=2160
CdS, ionization energies and electron trap depths 2=4060
CdS, rel. to photosensitivity and luminescence 3=17954
CdS, sintered film, effect of O on photoconduction 1=12458
CdS:I, effects on photocond. and Hall effect 2=6495

Heat treatment—contd
- Cd—Sn alloy, density variation under thermal cycling, to 250°C 3=6868
- Cd—Zn alloy density variation under thermal cycling, to 250°C 3=6868
- Co, deformed, Frenkel pairs recomb. 4=15471
- Co, h.c.p., annealing, effect on stacking fault probabilities 4=22602
- Co, mag. annealing 1=12533
- Co, mag. annealing anisotropy 1=20082-3
- Co, in a mag. field 4=4352
- Co, stress annealing, mag. orientation 2=4229
- Co–Cr–Fe alloy, rel. to structure 2=2395
- Co–Fe alloys, mag. anisotropy 0=13767
- $Co_xFe_{3-x}O_4$, mag. annealing, effect of cation vacancies 1=14703
- Co—Fe—V alloys, annealing, effect on mag. props. 1=9032
- $Co(NO_3)_2 \cdot 6H_2O$, volume changes, anomalous, rel. to thermal cycling, down to -180°C 4=10424
- Co—Ni. mag. annealing 1=12533
- Co—Ni—P, effect on fine-particle structure and mag. props. 3=16097
- CoO–NiO–O_2, semiconducting mixtures, elec. cond. depend. 0=15950
- Co—P alloys, effect on fine particle structure and mag. props. 3=16097
- Cr–Ni alloy, quenching, effect on ordering and other props. 0=8270-1
- Cr_2O_3, paramagnetic reson. absorp., 15 times reduction by heating at 1000°C 3=20643
- $Cr_{100}Sb_{94}$, rel. to magnetic props. 1=20161
- CsCl-type alloys, annealing of quenched-in defects 3=22715
- Cu 2=23164
- Cu in air, 5×10^{-5}–10^{-3} torr, 750°–1050°C rel. to oxidation 2=12962
- Cu, annealed, defect prod. by deformation 3=11154
- Cu, annealed, plastic wave theory 2=18988
- Cu, annealing after deform. at low temps. 2=14492
- Cu, annealing of electron damage 2=14480
- Cu, annealing after electron irrad. hardening 2=8738
- Cu, annealing after irrad. hardening, recovery 3=20721
- Cu, annealing, low-temp. stages 1=11194
- Cu, annealing of neutron-irrad. damage, energy release at 600–700°C 1=7608
- Cu, annealing, after neutron irrad. hardening 2=6396
- Cu, annealing at 1000°C in wet H_2 atm. 4=10459
- Cu, annealing of radiation damage 3=22860
- Cu, annealing, sp. ht. at 0.4-15°K 0=20746
- Cu, annealing, structural changes 3=20945
- Cu, cold-worked, stored energy release on annealing 3=11173
- Cu and Cu alloys, annealing of electron-bomb. effects 1=17512
- Cu, cyclic, porosity development 1=14911
- Cu defect self-healing at high temp., mechanism and kinetics 4=12744
- Cu, deuteron-irrad., stored energy release below 80°K 1=7605
- Cu, dislocation depinning 2=21016
- Cu, rel. to dislocation etch pit study 3=22788
- Cu, dislocation loops after neutron irrad., annealing 4=4053
- Cu, effect of annealing on breaking strength 0=11982
- Cu, effect of annealing on dislocations 1=14273
- Cu, effect of annealing on residual elec. resistance 1=6124
- Cu. effect on creep 1=3979
- Cu, electron irrad., 1.25-3.25 MeV, stage I recovery spectrum 4=10010
- Cu, Ge, Ni, Se films, annealing, X-ray reflection studies 0=14089
- Cu, impurity vaporization on annealing 2=18576
- Cu, irradiated, low-temp. annealing 1=964
- Cu, rel. to magnetic props. 2=8608
- Cu, neutron irrad. and annealed 2=8263
- Cu, neutron irrad., annealing, dislocation loops 0=20805
- Cu, neutron-irradiated, annealing kinetics 1=1003
- Cu, neutron irradiated, damage annealing, in relation to rearrangement of "zones" 4=30760
- Cu, point defects, quenched and annealed 4=1455
- Cu, rel. to polygonization 3=20897
- Cu, proton irrad., 10 MeV, stage III recovery 4=10011

Heat treatment—contd
- Cu, quench-hardening and resoftening 3=8907
- Cu, quenched, annealing of vacancies and vacancy aggregates 4=12734
- Cu, quenching condensation of films 0=3278
- Cu, quenching to study lattice defects 3=15481
- copper, rel. to recrystallization 2=2362
- Cu single crystals, effect on u.s. absorpt. 2=16599
- Cu, stage I annealing, rel. to electron irrad. energy 3=8468
- Cu, thin films, rel. to optical properties 3=13146
- Cu, third stage annealing in irradiated Cu, divacancy migration theory 0=17958
- Cu whiskers, quench softening 2=4339
- Cu—4% Ag alloy, Hg-embrittled, quenched and slow-cooled alloys, effect on fracture path 4=30774
- α-Cu—Al alloys, acoustical study of quench-ageing 1=12648
- Cu–Al, annealing and short-range order 4=1988
- Cu—Al alloy, constitution, quenching effect 3=20868
- Cu–Al, effect on faulting 2=8232
- Cu—Al alloy, elastic limit anisotropy 3=11143
- Cu—Al alloy, ordering, rel. to quenching temp. 3=18349
- Cu–Al, quenching, reheating 2=23882
- Cu–Al, short-range order, X-ray diffuse scattering 1=15139
- Cu–Al solid solns., ordering kinetics, theory 4=7484
- Cu alloys, annealing of radiation damage 3=22860
- Cu alloys, internal adsorption, rel. to elec. resistance 0=14064
- Cu–As alloys, effect on thermal and elec. cond. 0=21131
- CuAuI, annealing effects 2=6829
- Cu_3Au, annealed, quenching and elec. resistivity changes 2=2110
- Cu_3Au, cold worked, ordering and strength changes 4=7485
- Cu_3Au, effect on faulting 2=8232
- Cu_3Au alloy, elec. props. rel. to ordering 3=3330
- Cu_3Au alloy, Hall effect rel. to ordering 3=3331
- Cu_3Au, quenching 2=4463
- Cu_3Au, relaxation of long-range order parameter 3=20889
- Cu–Be alloys, structural hardening 3=1349
- Cu–Co, Co precipitates, mag. studies 0=13728
- Cu—Co alloy, coercivity changes 1=2472
- Cu–Co, Cu–Fe, Cu–Mn dilute alloys, effect on elec. resistivity 0=17996
- Cu—Co alloys, effect on mag. props. 1=10149
- Cu—Mn alloy, effect on Young's mod., elec. cond., hardness 1=1297
- Cu–Ni alloys, effect on paramag. props. 2=18891
- Cu—Ni films, annealing, effect on submicroporosity 3=23510
- Cu–Ni alloys, neutron irrad., effect of annealing on mag. susceptibility 0=2980
- Cu—Ni, n prod. vacancy de-segregation, from cond., elec. 4=22645
- Cu—Ni—Fe, effect on mag. props. 1=3886
- CuO—Fe_2O_3, rel. to ferrimag. props. 3=18104
- Cu–Sb cold-worked dilute alloys, effect on elec. resistivity 0=9934
- Cu–Si, vacancy condensation pits 2=20998
- Cu–Si–(Mn) alloys, rel. to atomic rearrangements 3=22701
- Cu—12 vol % SiO_2 alloy, annealed, SiO_2, particle coarsening, hardness, interparticle spacing 4=30868
- Cu—Zn, annealing, rel. to modulus of rigidity change 1=11517
- Cu–Zn alloys, effect on thermal and elec. cond. 0=21131
- β-Cu–Zn, quenching, disorder study 2=2406
- Cu_2O, photo-e.m.f. depend. 0=13633
- Eu_2O_3sintering, effect on semiconductivity 4=4147
- α-Fe, ageing kinetics from kc/s damping 2=16948
- αFe, ageing, mechanism 4=1946
- α-Fe, annealing with C 3=23484
- Fe, annealing of neutron irradiation damage 3=8759
- iron, carbonyl, powders, effects on crystal structure 3=20873
- Fe, rel. to ductility 3=13349
- Fe, effect of annealing on dislocations 1=14273
- Fe films, submicroscopic porosity 2=19108, 23916
- α-Fe, internal friction peak, quenching effects 1=14855
- Fe, powder, effect on Fe^{57} n.m.r. resonance 2=2307
- Fe, quenching, internal friction 1=3963
- Fe, quenching, rapid, and martensitic transformation 4=13495
- Fe, shock-hardened, annealing effects 2=23846

Heat treatment—contd
Fe single crystal production by δ range heating 3=13420
Fe, thermal hardening 0=11987
Fe—Al alloy, coercive force variation 1=11429
Fe-Al crystals, coercivity 2=14770
Fe—3.8% Au solid solution, Guinier—Preston zones 3=8882
Fe—Al, rel. to magnetic props. 1=11435
Fe—Al, quenched, annealed, elec. cond. 3=3327
Fe-Al alloys, quenching temp. rel. to elastic and plastic props. 2=6715
Fe_3Al alloy, electrical resistance anomalies due to annealing 1=6126
Fe_3Al quenched alloy, low-temp. annealing 1=6534
Fe_3Al, quenching and slip system 4=6854
Fe_3Al alloys, structural condition stability 1=1433
Fe alloys, annealing, effect on crystal structure 3=8903
Fe—C alloys, α-tempered, carbide pptn. 3=13539
Fe—C, annealing after irrad. 4=14735-6
Fe—C alloys, quench-aged, structure 3=20903
Fe-Co alloys, annealed, Young's modulus rel. to magnetization and composition 1=20302
Fe—Co—V alloys, annealing, ordering and elec. cond. 4=1992
Fe—Co—V, effect on elec. cond. 4=22676
Fe—Cr alloys, annealing, mag. props., short-range order 1=11580
Fe—Ge alloys, elec. and mag. props. 4=26010
Fe—Mn alloy, annealing, effect on mag. props. 1=9032
Fe—N alloys, quench-aged, structure 3=20903
Fe(50%)—Ni(50%), annealing of defects, rel. to neutron irrad. 3=11056
Fe—Ni, annealing of defects from neutron irrad. 4=1457
Fe—Ni alloys, annealing, effect on strong-field susceptibility 4=28811
Fe—Ni alloys, annealing of irrad. defects, rel. to magnetization 3=22729
Fe—Ni alloys, effect on phase transformation 1=6531
Fe-Ni alloys, effect on temp. variation of coercive force 2=737
Fe-Ni (70/30), elastic changes, u.s. detection 1=7813
Fe—Ni alloys, hardness increase, effect of alloying elements 4=20662
Fe—Ni 50 : 50 alloy, hot-rolled, texture meas. 4=13434
Fe-Ni alloys, orientation superstructures 0=13768
Fe—Ni (1-10%), quenching, rapid, phase transformations 4=13496
Fe—Ni—C martensite, tempering, electron transmission study 4=15738
Fe-Ni-Cr alloys, mag. hardness 2=12762
Fe—Ni—Cr—Ti system, quenched, χ-phase 3=3314
Fe—Ni—Mn, α-phase, effect on props. 4=23168
Fe—Ni—Mn—Ti, α-phase, effect on props. 4=23168
Fe—3%Si, directional ordering by magnetic annealing 3=15804
α-Fe_2O_3 (haematite), effect on structure 0=8209
α—Fe_2O_3, mag. annealing, anisotropy 1=1217
Fe_2O_3 (haematite), thermoremanent magnetization 1=12534
Fe—Si, effect on mag. props. 4=1826
Fe-Si strips, mag. annealing 2=12766
$FeTiO_3$—Fe_2O_3, order—disorder transformations 0=670
Ga, films, annealed, superconductivity 0=16955
GaAs, annealing, rel. to length changes 3=22861
GaAs, annealing props. after reactor irrad. 4=6899
GaAs, containing Li, effect on elec. props. 2=18598
GaAs films rel. to structure 1=11594
GaAs, lattice defects, introduction and removal, effect of Cu 4=15467
GaAs, n-type annealing, rel. to elec. and optical props. 2=23387
GaAs, n-type, electron-irrad., annealing behaviour 2=21005
GaAs, n-type, in quartz tubes 0=13611
GaAs, rel. to paramagnetic resonance centres in high concentrations 3=20647
GaAs, by radiant energy, effect on defects 2=8361
GaAs : Se, electron conc. changes, 650-1100°C 3=22945
GaAs : Te, electron conc. changes, 650-1100°C 3=22945
GaSb crystals doped with O 1=17712
GaSb films rel. to structure 1=11594
Ge, annealing, effect on dislocations 4=1485
Ge, annealing of monocrystals, effect on dislocations 2=21031

Heat treatment—contd
Ge, annealing of mono-crystals, effect on dislocations 3=6516
Ge, annealing rel. to thermal acceptor formation 1=12434
Ge, rel. to domain formation 3=17772
Ge, effect on photocond., 150°-300°C 4=30664
Ge, effect on surface gas evolution 2=8875
Ge, after electron bombard., effect on elec. cond. 2=10463
Ge, heavily doped, reflectivity meas. 4=7155
Ge, magnetoresistance 2=12519
Ge monocrystals, annealing of γ-ray damage 1=7609
Ge, n-type, γ-irrad., annealing stages 3=25313
Ge, at 150°C, effect on surface recomb. rate 1=14438
Ge, after 1.0 MeV electron irrad. at liq. He temp., annealing behaviour 4=9945
Ge, p—n junctions 4=6999
Ge, quenched, effect on recomb. centre formation 1=2408
Ge, quenched, effect on recomb. centre formation 1=6151
Ge, quenched-in acceptors annealing 2=12424
Ge, quenching, point defects, Hall effect study 2=6449
Ge, quenching, vacancy diffusion calc. 2=21076
Ge, recomb. and trapping centres, effect 2=12515
Ge, surface states after ion bombard. and annealing 2=3894
Ge, rel. to thermal acceptor concentration 1=12433
Ge: Fe, Ni, Co, annealing, equilib. and non-equilib. carriers 0=15863
GeO_2, vitreous, effects on absorpt. band 2=4020
InAs films rel. to structure 1=11594
InAs, Frenkel defects, annealing and healing process 2=6319
InAs—In_2Se_3, annealing, under pressure, homogenization 0=1939
InSb, annealing, rel. to length changes 3=22861
InSb films, annealing, effect on elec. props. 2=16726
InSb films annealing, rel. to elec. props. 4=20808
InSb films, crystallite size, rel. to annealing 4=23581
InSb films rel. to structure 1=11594
InSb, γ-irrad., annealing processes from isochronal tempering 4=10059
InSb, In and Sb yield 4=1969
InSb, yield drop rel. to heating in O_2 3=13353
In_2Te_3, α- and β-forms, thermal cond., annealing effects 1=2381
Ir(IV) cryst. hexagonal complexes, neutron-irrad., nuclear recoil defects annealing 2=21006
K films, on KCl, effect on elec. cond. 4=4122
KCl, Co^{57} impurity, quenched, Mössbauer expts. 2=23167
KCl, coloured, thermal bleaching 2=6385
KCl, effect on chem. effects of Cl^{35} (n, α) P^{32} 4=7777
KCl, effect on F-band 2=10418
KCl, effect on prod. of F-, M-and V-centres 4=10002
KCl, F-aggregate centres, thermal prod. 3=4891
KCl, hardening by quenching 3=16008
KCl, thermal quenching effect 0=20835
KCl, V and F-centres, bleaching kinetics 2=12472
KCl, rel. to vacancies and impurities 1=12373
KCl : Ag, X-irrad., annealing 3=5044
KCl.$CaCl_2$ crystals, effect on dielec. losses 4=26103
KCl:Pb, 600°C, effect on absorption spectra and elec. cond. 0=20990
KI, I_2 centre, e.s.r., rel. to heating to 600°C in air for some weeks 2=21083
KI, luminescence 2=10617
K_2CrO_4, neutron irrad. annealing 3=22871
K_2CrO_4, thermal neutron capture, compression annealing 3=25311
$LaTe_{1.7-2.0}$, semicond. n-type prod. 4=4240
LiF, annealing of dielec. defects 4=1650
LiF, annealing, impurity precip., plasticity 1=12376
LiF, annealing of irradiation-induced defects at low temp. 0=2836
LiF, crystal structure changes due to bombardment with alumina particles 4=4044
LiF, dislocation substructive near surface 0=17942
LiF, with divalent impurities, after irradiation 2=12481
LiF, effect of annealing on dielectric losses 1=17821
LiF, effect of annealing on dislocations 1=14273
LiF, effect on internal friction 2=8709
LiF, neutron-irrad., effect on e.s.r. of Li metal in 0=4511

Heat treatment—contd
LiF, residual stress relaxation during annealing 4=23173
LiF, X-irrad., volume expansion and coloration, low-temp. annealing 4=15505
LiF, X-ray irrad., annealing of damage, e.s.r. 1=20218
Li_2CrO_4, n-irradiated, defect annealing kinetics 3=17700
Lu iron garnet, ferrimag. resonance 4=20573

Mo, recovery of lattice expansion due to irradiation 0=20851
Mo, vacancy annihilation after neutron irrad. 3=2787
Mo Permalloy, annealing, effect on coercive force 1=6543
Mo-Permalloy tape, effects 0=3275
Mo—Re alloys, annealing, rel. to dislocations 3=22781
NaCl, after abrasion, damage removal 2=4352
NaCl, annealing, rel. to dislocations 3=17757
NaCl, annealing effects on lattice structure in a slip model 1=1330
NaCl, annealing by X-rays, rel. to vol. expansion and coloration 4=17464
NaCl, cleavage-surface fracture, annealing 2=8746
NaCl, effect on X-ray luminescence 2=6606
NaCl, irradiated, mag. props. and thermolumin 2=6653
NaCl, low-angle grain boundary displacement 4=15481
NaCl, photocond., X-irrad. 0=6142
NaCl, quench-hardened, recovery 2=23772
NaCl, quench hardening 0=15852
NaCl, recovery of mechanically worked faces 2=12861
NaCl, vacancy formation energy, quenching meas. 4=4039
NaCl, after X-irradiation, resoftening by annealing 1=2398
NaCl, X-irrad., volume expansion and colour centres 4=15510
NaCl, X-ray coloured, effect on thermoluminescence 0=2971
NaCl, X-rayed, effect on photo-conductivity 1=11326
NaCl:Cd, quenching from 800°K optical study 2=23564
NaCl:Ni, quenching from 800°K, optical study 2=23464
NaCl:Pb, activator absorpt. spectrum 3=940
NaCl:Pb, 600°C, effect on absorption spectra and elec. cond. 0=20990
NaN_3, irradiated 1=19796
$Na_2O-B_2O_3$ glass, rel. to diamond pyramid hardness 2=10773
Nb, annealing effects on supercond. props. 2=2960
Nb, 500°–1100°C, rel. to emissivities 2=11533
Nb, irradiated, mech. props. 0=16232
Nb wire, rel. to superconducting props. 2=13516
Nb—Sn, superconductivity in mag. field 4=27438

Heat treatment—contd
Nb-Zr, supercond. 2=11563
Nb—Zr alloys, and superconductivity 3=19115
Nb—Zr (25%), and supercond. crit. current—mag. field var. 4=27612
Nb_2O_5, α-phase, vacuum reduction technique 2=10493
Ni, annealing after cold working 4=13431
Ni, annealing, effect on creep 2=21433
Ni, annealing, effect on thermal expansion 2=20938
Ni, annealing, in moist H_2, removal of anomalous mech. props. 3=20722
Ni, cold-worked, stored energy release on annealing 3=11173
Ni, with diffusing Mg, in humid reducing atmos. 1=3686
Ni, effect on grain structure, strength 2=23777
Ni, effect on grain structure, strength 3=3234
Ni electrodeposits, effect of annealing on microstructure and hardness 4=30870
Ni, fatigue, and grain struct. and dislocations 4=23179
Ni films, annealing rel. to electrical resistance 1=11599
Ni films, annealing rel. to external structure 4=10612-13
Ni films, effect on electrical and magnetic properties 1=10027
Ni, influence on coercive force 3=11059
Ni, and internal friction 4=23178
Ni laminations, variation of anisotropic coercive force 1=6315
Ni, long-term strength after hot work-hardening 3=8778
Ni, low-temp. anneal, saturation magnetostriction 2=23671
Ni, and magnetomechanical effects 4=23180
Ni, point defect clustering 3=22721
Ni, quenching, atomic defects meas. 2=12421
Ni, tempering, temp. between cylinder centre and surface 3=9641
Ni thin films, rel. to magnetic anisotropy 2=8641
Ni alloys with Ce, Pr and Cd, annealing coercive force 3=23159
Ni ammonium salts, recovery from n-irrad. 3=8472
Ni-base alloys, Young's modulus variation 0=6292
Ni—Be alloy, ageing, structure changes 3=13507
$Ni_{1-x}Co_xFe_2O_4$, annealed, mag. anisotropy 3=1033
Ni—Cr alloys, Cr carbide precipitates on dislocations 1=15146
Ni—Cr films, vacuum deposited, annealing temp. rel. to structure changes 4=26562
Ni—Cr base alloy, fine structure and mech. props. 3=18351
Ni—Cr alloys, tempering, internal friction 0=1933
Ni—Cr alloys, rel. to tensile strength increase 3=25637
Ni_3Cr, anomalous elec. resist. 1=7612
Ni—Fe, annealing, twin growth and origin 3=25756
Ni—Fe alloy, effect on mag. anisotropy, meas. 4=10282
Ni—Fe films, rel. to magnetic properties 3=18083
Ni—Fe(66:34), with mag. field, effect on internal friction 4=23187
Ni—Fe, and magnetization anisotropy, ordering 4=13205
Ni—Fe alloy, plastically deformed, effect on strength 4=26524
Ni_3Fe, and magnetic anisotropy 3=23155
Ni_3Fe, mag. annealing, ordering process 2=16909
Ni_3Fe, rel. to short-range order during ageing, 300°-450°C 4=23285
Ni_3Fe—(3%)Mo, quenching in air and water rel. to K-state formation 3=13531
Ni—Fe—O, quenching, to determ. phase equilibria 2=2404
Ni ferrite, ferromag. resonance width 2=10686
Ni ferrite, ionic rearrangement, rel. to ferrimag. resonance 4=1861
Ni—Mo—Fe permalloys, rel. to magnetic properties 1=11447
NiO, annealing, dislocation etch pits 2=21046
$NiO-\alpha-Fe_2O_3$ mixtures, rel. to spinel formation 4=1971
Ni—P films, effect on resistivity 2=14497
Ni_3Pt, annealing, short-range order 4=1999
Ni_3Pt, effect on short-range order, microhardness and characteristic temp. 3=8906
Ni-Span C-type alloy, mech. Q-factor rel. to heat treatment 2=12844
Ni—Ti alloys, phase growth and coagulation 2=8855
Ni—Zn ferrite, with Co, mag. annealing 2=8651
Ni—Zn ferrites, annealing and sintering 1=6359
Ni—Zn—Co ferrite, annealing in mag. field 3=3130

Heat treatment—contd
- Ni−Zn −Co Fe garnet, effect on complex permeability,
- Ni—Zn—Cr ferrites, rel. to magnetic properties 4=10293
- Ni—Zr, superconducting crit. current, effect of annealing temp. 3=14460
- Os(IV) cryst. hexagonal complexes, neutron-irad., nuclear recoil defects annealing 2=21006
- P, thermal cycling rel. to phase transformations and elec. props. 4=10436
- Pb-Bi alloys, thermally cycled, dimens. growth coefficient 4=28376
- $Pb(NO_3)_2$, chemical γ damage, effect of crystal imperfections 4=4714
- PbSe, rel. to controlled deviation from stoichiometry 3=22736
- PbTe, carrier conc. and mobility 4=6783
- PbTe, X-ray diffr. study 3=18203
- Pt field emission tips, annealing, polyhedron formation 4=14742
- Pt, quenching, effect on thermoelec. power 2=23486
- Pt wire, elec. resist., recovery after cold working 4=15524
- Pt, wires, rel. to internal friction peaks 3=18166
- Pu, annealing of self-damage 3=22856
- Pu, Pu—Al, annealing, lattice-defects removal 4=1537
- Re, annealing effects on supercond. props. 2=2960
- S, purple, annealing, e.s.r. study 3=20655
- Sb, annealing of twin layers 1=12617
- Sb, low-angle grain boundary displacement 4=15481
- Se, amorphous, effect on spherulitic crystl. 2=6780
- Se, amorphous, G and Q changes on annealing 1=14849
- Se, amorphous, G and Q changes on annealing 1=20306
- Se, centres, $> 900^\circ$C 1=12440
- Se film (1000 A thick) rel. to structure 1=11595
- Si, annealing of neutron-irrad. damage 4=4005
- Si, annealing of radiation damage 3=15581
- Si, annealing of radiation defects 3=22934
- Si, capture centres 4=17495
- Si, rel. to carrier lifetime 3=22933
- Si, rel. to carrier trapping, 800°-1300°C 4=10065
- Si crystals doped with O 1=17712
- Si, Cu-doped, effect on carrier lifetimes 2=18687
- Si, effect on electrical properties 0=20910
- Si, effect on minority-carrier lifetime 1=1064
- Si, effect of structural defects after electron irrad. 3=22764
- Si, electrical conductivity changes 3=15579
- Si Esaki diode, effect of annealing in inert atmosphere 1=10054
- Si films, rel. to resist., Hall effect and X-ray diffr. 2=16709
- Si, after γ-ray and neutron damage 2=23223
- Si, in glass vacuum system, increased acceptor density 0=9967
- Si, heavily doped, reflectivity meas. 4=7155
- Si, minority carrier lifetime 1=19861
- Si, n-type, density max. of α-trapping centres 1=14457
- Si, and optical absorpt. 2=8539
- Si, P-doped, n-type, $Ni^{63}Cl_2$ coated 3=6537
- Si, p−type, effect on elec. props. 0=13603
- Si, p-type, quenching rel. to elec. cond. 2=12521
- Si, p-type, rel. to recombination levels 2=4025
- Si, p−type, volume recombination, at high temp. 0=7932
- Si point-contact diodes, improved characteristics 0=15973
- Si, quenched, effect on recomb. centre formation 1=2408
- Si, quenched, effect on recomb. centre formation 1=6151
- Si, quenching, minority-carrier lifetime 1=1065
- Si, quenching, vacancy diffusion calc. 2=21076
- Si, radiation damaged, annealing effects 2=19096
- Si, semiconducting recomb. centre prod., by quenching, 960-1200°C 3=22932
- Si, single crystals, dislocation behaviour under thermal shock 1=11207
- Si single crystals, identification of precipitate particles by reflection electron diffraction 1=4087
- Si-steel sheets, magnetic props., annealing effects 1=20115
- Si, surface damage annealing processes 4=7705
- Si−Fe, recrystallization structure 2=12701
- Si—Fe, sheet, transformer, effect on mag. props. and recrystallization texture 3=16098
- SiO films, on Al mirrors, annealing 0=8783
- SiO films, annealing of residual stresses 2=838

Heat treatment—contd
- SiO_2 glass, effect on thermal expansion 2=14389
- SiO_2, with < 1% Al, rel. to thermoluminescence and coloration 4=4306
- Sn films deposited at 88°K, annealing kinetics 1=12663
- Sn, quenched in defects, rel. to supercond. transition 1=17507
- Sn-Bi alloys, thermally cycled, dimens. growth coefficient 4=28376
- SnSe, effect on elec. props. 1=17761
- Sn telluride, orientation rel. to annealing 2=8886
- SrF_2 effect on e.s.r. of Gd^{3+} 4=1877
- Ta anodic oxide films, effect on dielec. props. 4=10099-100
- Ta, effect on lattice parameters 4=23489
- Ta films, and supercond. 4=18603
- Ta thin foils, domain patterns due to interstitial impurities 4=22567
- Te, annealing, effect on magnetoelec. props. 1=17623
- Te annealing, effect on magnetoelec. props. 2=3990
- Te, effect of annealing on carrier mobility and elec. resistivity 1=3773
- Te, vacuum annealing, effect on elec. cond. 2=2113
- Th−Zr, hardening, quenching 2=4439
- TiC, effect on X-ray diffr. intensity 2=823
- Ti—Cr alloy, effect on structure and hardness 3=20879
- TiO_2 films, brookite, anatase formation conditions 4=13505
- U, α and β phases 2=10911
- U, α-phase, recryst. on annealing 4=10410
- U, annealed, grain structure, strength 2=12927
- U, annealing following irradiation, swelling 4=12835
- U, annealing in γ-range, inclusions 2=4344
- U, β-quenching, lattice strains meas. 2=19097
- U containing Kr gas 4=2115
- α-U, effect on ductile/brittle transform; —183° to 350°C 4=28987
- U fuel rods, effect on burnup deformation 0=14044
- α-U, incremental collapse while undergoing creep 3=8908
- U, internal friction 2=12843
- U, irradiated, swelling due to heat and pressure 0=8265
- U, irradn. growth 3=8480
- U polycrystals, thermal cycling effects 0=16254
- U, post irrad. annealing 2=20724
- U, quenching, grain shapes 2=4470
- U, recrystallization during forging 2=4471
- U-rich alloys, microstructure 2=17033
- U, swelling, effect of thermal cycling 2=23884
- α-U, thermal cycling 0=13570
- U, thermal cycling rel. to microstructure 2=21545
- UC, annealing rel. to cell size 4=13611
- UC, quenching, prod. of vacancies 2=23159
- U—Mo alloys, annealing, post-irradiation, rel. to nuclear fuel swelling 4=3759
- U−Mo, fine dispersions with Sn, Si 2=4443
- U—Mo alloy, γ-quenched, annealing 3=5135
- U−Mo, quenched, monoclinic phases 2=4454
- UO_2, bright inclusions 2=21534
- UO_2, structure of impurity phases 4=7679
- U-10 steel, quenched, tempered, lattice distortions 3=16106
- U-6 wt. % Zr, dimensional stability 2=4433
- V, effect on hardness and grain size 3=5137
- V—Ga film, superconductivity in mag. field 4=27438
- V−Mo−C alloys 2=17034
- V—Si film superconductivity in mag. field 4=27438
- W, cast, effect on mech. props. and structure 3=11183
- W, doped wires, secondary recryst. 4=10588
- W films, structural changes, electron diffraction study 0=12086
- W, quenching, 2350° to 1.5°K, rel. to vacancies 4=22563
- W, stress/strain relations, temp. effects 3=23307
- W, vacuum annealing, brittleness 0=16241
- W wires, doped, annealed, recrystallization texture 2=6834
- WO_3, rel. to patterns produced 1=15080
- WO_3 single crystals, green stripes induced 2=21050
- Zn, creep, cycling effects 4=13452
- Zn density variation under thermal cycling, to 250°C 3=6868
- Zn, effect on mech. and phys. props. 0=4569
- Zn, polycrystalline, deformation by hot torsion 4=28990
- Zn, polygonization, annealing 1=11216
- Zn single crystals, annealing of dislocations 2=14440
- Zn, thermal cycling, elec., mechanical props. 2=23776

Heat treatment—contd
- Zn, thermal cycling, elec., mechanical props. 3=3233
- Zn, thermal cycling, size effects and microstructure changes 4=13657
- Zn, thermocycling rel. to recrystallization 1=12625
- $Zn(NO_3)_2 . 6H_2O$, volume changes, anomalous, rel. to thermal cycling, down to -180°C 4=10424
- ZnO, lattice parameters, effect of thermal history 4=23500
- Zn oxide, red luminescence 0=10068
- ZnO, in Zn and air, Zn diffusion 0=569
- ZnS, Fe and Cr ion charge transfer, e.s.r. meas. 4=1357
- ZnS, luminescence quenching 3=4987
- ZnS, single crystals 0=10287
- ZnS:Cu, luminescence effect 2=6622
- ZnS : Mn^{2+}, rel. to activator conc. and phase transformation 4=20596
- $ZnSnAs_2$, effect on elec. props. 2=23417
- Zr, thermal cycling growth 2=23883
- Zr–2·5 wt% Nb, hardness 3=1234
- Zr–Nb, phase transformation 2=19090

Heating
- annealing furnace, electron cloud 3=5136
- arc, electric, sample in electrode, chemical reaction effects 3=24257
- atmosphere, radiative heating-rate 3=11393
- due to atmospheric ozone, calc., Curtis—Godson approx. 4=10699
- body by radiant heat, surface heat flow 3=24099
- boiler tubes, critical heat flow, effect of non-uniform heating 0=6970
- cavitation, double temp. jump meas. 4=14118
- ceramic materials, resistance to heating 1=3997
- controlled atmosphere levitation system 0=3393
- crystal imperfection mobility activation meas., extension to higher order processes 4=9940
- current-carrying wires, explosion, macroscopic theory 1=2941
- electron-beam unit, for Czochralski crystal-growing unit 4=26585
- electron-bombardment furnaces, stabilizers 0=4831
- by electron irradiation 1=331
- elements, self-supporting 0=7000
- film substrates, vacuum deposition, radiant heater 4=26707
- flash heating, W vaporization, near u.v. spectroscopy 3=24117
- furnace for calcining powders, 700°-1000°C 1=1626
- furnace, with silit elements, control circuit 1=4508
- furnace, solar or arc imaging, use of light pipes for redistrib. radiation 3=19056
- furnace, for spectroscopy of low-volatile cpds. 3=1817
- furnace for use with X-ray diffractometer 4=10514
- furnaces, gradientless 0=818, 14899
- furnaces, high vacuum, resistance-type 0=8724
- furnaces, laboratory designs, review 0=7001

atoms, electron scattering, sharp resonance 4=25566
atoms, electron scatt., slow, elastic, calc. 4=17259
atom, electron scatt. at zero energy 3=10475
atoms, energy levels, lower bounds, calc. 0=17654
atoms, excitation, double, by e impact 3=19951
atoms, excitation, double, by electron impact, calc. 4=30388
atomic excitation by electron impact 4=25529
atom, excitation by electrons, polarized light 3=8209
atoms, excitation, by electrons, supplementary lines by adding H, Kr, Hg 4=22294
atomic excitation functions 0=5854
atoms, excitation, by He ions, radiation polarization 4=19944
atomic excitation ion—atom collisions, resonance at 28eV 4=19945
atoms, excitation by proton and α-particle impact, calc. 2=527
atoms, excitation by protons and deuterons, 40-200 keV 2=526
atoms, excitation by p and d impact, 40-200 keV 3=8199
atom, excitation by p and H, radiation polarization 4=22316
atoms, excitation in solar chromosphere 3=13889
atomic excitation and spectral polarization, induced by p and H colls, 5-35 keV 4=25533
atoms, excitation of 2^3P state by electron impact 0=20563
atoms, excitation of 2^1S-n^1P lines by electron impact 2=16474
atoms, excited S states, calc. 2=16472
atoms, excited state lifetime meas. apparatus 4=25534
atom, fifth-order wave function 3=4706
atom, fine structure, programme calc. 4=19946
atoms, fine structure of 2^3P and 3^3P states 2=12285
atoms, 5876 A precursor radiation in shock tubes 1=12917

Helium—contd
atoms, forbidden resonances 1=12257
atoms, ground state calc. by extended Fock method 2=8058
atom, ground state, electron spatial correlation 4=22296
atoms, ground-state, repulsion calc. by MO approx. 2=10221
atoms, ground state, Ritz-Hylleraas solutions involving fractional powers 0=17649
atoms, ground state, wave-function expansion 3=25045
atom—H atom interaction energy calc. at short range 4=19993
atoms, $H^+ + He \rightarrow H + He^+$, 0.025-1 MeV protons 3=14518
atoms, Hartree energies 1=5966
atom, Hartree—Fock approx., perturb. corrections 4=6465
atom, Hartree—Fock orbitals, from many-electron trial wavefunction 4=1202
atoms, He—He and He—H repulsive potentials, theory 4=9675
atoms, He—He repulsive potential 0=7795
atoms, and He-like atoms, quadrupole polarizability and nuclear shielding 0=20545
atoms, and He-like atoms, structure 0=20546
atoms, He^3, μ-mesic, internal conversion, nuclear size effects 1=19615
atom and He II, resonance lines 3=14355
atom, inelastic scatt. with H_2 mol. 3=17623
atom, interaction energy with H_2 mol. 3=17622
atoms, interaction of two, variational calc. 2=6108
atoms, interactions with H atoms and ions 0=7716
atom, interactions with oscillating electric field, variation-perturbation method 4=6451
atoms, ionization of He, Ar, H_2 and N_2, 15-180 keV 4=2944
atoms, ionization potential calc. 2=12284
atoms and their isoelectronic analogues, structure calc. 1=7430
atoms, Lamb shift, calc., and electrostatic polarizability 1=12242
atoms, Lamb shift excitation energy in ground state, calc. 2=3707
atoms, mesic, formation in He—H mixture 4=1233
atoms, metastable, deactivation by proton impact, up to 16000° K 3=4718
atoms, metastable, de-excitation by collisions with atoms, cross-sections 2=22894
atoms, n^1P-levels, slow electron cross-section calc. 0=4163
atoms, n^3P level, fine structure 4=30375
atoms, octupole forces between two atoms 1=5980
atom ($1s^2$), electron capture by protons 3=15304
atom, (1s, ns) states, phase mechanics method 4=17242
atoms, optical pumping in $^3S_1$ metastable state 0=13415
atom, optical radiation due to electron impact 3=8208
atom, oscill. strengths, transition probabs. and lifetimes calc. 4=1205
atoms, polarizability, dipole and quadrupole, calc. 0=9729
atoms, polarized light emission, excited by electrons 2=20742
atom, proton impact, spectra meas. 4=25485
atom, recombination rate constants, three-body 4=17852
atom, relative optical excitation functions 3=12778
atom, repulsive energy from H atom, calc. 4=19992
atoms, S-electron elastic scattering 4=9670
atoms, $^3S_1$ state, energy shifts of mag. sublevels by optical pumping 2=16490
atoms, S-states, variational calc. 3=22471
atoms, scattering by electrons and X-rays 1=3518
atomic scatt., nonadiabatic effects at high energies 4=1228
atoms, scattering of slow electrons, calc. 1=4913
atoms, Schrödinger eqn., lower bounds for eigenvalues 1=15686
atoms, self-ionization probability 0=15656
atom, slow electron scatt., simplified exchange operator 4=19980
atoms, slow electron scatt., variational method 2=22917
atom, spectral line blackening in hollow cathode 3=19936
atomic spectrum in flowing afterglow 4=18727
atomic spectrum, self-broadening calc. 4=17240
atomic structure calc., ground state 4=22297
atoms, struct., electron, phase mechanical calc. 4=22293
atoms, structure, multiconfiguration approx. and its convergence 2=16466
atom, transitions between S and P states, f values 4=17243
atom, by truncated reaction operator formalism 4=2553

Helium—contd
atoms, 20 keV, bombard. of W, surface damage 4=15511
atoms, two-electron transitions to autoionizing states 3=19927
atoms, two-electron transitions to autoionizing states 3=19928
atom, $(2p)^2$ state, split-p-orbital calc. 4=1203
atom, $(2p^2)^3P$, quasi-stationary states 3=2554
atoms, 2^3P and 2^1P states, calc. 0=20547
atoms, 2^3P state, energy and fine structure, variational calc. 0=2713
atom, 2^3S state, config. interaction method 3=25046
atoms, 2^3S state energy, configuration interaction calc. 2=22893
atom, 2^3S_1 state, mag. suscept. calc. 4=28113
atoms, wave-function in momentum space 0=17655
atom, X-ray scatt. factors, Schwartz method 3=10445
autoinization levels, calc. 4=12356
autoionization probabilities 4=24567
beams, atomic and ionic stopping powers of H_2 gas 4=25778
beams, thermal, scatt. by H and He gases 2=23017
in betatron, electron loss by scatt. 3=459
breakdown, laser induced, at high pressures 4=8654
breakdown, 10^{-6} mm press., using secondary electrons 3=4090
bubbles in Cu, diffusion, rate of migration 4=30573
burning in giant stars in globular cluster 0=18870
He-burning reaction products in stars 3=11563
C_2H_4—He gases at high press., interface tension 1=4317
charge-changing collisions with Li^+ ions, 10-475 keV 0=19625
as charge stripper in production of multiply-charged ions 0=19626
chromatograph for recording He content in gas streams 1=11643
in chromosphere, emission, level occupations 2=24127
colliding with Ni, W and Pt, thermal accommodation coeffs., theory and expt. 4=15814
collision cross-sections, atoms and resonance photons, with Ne and A 0=2727
collisions with light element (Z=2 to 18) ions, electron loss 2=9535
collisions with light element (Z=2 to 18) ions, electron loss 3=7448
compressibility, virial coeff., 20-300°K, 1-33 atm 1=1766
conductivity thermal, $He^{3,4}$ gas, 0.4-3°K 4=16145
cooling cycle, from room temp. to liquefaction 0=8967
cooling of irradiated specimens, computer programme for calc. 4=2866
cosmic ray primaries, $He^3/(He^3+He^4)$ ratio 2=16257
cryogenic tests, 2.5° to 4.2°K, below 10^{-6} mm Hg 4=2736
cryostats, with escaping vapour as coolant 0=19571
cryotrapping continuous, by Ar, 4.2°K 4=18271
d.c. discharge, afterglow, electron energy decay meas. 4=11542
dense gas, polarizability change due to many-body interact. 3=1705
deposition in metals by x-bombardment vacancy study 0=17956
desorption rates and heats of desorption from silica gel and sand 4=7729
diamagnetic susceptibility calc. 2=18411
diamag. susceptibility calc. 3=6348
dielectric const. of gas up to 100 atm. 0=19204
diffuse lines in plasma, pressure broadening 4=28110
diffusion, in air, H_2, CO_2 0=8697
diffusion of CO_2, in He–N_2 mixture 0=10688
diffusion in fused quartz 1=3685
diffusion through glasses, in vacuum applications 1=10010
diffusion with HT, DT, T_2, thermal 3=21430
diffusion, in H_2, pressure effect 4=27215
diffusion of He^4—He^3 in pure He, thermal 3=14203
diffusion, into Kr, through porous materials, separation 3=9491
diffusion in Li halides, after n. irrad. 3=15508
diffusion in liq. H 2=1140
diffusion, in N_2 and Ar, rel. to intermolecular potentials 2=2764
diffusion in polymers 4=6877
diffusion processes in plasma column 0=15023
diffusion in Si, Ge, and diamond 4=28490

Helium —contd
diffusion, solubility and permeability in glass 0=5051
diffusion, in sun, convection controlled 0=4889
diffusion, in sun, H_2 layer formation 0=4888
diffusion, thermal, He^3/He^4 meas. 3=11823
diffusion, thermal, quantum diffr. effects 3=21431
diffusion in Xe, thermal, calc. 3=7233
dipole and quadrupole polarizability by Hartree perturbation 1=9805
discharge, d.c., at high pressure, elec. and spectrosc. study 4=11539
discharge, d.c. voltage production in low pressure tube 1=2951
discharge, e.m. radiation, 35 and 10 kMc/s, rel. to mag. field 3=4031
discharge, electric, positive column, helical instability, in mag. field 3=16915
discharge, hollow cathode, spectrum shift 4=18812
discharge, pulsed, light characteristics rel. to external mag. fld. 3=1959
discharge, vacuum u.v. spectra 3=7462
effect on recrystallization and grain-boundary motion in Al 3=11222
elec. discharge, in axial mag. field, plasma oscill. 1=16352
elec. discharge, electron energy distrib. 1=16316
elec. discharges, plasma oscillations, electroacoustic waves 0=2369
elec. discharge, positive column, Hall effect 3=4036
elec. discharge, shock waves, magnetically driven 3=7278
He, electric field, shielding factor by Hartree perturbation 1=9805
elec. sparks, charged-particle density 1=16281
electrodeless discharges, of H_2–He mixtures, ion pressure variations and reaction rate consts. 0=14969
electrodeless discharges, self-absorption 0=4172
electron capture in, by ions with Z=(2-18) 1=18779
electron collision cross-sections for $1S^1 \rightarrow 2P^1$ transition, calc. 4=12395
electron collision cross-sections and oscillator strengths in ionized continuum 4=12397
electron diffusion—mobility coeffs. ratio 3=4023
electron drift velocity in 0=5862
electron drift velocity meas. at high E/P 4=11550
electron impact spectra 4=6520
electron impact spectrum, higher resolution study 4=12354
electron inelastic collision cross-sections rel. to scattering angle 4=12396
electron inelastic scattering 4=12394
electron motion in 0=10879
electron scatt., fast, elastic, e^- and e^+, calc. 0=9753
electron scatt. by gas, atomic excitation 3=25066
electron scatt., induced radiation, polarization 3=17543
electron scatt., multiple, 40-130 keV, spatial distrib. 4=887
electron scattering, sharp resonance at 72° of 19.3 eV 3=10474
electron stopping power 0=352
emission from nebulae 0=10520
energy calc., improved Hylleraas method 0=11486
eqn. of state, at absolute zero 0=6005
equation of state, 0°-150°C 4=2722
escape from atmosphere 0=782
escape from exosphere 0=18503
excitation in aurora 1=21056
excitation by electron impact 0=5855
excitation by electron impact, using trapped-electron method 0=2755
excitation by electrons, abs. excit. functions rel. to pressure 4=25330
excitation function for electron impact 0=465
excitation and ionization, produced by single electron impact 4=25535
excitation and ionization in solar flares and prominences 2=15355
excited states, single-configuration calcs. 4=25483
freezing, He^3—He^4 mixtures, and λ curves 4=14485
gas, ionization by H^- and O^- ions 1=4558
gas, spontaneous vibrations in 0.3 mm tube, 10-20°K 0=19203
glow discharge, positive column instability in mag. field 1=284
H_2^+ dissocation in, 200-1200 keV 1=16266
H/He relative abundances in cosmos 1=15518

Helium—contd
H ion production in, by proton beams 2=1386
h.f. discharges, ignition, effect of auxiliary electrode temp. 0=2353
h.f. discharges, plasma loops 0=14986
He-like ions, X-ray scatt. factors 1=17287
heat transfer from thin cylinders, expt. rel. to theory 4=8515
high-temp., kinetic and transport parameters 1=18466
injection into air, thermal diffusion effects 4=5221
interaction energy with Li 2=8118
interaction with H atom 4=25583
interaction between two normal atoms 0=13452, 15676-7
interatomic, Morse potential force consts. from viscosity 4=9787
interatomic potentials, comparison 4=12406
ion beam on W, photon prod., 25-100 eV 3=21900
ion beams, energy loss in metal foils 0=3814
ion collisions, in H and D 0=10881
He-ion concentration in upper ionosphere 2=6929
ion densities, high, shock-wave production 1=18764
ion emission, field 3=19371
ion mobilities from electron density meas. 4=2948
ionization ahead of cylindrical shock waves 3=1759
ionization coeff., primary 2=19898
ionization cross-section, partial, when bombarded with protons, 0.8-3.75 MeV 4=27481
ionization cross-sects, on He, Ne, N_2 4=24572
ionization cross-sections near threshold, electron impact 1=16257
ionization, electron impact, up to 500 eV, current saturation 4=16432
ionization by electrons, mass spectrometer study 2=15883
ionization by fast He atoms and He^+ ions 4=24566
ionization, first and second coeffs., meas. 4=18681
ionization, first Townsend coeff. meas. 4=8618
ionization growth, role of delayed photon processes and metastable atoms, 4=24570
ionization, He atoms and ions, 15-180 keV 4=2944
ionization, and He^+, Ne^+, Ar^+ beam losses 4=24594
ionization, He^{2+} formation from He by electron impact, cross-section 0=14968
ionization, high press. coeffs. 4=14576
ionization, multiple, by electrons 0=7070
ionization, primary coeff. rel. to pressure 4=18679
ionization by protons, 0.15-1.1MeV 3=4006
ionization in pulsed discharge 2=1388
ionization, by ruby laser 3=19170
ionization, secondary, rel. to positive ions and non-resonance radn. 4=8619
ionization rel. to structure of planetary nebulae 4=20902
ionization study, high press., low temp., equilib. eqn. 4=11531
ionization, by 30-1000 eV He atoms, meas. 4=27482
ionized atoms, escape mechanism from atmos. 3=13692
ionized, slightly, cyclotron reson., collision frequ. det. 4=461
ionizing collisions of metastable atoms in gases 2=17782
in ionosphere 3=9072
ions, bombardment effects in Si 3=10708
ions, bombardment of Mo, Zr, graphite, secondary emission 2=220, 22273
ions, complex negative, mobility, 4°K 2=15885
ions, electron capture from H 0=8997
ions, electron capture in H, He, Ar, N, Kr 2=17792
ions, electron capture in H_2, He, Ar, N_2, Kr 3=5631
ions, electron capture and loss, in H, He, N, Ar, Kr, 200-1500 keV 2=162, 22169
He ions in, electron capture and loss, 200-1500 keV 2=162, 22169
ions, electron scattering, elastic, polarized orbital method 4=28149
ions, electron scattering, exchange polarization approx. 4=25564
ions, energy loss and effective charge in gases at < 10 MeV/a.m.u. 3=1937
ions in He gas, at 500°K, transfer exchange cross-section, field, temp. var. 4=29870
He ions in solids and gases, range and energy loss 2=7674
He^-, auto-ionization by spin—spin interaction 1=13928
He^- beam prodn. 3=7650
He^- beam production 4=29987
ions, He^-, dissociation by variable strong elec. fields 1=2947

Helium—contd
He^- formation in He by He^+ beam 4=19114
ions, He^-, lifetime and interaction cross-section with He gas 1=4559
He II arc discharge, spectral line broadening 3=4069
He II λ 4686 A line, electron impact excit. 4=1225
HeII spark spectra in low-press. plasma 3=7609
ions, He II, 3s, p, d—4s, p, d, f line complex 4=22299
ions, He^+–Ar, He^+–Ne, He^+–He potential energy functions 1=818
He^+, atm. distrib., 130-430 km 4=26839
ions, He^+, bombard. of Cu, sputtering ratios 0=9110
ions, He^+, bombard. of metals, secondary emission 0=9078
ions, He^+, charge transfer cross-section 0=12589
ions, He^+, charge transfer to O_2 and N_2 3=24224
ions, He^+, collisions with H_2, prod. of Lyman-α radiation 3=6366
He^+ collisions on O_2 3=21707
He^+ in discharge in mag. field, reaction ht. cond. 4=29882
He^+, electron capture from scattering He atoms 4=19995
He^+ —electron scattering 4=25532
He^+, electron scattering by 1s, 2s, 2p states 4=15301
He^+, excitation cross-sections for electrons 4=15300
ions, He^+, excitation by protons and α-rays 2=10215
He^+—H_2 reaction, cross-section, phase-space kinetics theory 4=23627
He^+ —He, charge transfer, differential and total cross-sects 4=24573
ions, $(He^3)^+$, hyperfine anomaly, theory 1=801
He^+, $^{2+}$ ion beams, 10 to 100 keV, det. by nuclear track emulsions 2=20052
ions, He^+, ionization cross-sect. meas. 3=7425
He^+, ionization by electron impact, calc. 3=14519
ions, He^+, ionization by electron impact, cross-section 1=18765
ions, He^+, ionization of He, Ar, H_2 and N_2, 15-180 keV 4=2944
He^+, ionization near metallic surface and highly excited states, long-lived 4=25514
He^+, Lamb shift 1=7425-6
He^+, Ne^+, Ar^+ beam losses due to ionization 4=24594
ions, $(He^4)^+$, orientation by exchange collisions with Cs atoms 2=17785
He^+ positive ion stripping and neutralization, 100-450 keV, 4=24568
ions, He^+, range in quartz, 7.5-52 keV 1=336
He^+, reflection on solid surfaces 1=10744
ion, He^+, scatt. on He, resonant electron capture 4=5563
ion, He^+, scatt. on He, resonant electron capture 4=5564
He^+, sputtering yields, atomic number depend. 2=11726
He^+, structure, effect on electron emission production 1=16391
He^{2+}–H charge transfer, quantum theory 2=6107
ion, $He^{2+} + H(1s) \rightarrow He^+(2s \text{ or } 2p) + H^+$, theory 3=9732
ions, He^{2+}—He charge exchange, resonant 3=16909
$He^{2+} + He^+(1s) \rightarrow He^+(1s) + He^{2+}$, calc. 3=1938
ions, He^{2+}, interaction with and mobility in He 0=5279
He^{2+} ion, resonance charge transfer with H atom 2=16492
He^{2+}, single and many-configuration LCAO-MO SCF approx. 2=20810
He_2^+, wavefunctions 3=12806
He_2^+, binding energy, new lower limit 3=723
$He_2^+(^2\Sigma_u^+)$, dissociation energy calc. 4=1320
ions, He_2^+, dissociative recombination meas. 4=18693
ions, He_2^+ formation from He^+, reaction rates meas. 4=11532
ions, He_2^+, formation kinetics 4=2145
ions, He_2^{2+}, natural orbital expansion coeffs. 4=25648
ions, He_2^+ prod., in mass spectrometer, var. with electron energy 3=14523
ions, inelastic scatt. on O^{16}, 65 MeV, rel. to levels 4=17201
ions, irrad. of quartz and vitreous silica, stress relaxation 4=15507
ions, interactions with H atoms and ions 0=7716
ions, negative, electron—electron and electron—nuclear energies 4=1178
ions, negative, source 0=12640
ions, single exosphere, distrib., 1500, 2000°K 3=16240
ions, sputtering of Cu, atom, energy distrib. 4=24754
ions, sputtering of K 2=3093
ions, 20-100 eV, sputtering of Au 2=13607
ions, wave-functions 0=15642
ions (Z=2 to 13), range 2=7674
isotope shift calc., 2^1P, 2^3P 4=6464

Helium—contd
isotopic abundance in meteorites 2=951
isotopic anal., spectral methods 1=3526
He λ10830A emission spectra in aurorae 1=15314-15
in lasers, 6328 A oscillation modes 4=14934
in lasers, Zeeman effect, at 3.39 μ 4=14936
Li^8 ion range, 40 - 450 keV 1=7107
light source, plasma, for 584A 4=27305
luminescence spectra, by α-ray excitation, variation due to N$_2$ and Hg impurities 1=8165
Maier-Leibnitz expt., repeat electron collision cross-sect. 4=19984
in MHD generators, ionization, non-equilib., seeded with Cs 4=18663
melting curves of He^3 and He^4 0=228
in metal films, migration and coalescence 3=25314

photo-ionization 0=15646
photo-ionization 3=25047
photoionization cross-sections 4=18680
pinch, discharge, linear, spectroscopic meas. 3=7559
planets, radiation, scattered solar HeI, obs. possiblity 3=16343
plasma, afterglow, electron—atom momentum transfer, 10^{-3} eV, 4.2°K 4=14638
plasma, break-up, diffusion mechanism 1=4603
plasma, cold, negative radiation temperature 3=9787
plasma, collision-dominated, spectra 3=7506
plasma, decay in mag. field 3=14591-2
plasma, decaying, ionization processes 3=14517
plasma, deionization rate in mag. field 1=11912
plasma, drift of ions, influence of mag. field 2=1394
plasma due to e.m. driven shock wave 2=11640

Helium—contd
plasma in electromag. T-tube, Stark profiles 2=3700
plasma electron-beam generated waves at cyclotron harmonics 4=16500
plasma, electron collision freq., meas. 2=22228
plasma, electron density and temp. from line profile meas. 4=18857
plasma, electron—ion recombination 2=3029
plasma, electron—ion recomb. to excited bound states 4=5565
plasma, electron temp. and percentage ionization, spectroscopic determ. 4=16486
plasma, energy balance parameter meas. 4=531
plasma gun, two-stage, repetitively fired, coaxial, characteristics 4=19068
plasma, hard X-rays, in strong mag. fld., rel. to E/p 4=11612
plasma, He II line profile 2=7620
plasma, highly ionized, in steady state 2=17820
plasma incoherent microwave radiation at 3000 Mc/s 0=2370
plasma, injection into cusp mag. field 1=7081
plasma, ion recombination in mag. field 3=14603
plasma, ionic recombination 3=4106
plasma, temp. and density 0=19689
plasmajet i.r. emission spectra 1=11070
plasma jet, spectroscopic invest. 4=5618
plasma, optically thick in red, i.r. 3=16924
plasma, optically thin, temp. and density meas., spectral meths 3=7577
plasma oscillations, frequency det. 3=2004
plasma, pulsed, anomalous afterglow of H 4=29920
plasma, pulsed electron—optical radiation recording 4=21514
plasma, radiation temperature resonances, r.f. meas. 3=4121
plasma, rate processes, simult. differential eqns. 4=14633
plasma, shockwaves, temp. and density relations 4=5611
plasma spectrum, forbidden line 2=1416
plasma, in theta pinch, electron temp. meas. 3=12142
plasma, threshold ion energy 2=9601
plasma, weakly ionized, spectrosc. investigation 4=18854
plasma, z-pinch effect at high gas densities 4=14693
plasmoids, fast moving 4=11604
population inversion investigation 0=7212
positive ion production, by energetic He$^+$ impact 4=24569
positive ions, bombard. glass, electron emission 1=1909
positive ions, bombard. glass, electron emission 1=4638
positive ions, 5—25 keV, sputtering of Cu 1=8363
positron lifetime in, at low temp. 0=1274
powerful impulsive discharges, electron energy meas. 3=7452
precipitation in copper, effect of neutron irrad. 1=6544
preconduction current pulses, at low press. and audio frequency 0=1105
primary specific ionization 1=8305
prod. from air decomposition plant 3=16472
production and use 3=16471
r.f. discharge with flow, steady state soln. 0=3755
radiation due to electron impact, polarization 3=4719
radiation width and resonance broadening 4=9634
rarefied, de-ionization in magnetic field 1=13069
reactions with H$_2$ and H$_2^+$ 3=11342
refractive index and verdet const., theoretical deriv. 1=8164
refrigerator, closed-cycle 2=5224
repulsive potential between two normal atoms 0=9756
SCF theory, LCAO approx. 4=22272-4
Saha eqn. for ionized He 2=4717
scattered by He, scattering cross-sections, calc. 4=12402
scattering by Ni, polycrystalline 4=19996
Schrödinger eqns. for ground state 0=15640-1
selective diffusion through quartz 1=10542
shock wave, equilibrium state behind 3=16698
shock wave, self-ionizing, 50μ Hg, structure 4=18830
shock waves, electron densities and temps. 3=1752
shock waves, rel. to intermol. force laws 3=1755
shock waves, jump conditions, effect of ionization 4=16174
shocks, compression, e.m. driven, prod. and props. 3=7276
slightly ionized, transport props. in high elec. fields 0=8989

Helium—contd
solar, abundance, from cosmic ray primaries 4=15938
in solar chromosphere, excitation 2=981
solid He^3, nuclear spin relaxation 0=12554
solid He^3, theory, calculated props. 0=14921
solid He^4, thermal expansion, negative values below 1.5°K 0=16941
solid, thermal conductivity of He^3–He^4 mixtures, 1.1-2.1°K 0=12549
solubility in H, temp. correction 3=24112
solubility in liq. H$_2$ 4=18182
spark channel brightness 1=5428
spark channel brightness 1=10681
spark discharges 0=14998
spark discharges, I, V and spectral line intensity, time depend. 1=283
spark discharges, line broadening and shift 0=13417
sparks, temp. fall from 50 000° to 5000°K 4=8659
specific heat, vapour phase, <4.2°K 1=4522
specific heats behind strong shock front 3=16699
specific primary ionization, relativistic increase 1=8407
spectra, continuous, in vacuum u.v. 2=16473
spectra, He I and II, shock-wave excited, structure 1=2782
spectra, rel. oscill. strengths of 10 transitions 4=30376
spectral lines from limb of solar disk 1=15473
spectrum, continuous, vacuum u.v. 3=7246
spectrum in crossed elec. and mag. fields 0=476
spectrum, discharge, electric, r.f., similarity to Geisler tubes at high powers 4=5612
spectrum, emission, 1.6-3.7μ 3=15281
spectrum, fine structure meas., precise method 0=2732
spectrum, He—Ne, stimulated transitions 4=28130
spectrum He$_3$, h.f.s. of 2^{1}P - 4^{1}D line, no 4^{1}D$_2$ h.f.s. anomaly 4=12359
spectrum meas., by electron scatt., agreement with u.v. 4=3828
spectrum of nebulae 2=15383
spectrum, in plasma, displacement, blue 4=530
spectrum profiles, HeI in arc 4=19947
spin-diffusion at low temps., quantum theory calc. 4=8244
Stark line broadening, in arc under variable press. 4=1201
stars, He burning phase, evolution 2=9086
stopping cross-section for 40-250 keV protons 3=22133
thermal conductivity, up to 500°C 0=8711
thermal conductivity, at high temp. 0=10797
thermal conductivity, of mixtures of other inert gases 0=104
thermal diffusion in Ar and CO$_2$ 1=174
thermal diffusion factor 1=8156
thermal diffusion factor, temp. dependence 1=15948
thermal transpiration, 10^{-8}-20 torr 3=18844
thermodynamic props., 3-20°K, up to 100 atm. 0=19532
He, thermodynamic props., up to 100,000°K, partition function cut off effect calc. 4=16146
third virial coeff., He^{3,4}, quantum theory 0=903
in thorianite, cause of fragmentation on heating 0=4579
toroidal discharge plasma, elec. meas. 2=17839
total specific ionization 1=5423
tracks in nuclear emulsions 0=12777
triboluminescence on bubbling through Hg 0=14698
triplet intensity ratios, 4713 and 4472 A 1=17267
triplet intervals, wave-function calc. 0=2711
2^{3}S excitation level 1=8807
u.s. velocity at low temp. and up to 9 atm. 0=2281
u.v. emission, in corona discharge 0=1123-4
in upper atmosphere, emission spectra 2=6955
in upper atmosphere, i.r. emission, twilight enhancement 2=21661
virial coefficient with H 1=6898
viscosity, meas. 0=16723
viscosity meas., oscillating disc. method 3=14189
viscosity, 1-137 atm., 25-237°C 0=8673
viscosity and thermal cond. of Kr—A, Kr—Ne, Kr—He mixtures 1=10526
viscosity 20°-80°K 0=92
He wave-functions from Slater orbitals 1=2278
X-ray scatt., coherent and incoherent 1=19681
He I, excitation in solar spectrum 0=6602
He I, line spectrum, determination 0=2734
He I lines, transition probabilities, half-widths, and shifts 4=3780

Helium—contd
He I Stark broadening in fully ionized plasma 4=18853
He–Ar, He–CO$_2$, diffusion, Kirkendall effect 1=176
He—Ar with Hg discharges, resonance radiation meas. 4=21475
He–Ar mixed, i.r. absorpt., collision induced 2=2775
He–Ar mixture, thermal diffusion 2=19612
He—Cs discharges, nonthermal ionization 1=11920
He—Cs plasma, microwave diagnostics, up to 3000°K 3=4135
He–H$_2$ gas mixtures, Raman effect 2=1204
He+H$_2^+$→HeH$^+$+H meas. 2=15881
He—H$_2^+$ reaction, cross-section, phase-space kinetics 4=23627
He–He atomic interaction between 0.55 and 1.0A 2=10220
He and He-like ions, X-ray scattering factors 1=17286
He—He, potentials from neutral beam elastic scatt. 4=25777
He—He repulsion, Hellmann—Feynman theorem 1=823
He—He Rosen interaction potential 3=10507
He—He, scattering potential 1=8825
He—He, united-atom configuration-interaction 3=10508
He—He$^+$—e decaying plasma, recombination and energy balance 4=18809
He—Li$^+$ interaction, 5 to 25 keV 3=4005
He—N$_2$ mixtures, compressibility and 2nd virial coeff. 3=14192
He—Ne discharge, decay rate of metastable states of Ne meas. 4=28132
He—Ne discharge, glow, quenching by microwaves 4=18729
He—Ne, discharges, elec., excited atom concs. in plasma decay 4=21469
He—Ne glow discharge, laser action 4=16695
He–Ne laser, pulsed voltage operation 2=20140
He—Ne mixture, laser transition coupling 4=14935
He–Ne optical maser, frequency characteristics 2=5155
He–Ne optical maser, magnetostrictively tuned 2=17603
He–Ne optical maser, Zeeman effect 2=16025
He—Ne system, population study by resonant cavity spectroscopy 4=19288
He—O$_2$ afterglow, electron removal 3=4064
He–Xe mixtures, ionization by relativistic electrons 2=11613
Xe—He mixture, viscosity and thermal cond. 1=159
He^3 abundance on sun 3=7032
He^3 adsorption and nuclear relaxation on Pyrex 4=7350
He^3, in cryostats, glass and metal systems 0=10856
He^3, gas, nuclear spin relaxation time, at 4.2°K 0=1068
He^3, hyperfine structure and isotope shift 0=9766
He^3, mass determination 0=7708
He^3, melting point and heat of fusion 0=2280
He^3, metastable triplet state, hyperfine structure 0=2712
He^3 metastability exchange cross-section, temp.-dependence 4=25589
He^3, mixed symmetry states and nuclear photo-effect 4=9321
He^3, nuclear polarization 2=22896
He^3 nucleus, radius, Coulomb energy 3=12519
He^3, ^{1}D levels, h.f.s.; mag. reson. obs. 4=28111
He^3, photodisintegration 4=25213
He^3, photodisintegration cross-sections calc. 4=6319
He^3, semicond. detector, for dE/dx and E meas. 1=3255
He^3, semiconductor and gas-ion detector 2=9746
He^3, solid, anomalies near melting curve 0=10820
He^3, solid and liquid, self-diffusion and nuclear spin relaxation times 0=1069
He^3, solid, nuclear alignment 0=8884
He^3, solid, nuclear spin system 0=3699
He^3, solid, thermal cond., rel. to density 0=19545
He^3, solid, thermal expansion coeff. 0=19546
He^3, Soviet and Western research 1=4523
He^3, superfluidity 1=13610
He^3, T removal by adding H carrier and freezing at 4.2°K 4=5491
He^3, T$_{62}$ temp. scale 4=16303
He^3, thermodynamic phase diagrams 2=1331
He-3 and 4, beams below 0.5°K 4=2905
He^3—He^4 freezing mixtures, phase diagram, down to 0.45°K 4=8550
He^3, He^4 and He$^+$, Lamb shifts 3=7328
He^{3,4}, ioniz. pot., Lamb shifts 0=7695
He^{3,4} ions, ionically pumped, re-emission by He^{4,3} bombardment 2=9639
He^3–He^4, liquid–crystal equilib. diag. 4=2912

Helium—contd
He^{3,4}, in lower thermosphere, lifetimes, thermal diffusion and escape rates 3=5209
He^3(25%)—He^4(75%), melting, latent heat, 0.4-1.1°K curves 4=14486
He^3/He^4 ratio in solar flares 2=15360
He^3–He^4, separation 0=471
He^3–He^4, solid, thermal cond., theory 0=19544
He^{3,4}, viscosity 20-80°K 0=8705
He^4, eqn. of state, comparison with Bose–Einstein system 0=14531
He^4 gaseous, quantum corrections to self-diffusion 1=6894
He^4 ions, energy loss in Ni, O_2 and nuclear emulsions 0=17051
He^4 ions, energy loss and range in solids 2=1931
He^4 liquid, μ^- capture rate, bubble chamber meas. 4=30244
He^4 liquid, π^- capture, recoil spectrum, bubble chamber meas. 4=30244
He^4, melting, latent heat, 0.4-1.1°K curves 4=14486
He^4, PVT relations near melting curve and λ-line 2=15830
He^4, 2nd virial coeff., high temp. 3=21440
He^4 I, spectrum and energy levels 0=7722
He^4 temperature scale (1958) 0=7036
He^4, third virial coefft., quantum calc. 3=14206
He^4, three-body bound-state, binding energy 3=25109
He^6, atomic excitation by own β-rays 1=13961
He^6 source, continuous generation and fast transfer 4=9433
He^8, predicted new isotope 0=13396
He$_2$, ($b^3\Pi_g$-$a^3\Sigma^+_u$) band spectrum 2=3703
He$_2$ ground state energy, rel. to atomic scattering 4=25587
He$_2$ 600 A band 4=6569
He$_2$ spectrum, in flowing afterglow 4=18728
He$_2$ ($^3\Sigma_u^+$), potential curve, orbital calc. 4=1261
gas
(Subheading introduced in 1961).
adsorption on Hg 2=1126
adsorption on Pt 2=8889
afterglow discharge, probe studies 3=7440
breakdown by azimuthal elec. fields 2=22195
charge, residual, of atoms, search for 1=2307
cluster theory of saturated vapour of isotope mixtures 2=11418
compressibility, theory rel. to expt. 2=19605
compression, non-quasistatic 2=19585
D_2 content, in reactor coolant loop, mass spectrometric determ. 4=2174
deionization rate in a mag. field 1=18775
diffusion, in binary mixtures with Ar, N_2, CO, air, CO_2, SF_6, 290-470°K 4=27216
diffusion of He^3 in Ti and Mo rel. to temp. 1=10011
diffusion of Kr^{85} in dense gas 3=1720
diffusion in N 2=5051
diffusion in NH_3 2=19608
diffusion in O 2=5050
discharge, electrodeless, in a torus, plasma insulation from wall effects by hot gas 1=1905
discharge plasma, microwave study 2=15899
elec. breakdown at 8 Mc/s 1=18809
elec. discharge in He—Ne, maser oscillations and population inversion 1=7440
electric discharge, v.h.f., in restricted gap, spectra 1=4907
gas, electrical conductivity 3=11840
electron capture in, by multicharged ions of light elements 2=163, 22168
electron capture from multiply charged Kr ions 2=17791
electron capture by protons from (1s^2) state, calc. 1=7031
electron drift and diffusion in, with crossed elec. and mag. fields 2=17779
electron drift velocity, 77-373°K 1=2300
electron scatt., elastic, scatt. length calc. 1=9916
emission continuum in vac. u.v., suggested He$_2^+$ state 1=12248
excitation collision transfer from singlet to triplet states 1=19597
excitation by electron beam, new process of excitation transfer 1=9915
excitation by proton impact at 200 keV, visible spectra 1=7435

Helium—contd
gas—contd
flow, free-molecular, momentum transfer to metal surfaces 3=5456
flowmeter for He gas 4=18224
gasifier for obtaining pressures up to 100 atm. at low temps. 3=12013
glow discharge, positive column instability 2=7582
heat transfer from inside wall of hot tube 2=9419
high-pressure gas apparatus with He pressure medium 1=4166
inhalation, effect on speech 2=9137
injection into turbulent compressible flow 2=19741
interplanetary, extreme u.v. radiation 2=4726
ion mobilities in He—Ne mixtures 1=7028
ionization, by electrons and protons, Born approx. 2=9529
gas, ionization growth times and secondary processes 3=9725
ionization by ions or fast atoms, electron energy distrib. 1=4560
gas, ionization by 100 keV protons 3=19177
gas, ionized, rarefied, charge-carrier diffusion 3=16906
ionized, recombination coeff., electron-temp. depend., impurity effects 1=4562
isotopic thermal diffusion factor, calc. 1=12918
Joule—Thompson zero press. coeff., exptl. and theoret. 4=27208
laser, He—Ne, Zeeman and coherence effects 4=8982
liquefier, at Kharkov 2=7486
maser, optical, He–Ne, hole burning effect 2=11784
microwave absorption in compressed gas 2=13380
mixtures with Ar, potential parameters, from viscosity 1=14122
mixtures with O_2 and N_2, rotational relax. 3=6431
optically driven spin precession 1=8821
plasma pinch, cine film study 1=9586
plasma recombination in B-1 Stellarator 1=11924
plasma, Stark broadening of ion spectral lines 1=8809
quantum statistics approach 1=5385
Redhead vacuum gauge sensitivity, pumping rate 2=21954
second virial coeff. estim. 2=11414
shock tube study 2=7244
shock wavefronts, in shock tube 2=5048
shock waves in Ar–He mixtures, shock front structure 1=8154
solubility in liq. H_2, rel. to temp. and press. 2=17451
sound attenuation, in rarefied gas 3=5466
spark discharge, channel props. 2=22185
spectrum, Stark broadening in a plasma, calc. 2=3698
thermal conductivity, for negligible convection 2=5201
thermal cond. rel. to viscosity 2=11423
thermometer, effect of mag. field 2=23069
u.s. absorption 2=7256
gas, u.s. vel. meas., 3.5 Mc/s at 3500 atm 3=1728
u.s. vel. meas., 3.5 Mc/s at 3500 atm, rel. to compressibility 2=12946
vapour pressure regulator for low temps. 1=16185
velo., acoustic, in He gas, 4-14°K, for temp. meas. 4=16308
viscosity of pure gas and N-mixture, meas. to 1000°C and 600 kg/cm^2 4=24265
gas, viscosity, - 78.5° to 100°C, below 200 atm 3=7223
viscosity and thermal cond. of mixtures with A and Ne. 3=168
He—air, binary diffusion coeffs. 4=24267
He—Ar, binary diffusion coeffs. 4=24267
He—Ar supersonic jet recovery factor > either pure gas 4=27206
He—CO_2, binary diffusion coeffs. 4=24267
He—CO_2 mixture, absorpt. of sound rel. to vibr. relax. 4=14213
He—N, compressibility, 0 to 140°C, meas., Burnett method accuracy 4=11233
He—Ne confocal laser, radiation patterns 4=5847-8-9
He—Ne continuous laser, near i.r. props. 3=7317
He—Ne gas maser, optical output 3=525
He—Ne gas masers with external mirrors 3=9985
He—Ne, gaseous cascade laser 4=11824
He—Ne, laser action up to 57.355 μ 4=11823
He—Ne laser, gas discharge aspects 4=18718
He/Ne laser, intensity, var. with pressure and relative conc. 3=14805

Helium compounds
  He–H, vapour–liquid equilib. and temp. corrs. 3=24112
  HeH$^+$ electronic structure 1=14058
  HeH, excited states, $^2\Pi$ and $^2\Sigma$, orbital calc. 4=1262
  HeH$^+$ ground state, one-centre wavefunction 4=28187
  HeH$^+$ molecule ion, ground state 3=12821
  HeH$^+$, in stars, early, cannot explain 1600-2400A deficiencies 4=26909
  HeH^{2+}, oscillator strengths, perturbation calc. 0=7740
  HeH^{2+}, structure, perturbation theory calc. 2=2008
  HeNe$^+$, emission spectrum?, liquid air cooled hollow cathode lamp 3=12822

High pressure phenomena and effects
  absorption edge shifts in I—VII, II—VI, and III—V cpds. 1=8986
  actinide elements, effect on elec. resistance 4=7500
  alkali halides, compressibility, shock 3=18179
  alkali halides, effect on colour centres 0=13555
  alkali halides, M-centres, effects to 52 800 atm. 0=13556
  alkali halides, melting pts., 0-25 000 bars 0=2774
  alkali metals, resonance spectra in A at up to 1500 atm 0=5882
  alloys, light, mechanical props. 3=18157
  alloys, plasticity 0=1856
  anvil apparatus for 10^5 atm and 3000°C 1=12729
  anvil materials, effect on generation of high press. 4=10992
  apparatus, Bridgman opposed-anvil, press. multiplication 3=16469
  apparatus, cell for Raman spectra of gases 0=6932
  apparatus, with conical plungers 0=14359
  apparatus, cylindrical chamber, up to 10^5 atm 4=13999
  apparatus, cylindrical, high temp. high pressure 4=15998
  apparatus, deformation and elastic strength meas. 0=3385
  apparatus for electron spin resonance studies 3=24492
  apparatus for galvomagnetic obs. up to 30 000 atm. 4=15514
  apparatus using He as pressure medium, giving 18 kilobars 1=4166
  apparatus, nonmagnetic vessels, 20 000 kg/cm^2 0=3386
  apparatus for 3 × 10^4 atm at 1500°C 4=20997
  apparatus, up to 30 000 kg/cm^2, for testing metals 1=6685
  apparatus, up to 20 kbar and various temp. 3=23333
  apparatus, ultra high press. and temp. 0=4832, 8460
  Armco iron, yield point, effect of 10^3-10^4 atm 4=13416
  aromatics, condensed-ring, absorption spectra 0=15733
  benzene, spectrum, liquid and solid 4=22391
  Bridgman anvil devices, materials for ultrahigh press. sealing 4=26999
  d-camphor, phase transition, II–III, region of indifference 4=13510
  cell for optical studies 4=28658
  ceramics, defect healing under pressure 1=17548
  chain reactions, periodic pressure variations 2=4535
  chamber for high pressure expts. 3=7078
  checking hydrostatic conditions in h.p. chamber 2=17408, 19508
  collection of papers 4=27002
  colour centres induced in CaF$_2$ and BaF$_2$ 1=4995

High-pressure phenomena and effects—contd
  colour centres, spectra 0=9906
  compression apparatus, for super-high pressures, up to 2000°C 1=6686
  compressor for valuable gases 4=20999
  conductivity, thermal, meas., and high temp. 4=26568
  cryostat, liquid—He temp. 3=19081
  crystal electron structure meas. by optical absorpt. and elec. cond. 4=12667
  cyanine dyes, spectra shifts 2=22988
  diamond by direct conversion of graphite in static pressure apparatus 3=8793
  diamond structure, stability 2=14873
  diamond structures, melting curves and polymorphic transitions up to 50 000 atm 4=5448
  diphenyl, chlorinated (Aroclor 1260), dielec. relaxation 0=16702
  displacement force meas. for materials up to 100 000 atm pressure 1=1355
  e.s.r. spectrometer for crystals under high pressure 4=21663
  effect on spectra of Ni complexes 1=6206
  elastic behaviour of matter under very high pressures 1=3958-60
  elastic consts. meas., from u.s. velo. 4=26463
  elasticity of solids and liquids, meas. 4=7360
  elasticity of substance with cubic symmetry 0=16208
  for electric arcs under pressure 4=14618
  electric cond. of matter under high pressure 4=10019
  elec. cond. of Pr, Dy, Er and Yb 2=619, 10435
  electrical conductivity of solids, review 4=22658
  electric contacts, construction 2=24233
  electrical lead prod., epoxy coated 4=23987
  electrical lead in sealing 4=23988
  electrical measurements at low temp. 4=16394
  electrical resistance cell for pressures up to 500 kb 1=8288
  electrical resistance of fused-ring aromatic cpds. 2=18701
  electrical resistance of pyrolytic graphite 2=18633
  electrolytic cell assembly, elec. conductivity 2=4547
  equations of state, solids under ultra-high pressure 0=17866
  equations of state, rel. to Thomas–Fermi–Dirac atom theory 3=775
  equipment 3=18157
  ferrites, magnetic props. 4=4374
  ferrites, shock-wave-induced phase transformation 2=15057
  fluid valve 2=2690
  friction increase between solids 4=17720
  friction, teflon, on teflon and steel 3=6808
  fused salts, diffusion coeff. measurement 4=21120
  gas compressor, calibration 4=14191
  gas valve, 6000 atm operation 4=20998
  gauge, dead-weight type, with air loading device for var. pressures 4=24008
  gauges, resistance-strain type, for rock samples 4=15689
  glass, density and refract. index, to 160 kbar 1=12658
  glass to metal seal, and high temp. 4=23989
  glass, silica, high-pressure densification, effects of shear 3=8919
  glasses, oxide, densification, heat treatment 4=13409
  glasses, oxide, densification in rigid state up to 80 kbar 4=13408
  granite, effect on absorption coeff. for high-amplitude waves 4=15717
  graphite, contact resistance 4=20331
  graphite to diamond conversion, 130 kilobars, 3300°K 3=6819
  graphite, diamond formation by strong shocks 2=4360
  graphite, melting 3=9656
  graphite, melting point 3=6818
  graphite melting point var. 4=8500
  highly compressed matter, electron–ion interaction 1=17435
  highly compressed matter, electron-ion interaction 2=23096
  Holt's press, 10^5 atm at 2000°C, defects 4=20996
  hydraulic compressor 2=21775
  hydraulic compressor, for oil and water 4=14109
  hydrostatic pres. on remanent magnetization 3=23156
  ice VII, melting curve to 200 kbar 3=9655
  ionic crystals, pressure required for metallic transition, calc. 0=15802
  ionic crystals, transition to metallic state, calc. 2=6761
  limestone, thermoluminescence 0=10088

High-pressure phenomena and effects—contd
liquefied gases, neutron diffr. exam., sample cell 1=2745
liquids, microcell for i.r. absorption meas. 1=6955
liquids, specimen holder for neutron scatt. obs. 4=21095
low-temp. constant volume bomb using water–alcohol solutions 1=21167
magneto electric effect, metals at low temp. 3=24158
manganin, piezoresistivity 4=20334
manometers 0=6821
marble, effect on absorption coeff. for high-amplitude waves 4=15717
meas. in 100 kbar region, using refract. index of glass 1=12658
meas., by use of volume discontinuities, corrections 3=9404
measurement, wire transducer 4=18022
melting of metals 2=19777
metallic state, approach to 3=17812
metals, anomalies of electron props. 0=20764
metals, elastic constant variation with pressure 1=2503
metals, electron props 3=25218
metals, equations of state 4=6681
metals, shear strength, effect of hydrostatic pressure 0=18270
metals, thermal properties 1=8883
molecular crystals, solid phase transitions 2=1309
Mössbauer effect. press. depend., theory 1=19694
Mössbauer freq. shift meas. 4=12598
multiple-lead plug for high pressures 1=12728
multi-ring apparatus for 160 000 atm 1=10364
19 metals, eqn. of state, up to megabars 0=11548
nylon, pressure-induced transitions 3=23494
optical props. of organic phosphors 1=20019
optical rotation of solutions 4=29631
optical work at low-temps., bomb 2=7094
organic liquids, degassed, proton spin–lattice relaxation 0=16720
paramag. resonance of Fe-group ions in cubic crystals 1=7786
pentaerythritol, effect on crystal structure 2=21459
pentaerythritol, effect on crystal structure 3=3252
perlite–α–iron and ferrite, phase change meas. 0=1926
permittivity of solids, change with pressure 2=23494
phase equilibrium up to 50 kilobars and 1750°C 0=14041
phase transformation diagram for pressures up to 30 000 kg/cm^2 1=11581
phase transitions in NH_4 halides 1=9099
phase transitions in n-paraffins 1=2747
phase transitions in solid HCl, HBr, SiH_4 and SF_6 2=4357
phosphors, decay rate, up to 40 ooo atm. 0=8020
photographic emulsion grains, u. s. field effect 2=5192
piezometer, piston, up to 100 000 kg/cm^2 0=10459
piezopermittivity, definition and applications 0=16702
Plexiglas, linear compression effects 2=12848
polyethylene, pressure-induced transitions 3=23494
polyisobutylene, dynamic shear behaviour 0=18249
polymers, organic, semiconducting, piezoresistance 3=852
polymorphic transitions, a.f. and r.f. obs. 4=20695
polystyrene brittleness, 4=23198
polytetrafluoroethylene, pressure-induced transitions 3=23494
press , 5 × 10^3 atm operating pressure 4=20995
pressure ionization and theories of metals 0=15799
pressure shifts of optical absorption spectra from solvent data 1=8125
pressure-transmitting fluids, melting curves 4=23998
pressure vessel with internal resistance furnace 2=19759
quartz, prod. of amorphous form 0=6324
quartz, shock-wave compression 2=6727
on radiolysis of ionic nitrates 2=21090
rapid phase transitions, squeezer technique 2=23806
rare-earth elements, behaviour 4=17767
rare-earth metals, 11, elec. conductivity 4=10035
reaction kinetics, explosive decomposition, theory 2=6873
on resistance of Se and I 1=10050
rocks, elec. resist. to 40 000 kg/cm^2 and 400^0 temp. 4=22663
rubber, glass transition and Young's modulus 4=7454
rubber, pressure-induced transitions 3=23494
S-state ions, cubic field splitting 0=18218
S-state ions, proposed e.s.r. expt. under high pressure 0=11944

High-pressure phenomena and effects—contd
semicond. materials, elec. resistance of high-pressure phases 3=859
semiconductors, elec. and optical props., review 1=7630
semiconductors, impurity energy levels 2=23353-5
semiconductors, phase transition to cond. state 2=16704
semiconductors, piezoresistance 0=9977
shear-press, 50 k bars at 1000° C 4=23986
shear in solids, high press. measurement 4=17717
shock wave attack, opaqueness rendering, obs. 1=20388
shock-wave compression of metals, using projectile from helium gun 1=9090
shock waves in solids and liquids, X-ray study 2=12847
solid body props. depend. 0=13495
solid–solid transitions 2=10778
solids, crack opening, internal stress distrib. 2=6726
solids, eqn. of state at $\sim 10^6$ atm 1=3610
solids, eqn. of state at $\sim 10^4$ atm 1=9983
solids, eqns. of state, using statistical model 4=6677
solutions, aq., charge-transfer and transition metal ion spectra 3=1690
on spectra of crystalline UF. and UF_3 1=3834
on spectra of rare earth ions in crystals 1=3834
spectra of transition metal ions in MgO and Al_2O_3 1=14589
steels and alloys under hydrostatic press., mech. props. 0=18271
strain meas. tensile, optical silhouette, under high hydrostatic pressure 3=13343
strongly compressed matter, lattice spectrum 1=17434
synthetic diamond production 1=5092
tetracyanoquinodimethane, properties 4=30602
in tetrahedral anvil device, pres. distrib., hystersis 3=7168
thiourea, ferroelec. props. 4=26130
Thomas—Fermi atom, thermodynamic functions 1=3501
tourmaline, Z-cut, piezoelec. sensitivity, 7 kbar 4=22782
transition-metal oxides and sulphides, elec. cond. 3=25370
triglycine sulphate and selenate, ferroelectric props., up to 2700 atm. 0=4379
u.s. velocity in solids, meas. apparatus 4=16189
ultra-high pressure production at low temp. 4=20994
valves, frozen blocked capillary 4=24000
various materials as pressure transmitters 2=24235
viscosity of pressure transmitting fluids, up to 10000 bars 4=23999
vitrification under high press. and temp. 0=12060-1
work at National Physical Lab. 2=1037
X-ray diffraction apparatus 4=15779
X-ray diffr. studies, to 100 kbar 2=8811
X-ray rotation chamber 1=5094
zinc-blende structure, stability 2=14873
zincblende structures, melting curves and polymorphic transitions up to 50 000 atm 4=5448
Al, compressibility and sound velocity, 0.4 - 3.5 × 10^6 atm. 0=11974
Al, effect on absorption coeff. for high-amplitude waves 4=15717
Al, fusion curve 3=6814
Al, internal friction depend. 2=18985
Al, polycryst., residual press. effects 4=23120
α-Al_2O_3, γ-irrad., thermoluminescence 3=23129
Al_2SiO_5 system, press-temp. curves 4=29002
Ar, pressure-density isentropes 1=11785
Au, vacancy annealing, pressure effects to 10 000 kg/cm^2 1=8904
Au, vacancy formation, 400-11000 atm. 3=8430
Au wire resistance, effect of N_2 gas press. 2=10433
Ba, crystal structure 4=4596
Ba, phase transformation, electronic, 50 000-60 000 atm., calc. 3=23372
$BaTiO_3$, absorption edge 0=4405
$BaTiO_3$, dielec. props. near Curie point 0=18103
$BaTiO_3$, ferroelectric Curie point reduction 3=22994
$BaTiO_3$, ferroelec. props. 2=10560
$BaTiO_3$, ferroelec. props., effect of one-dim. pressure 2=2209
$BaTiO_3$, modified, 0-10000 psi. effect on dielec. and piezoelec. props. 4=26117
$BaTiO_3$, structure rel. to hydrostatic pressure up to 600 kg cm^{-2} 3=6848
Bi, crystalline modifications 2=7482
Bi, low-temp. phase transitions 2=7482, 9483

High-pressure phenomena and effects—contd
Bi, on magnetoelectric props. 0=20913
Bi, on oscillation effects 4=28760
Bi, polycryst., structure under 20,000 atm. 3=16017
Bi, press-induced polymorphs, structural and transform. characts. study 4=30795
Bi, shock wave compression to 100 kbar 1=9090
BN, synthesis of cubic form 1=6498
Bi—Sn(50/50) phase transform., melting pt. obs. 4=20697
Bi_2Te_3, energy gap variation with pressure 1=14209
C in Fe, influence on time of stay 1=6118
C, new phase above 150 kbar 3=18229
CH_4, melting pt. at 300 atm 1=919
$CaCO_3$, e.s.r. of Mn^{2+}, up to 7000 atm. 4=1880
$CaMgSi_2O_6$, diopside, melting curve 3=9657
Cd, supercond., up to 27 000 atm 4=401
CdS, elec. conductivity 3=15588
CdS, single crystals, light absorption edge shift 2=2225
CdSe, melting and polymorphic transitions 3=16016
Cd_2SiO_4 phase transform., olivine—spinel 4=30797
CdTe, melting and polymorphic transitions 3=16016
Ce, critical point for phase transition 1=14938
Ce, effect of pressure on elec. resistance 1=14356
Ce, effect of pressure on elec. resistance 1=17604
Ce, I—II, rel. to crit. end point 4=17757
Ce, phase transformation diffusion, $\alpha - \alpha'$ 4=4503
Ce, polymorphic, under pressure 1=10226
Co, mag. order, thermal neutron scatt. meas. 4=28794
Co magnetization 4=13170
$CoCO_3$, Curie point shift 2=18926
CoF_2, Curie temp. shift 0=8073
CoO, elec. resistance variations 1=1024
Cr, brittleness, up to 10^4 atm 4=23133
$CrVO_4$, atomic structure, from X-ray diffr., rutile 3=11270
CsCl, F-band shape under 6200 atm 4=20313
CsCl, pressure required for metallic transition, calc. 0=15802
CsCl, use for transmitting high press., at high temp. 0=3387
CsI, effect on absorpt. spectra of F and M centres 4=15502
CsI, transition to metallic state, calc. 2=6761
Cu, compressibility and sound velocity, at $0.4 - 3.5 \times 10^6$ atm. 0=11974
Cu, pressure-bonded, interfacial voids 3=16114
Cu, pure, recrystallization kinetics 3=6866
Cu, stress/strain relns., effect of pores 4=23146
CuO, elec. resistance variations 1=1024
Cu_2O, elec. resistance variations 1=1024
Dy, elec. conductivity, effect of very high pressures 2=10435
Er, elec. conductivity, effect of very high pressures 2=10435
Fe, cohesive energy and eqn. of state 0=4257
Fe, compressibility and sound velocity at $0.4 - 3.5 \times 10^6$ atm. 0=11974
Fe, effect of strong shock pressures 2=23846
Fe, intrinsic magnetization, to 11 000 kg/cm² 3=6700
Fe, Mössbauer effect of Fe^{57}, up to 240 kbar 4=28327
Fe, Mössbauer spectrum of Fe^{57}, up to 140 kbar 4=9814
Fe, n.m.r. up to 65 000 atm 3=11123
Fe, shock wave compression to 100 kbar 1=9090
Fe—C alloys, austenite, isothermal transform. 3= 11286
Fe—Ni, austenite—martensite phase transitions 4=23267
Fe—Ni alloys, effect on phase transformation 1=6531
Fe—Ni system, phase equilibria 2=2399
Fe—Si alloys, magnetic anisotropy under hydrostatic pressure 1=6279
Fe—Si phase transformation, var. with Si content 4=7497
$FeVO_4$, atomic structure, from X-ray diffr. using orthorhombic unit cell 3=11270
Ga, fusion curve and polymorphic transition 3=6814
Ga, superconducting modification meas. 4=8567
GaAs, spontaneous and stimulated emission 3=25495
$Ga(As_{1-x}P_x)$, n-type conductivity, up to 15000 atm 4=17487
Gd, Curie temp., up to 40 kbar 4=13183
Gd, ferromag. suscept. calc. 4=28789
Gd, phase transformation and ferromag. reduction 4=15733
Ge, band structure calc. 3=22682
Ge, direct energy gap, to 7000 kg/cm² 1=17447

High-pressure phenomena and effects—contd
Ge, elec. cond. on n-type, to 30 000 kg/cm² 1=14448
Ge, impurity energy levels, Au 2=23355
Ge, n-type, Hall effect and resistivity 0=584
Ge, n-type, hot electron phenomena 0=11689
H, solid, under high pressure, elec. cond. 4=10019
H_2, diatomic bond destruction, calc. 0=15767
H_2, i.r. band profile in pressure-induced absorption 4=20044
HCl, aq. soln., elec. cond. activation energy 4=2706
helium, gas, gasifier for obtaining pressures up to 100 atm. at low temps. 3=12013
He, ionization coeffs. 4=14576
He, liquid, atomic distribution 0=12542
He, solid, transition into metallic state 2=11551, 13501, 22109
$He^{3,4}$, melting curves 0=228
Hg, liquid—α and $\alpha-\beta$ transitions 3=18227
HgSe phase transform., from elec. props 4=23278
HgSe, phase transition 3=3253
HgTe, melting and polymorphic transitions 3=16016
I_2, diatomic bond destruction 0=15767
I_2, elec. resistance, up to 200 000 atm. 1=3729
In, crystal, elec. field var., n.q.r. and thermal expansion meas. 4=28313
In, fusion curves to 10^5 atm. 0=9840
InAs, effect on elec. props. 3=17886
InSb, effect on elec. props. 3=17886
InSb, effect on elec. resistivity and melting pt. 1=6160
InSb, phase transition 4=17758
InSb, thermoelec. power, up to 16 000 atm. 4=1699
In_2Te_3, effect of press. on elec. and thermoelec. props. 0=13615
K, elec. cond. depend. over 500 kbar 4=1559
K, elect. resist. at low temps. 3=828
K, melting point. 0-30 000 kg/cm² 0=15808
KBr, phase transformations, from compressibility, shock 3=18179
KCl, aq. soln., elec. cond. activation energy 4=2706
KCl, phase transformations, from compressibility, shock 3=18179
KCl, polymorphic transition calc. 2=14922
KNO_3, polymorph transition rates 3=20772
KOH, aq. soln., elec. cond. activation energy 4=2706
Kr melting pt. at 300 atm 1=919
La, effect of pressure on elec. resistance 1=14356
La, effect of pressure on elec. resistance 1=17604
Li, elec. cond. depend. over 500 kbar 4=1559
Li, elec. resist at low temps. 3=828
Li, self-diffusion to 7000 atm 2=10415
LiH, phase transformation, metallic, calc. 4=10432
LiH, polymorphic transition calc. 2=14922
LiH, polymorphism, < 6 k bar? 3=8794
Mg, volume and lattice param., up to 300 kbar 4=29120
MgO, paramag. resonance of Fe-group ions in 1=7786
MgO, paramag. resonance of Mn^{2+} and Fe^{3+}, cubic field splitting 0=18218
$MnCO_3$, Curie point shift 2=18926
MnF_2, Curie temp. shift 0=8073
Mo, on ductile—brittle transition 4=23276
NH_4F phase transition at 3800 atm pressure 1=7833
Na, elastic consts. 0=13904
Na, elec. cond. depend. over 500 kbar 4=1559
Na, elec. resist. at low temps. 3=828
Na, self-diffusion to 7000 atm 2=14015
Na, 20 000 atm, equation of state 1=19728
$NaAlSi_3O_8$, albite, melting curve 3=9657
NaCl, effect of sudden pressure on elec. cond. 0=17993
NaCl, Grüneisen constant 3=4827
NaCl. Gruneisen vel., anharmonicities 4=15432
NaCl, inclusion of Cu atoms 3=10651
NaCl, powder, colour centres generation 2=12467
NaCl, pressure required for metallic transition, calc. 0=15802
NaCl, as pressure-transmitting medium 3=5308
NaCl, structure change to CsCl-type at 18 000 kg/cm² 2=23804
NaCl, structure change to CsCl-type at 18 000 kg/cm² 3=6811
NaCl, transf. to cubic CsCl structure 3=16015
Nb_3Sn, supercond. transition temp., pressure effect 4=5526
Nb_3Sn, superconductivity var. 4=18619

High-pressure phenomena and effects—contd
- Nb—Zr alloys, supercond. transition temp., pressure effect 4=5526
- Nd, effect of pressure on elec. resistance 1=14356
- Nd, effect of pressure on elec. resistance 1=17604
- Ni, effect on elec. resistance 1=7613
- Ni, intrinsic magnetization, to 11 000 kg/cm^2 3=6700
- Ni, metal—insulator—metal, press. transformation 4=6928
- Ni, saturation magnetostriction to 10^4 atm 3=1150
- Ni wire resistance, effect of N_2 gas press. 2=10433
- NiO, elec. resistance variations 1=1024
- Ni_2SiO_4 phase transform., olivine—spinel 4=30798
- Ni—Zn ferrites, elec. resist., pressure depend. 3=4940
- O_2, i.r. and red atm. absorpt. band systems 4=6578
- O_2 and $(O_2)_2$ absorpt. spectra, 2-35 atm, 12600-3600A 4=25677
- P, elec. resistance, up to 200 000 atm. 1=3729
- P, phase transition, I—II, region of indifference 4=13510
- Pb, compressibility and sound velocity, at $0.4 - 3.5 \times 10^6$ atm. 0=11974
- Pb, polymorphism 3=8883
- Pb, superconducting critical field, up to 650 atm 1=7001
- Pb, superconducting transition temp., up to 10^4 atm. 0=8939
- PbTe, effect of pressure on electrical props. 4=12904
- $Pb(ZrTi)O_3$, modified, 0-10000 psi. effect on dielec. and piezoelec. props. 4=26117
- Pr, elec. conductivity, effect of very high pressures 2=10435
- Pu, α, conductivity, elec. 4=15522
- Pu, phase diagram, triple points to 35 kbar 4=2001
- Rb, elec. cond. depend. over 500 kbar 4=1559
- RbBr, effect on absorpt. spectra of F and M centres 4=15502
- RbCl, effect on absorpt. spectra of F and M centres 4=15502
- RbCl, F-band shape under 6200 atm 4=20313
- RbF, effect on absorpt. spectra of F and M centres 4=15502
- RbI, polymorphic transition calc. 2=14922
- S, elec. cond., effect of short pulses 4=2515
- S, melting point, 20-60 kbars 4=24437
- Sb, phase transitions 4=29003
- Se, elec. cond., up to 30 000 atm. 0=613
- Se, oxygen free, elec. cond. up to 25 000 atm. 0=614
- Si 4=12895
- Si, impurity energy levels, As, In, Al 2=23353
- Si, impurity energy levels, Au 2=23354
- Sn, diffusion, self, vacancy jump mechanisms 4=30580
- Sn, fusion curves to 10^5 atm. 0=9840
- Sn, Sn—Pb crystal whisker growth 4=13552
- Sn, superconducting transition temp., up to 10^4 atm. 0=8939
- SnTe, phase transform. 4=17770
- Sr, at 35 kbar to b. c. c., rel. to Yb 4=4624
- Te, phase transformations 4=13503
- Te, plane transformation, liquid to metallic 3=19066
- Te^{99m}, decay rate in Tc metal, calc. 0=5718
- Th—In phase diagram to 5.5 kbar 3=20886
- TiO_2, absorption edge 0=4405
- Tl, fusion curve and polymorphic transition 3=6814
- Tl, superconducting transition temp. depend. 3=21668
- Tl, superconducting transition temp., up to 10^4 atm. 0=8939
- Tl halides, effect on elec. resistance 2=18651
- U, phase transformations, up to 45 kbar 3=8795
- V, stress relaxation in samples containing interstitial O and N 1=2396
- V_3Ga, superconductivity var. 4=18619
- VO, effect on metal-to-insulator transition 3=1254
- V_2O_3, effect on metal-to-insulator transition 3=1254
- V_3Si, superconductivity var. 4=18619
- V-T relation for gases 1=6903
- WC, hardness, X-ray diffrac. line widths, defects, at 2400°K 4=22592
- Xe, melting pt. at 300 atm 1=919
- Yb, elec. conductivity, effect of very high pressures 2=10435
- Yb, 20-40 kbars, semiconductivity 3=17899
- Zn, Ettingshausen—Nernst effect at 4.2°K 0=13582
- ZnS, luminescence 3=18035
- ZnS, paramag. resonance of Mn^{2+} in 1=7786
- ZnS:CdS:Ag, luminescence 2=21271
- Zr, inhibition of whisker growth, by h.c.p.—b.c.c. phase transform. cycling 4=13554
- Zr, supercond. props., up to 24 000 atm 4=18623
- ZrO_2, tetragonal—monoclinic transformation 4=10443

High-speed photography

- induction heater for melting pure materials 2=22083
- isentropic exponent, reduction by electron pair prod. 4=14469
- Knudsen furnace, electron-bombardment type 1=10626
- liquids, specimen holder for neutron scatt. obs. 4=21095
- localized prod. ~10^{7}° with laser beam 4=14433
- magnetic materials, review 1=7762
- magnetostrictive ferrites, effect on acoustic props. 4=24314
- materials, for high temp. studies of creep and fatigue 4=26474
- metal combustion 3=21602
- micro furnace, for microscopy and X-ray anal. 4=18471
- microfurnace, power supply 1=16213
- oven thermostatic control, 1400°C 4=16280

High-temperature production and effects—contd
ovens for vacuum treatment of metallic samples 1=13017
oxide resistor furnace 1=6983
plasma jets, He, Ar 3=21602
plasma torch, h.f. 3=7590
plasma torches and furnaces, conference 4=24420
high temp. prod. by torsional vibration of metal rod 1=14852
high temp. prod. by torsional vibration of metal rod 1=20311
review of research 4=18470
by solar energy conc. by conical mirror 4=21347
space vehicles, plasma sheath at hypersonic speeds 2=4881
sparks, electric 3=4053
synthetic diamond production 1=5092
thermal shock behaviour of brittle materials 1=11172
thermionic emission of positive molecular ions 2=3086
2200°C inside electron microscope, temp. control 3=25787
ultrasonic, in metals and alloys, using internal friction 4=11398
vacuum furnace 1=4507
vacuum furnace glow discharge elimination 1=6985
vacuum melting apparatus 4=8490
vacuum radiation furnace for sublimation crystal growth 1=6984
vector magnetization, meas. instrument 3=464
C, phase transformations, graphitization of pyrolytic C 4=7476
C, strained, 1000°—2000°C, elementary atomic layer diameter 4=29103
C, Young's modulus measurements 4=23131
Ce, phase transformation diffusion, $\alpha-\alpha'$ 4=4503
NaCl, powder, colour centres generation 2=12467
WC, hardness, X-ray diffrac. line widths, defects at 2400° K 4=22592
High voltage production
(Heading introduced in 1962).
for accelerator, variable 40 kV supply 4=16574
cascade accelerator, regulation with braking gap 2=5409
cascade generator, symmetrical 4=16575
cascade generator, travelling-wave, for accelerators 2=9658
Cockcroft—Walton machine, voltage stabilizer 3=9882
electrified particle stream under internal pressure 2=19882
electrostatic generator, optimum main and counter - e.m.f. 4=24537
generation by h.f. oscillations 2=5254
potentiometer and standard cell with feedback 4=29850
pulsed voltage multiplier 2=19833
regulation, feedback corona regulator 4=8604
spark-chamber electronic triggering circuits 4=9028
stabilizer circuit 3=24165
transistorized regulator, 300 to 1500V 4=29849
transistorized stabilized power supply 0-2000V 3=14481
voltage breakdown prevention by inclined fields 3=9884
History
aerials (1939-45) 2=16047
aerials and e.m. propag. (1945-61) 2=16049
aerials and propag. field up to 1918 2=16043
aerials and propag. field (1918-39) 2=16045

Holmium
antiferromagnetism, press. var. 4=20567
atom, in ethyl sulphate, h.f.s. splitting 3=10572
atom, h.f.s., nuclear moments of Ho^{65} meas. 4=17003
atomic beam mag. resonance 1=9900
cohesive energy 1=14143
crystal line compounds, electronic structure, Ho^{+3} in cubic potentials and exchange field, calc. 4=6695
crystals, elec. and mag. props., 1.3°-300°K 2=21098
elec. resistivity, 1.3-300°K 0=18002
ferromagnetic—antiferromagnetic transition, crit. fld. meas. 3=17022

Holmium—contd
- ferromag. screw struct. and transitions 3=975
- filter for recording spectrophotometer wavelength scale 1=10591
- fluorescent yield of L-shell 4=3774
- galvanomagnetic props. 2=21106
- half-life, positron spectra 2=3520
- heat capacity of metal below 1°K, and h.f.s. parameters 4=9856
- hydrogenated, susceptibilities, atomic moment 2=12736
- lattice parameters, temp. depend. 3=15444
- luminescence, Ho^{3+} doped 1% in fluorides, i.r. excited 4=28718
- luminescence in thoria 2=14733
- mag. behaviour, 300-1500°K 0=11810
- mag. remanence, molec. field, and approach to saturation at low temp. 0=4472
- magnetic structure detm. by neutron diffraction 3=1108
- mag. susceptibility, 300°-1500°K 3=11033
- magnetization, high field effects, and internal fields 4=13109
- magnetoelastic properties 3=11091
- magnetostriction, in fields up to 15 000 Oe 2=21331
- magnetostriction, in flds. up to 15000 Oe 3=8680
- magnetostriction, large 3=20550
- magnetostriction, 20.3, 77°K 3=18118
- neutron diffraction by helical spin structures 1=6346
- paramagnetic susceptibility 2=8828
- solubility in solid Cu, Ag, and Au 4=13459
- specific heat, at 0.5-4°K 2=2051
- specific heat, 0·95–4·2° K, nuclear contrib. 1=17424
- spectra, energy levels, Landé g factor 1=17891
- Ho in molten Ho trichloride, elec. cond. irregularity 4=8220
- Ho^{165}, microwave spectrum 2=14194
- ions, Ho^{2+}, in MeF_2(Me = Ca, Sr, Ba), absorption and emission spectra 4=13038
- Ho^{2+} e.s.r. in CaF_2 4=26433
- Ho^{2+}, e.s.r. in CaF_2 meas. 3=13301
- Ho^{3+} in crystalline salts, u.v. absorpt. 3=3008
- Ho^{3+}, electron structure, free and in cryst. field 3=8378
- Ho^{3+} ion, energy levels 1=17253
- Ho^{3+} in $LaCl_3$, absorp. and fluoresc. spectra rel. to energy levels 4=30685
- Ho^{3+} in soln., near i.r. transitions 3=23885

Holmium compounds
- crystal structure and mag. props. of 7 cpds. 2=8828
- garnet, magnetic structure 1=2482
- solid solution garnet spin arrangement investigation 3=11099
- Ho^{3+} chelate, fluorescence spectrum 0=16084
- Ho ethylsulphate, cond. thermal, mag. field peaks and spin–phonon interactions 4=17385
- Ho ethyl sulphate, effect of mag. field on thermal resistance 2=16618
- Ho ethyl sulphate, i.r. absorp. spectrum and Zeeman effect 2=12605
- Ho ethyl sulphate, thermal cond., mag. field depend., theory 2=14397
- Ho ethyl sulphate, thermal cond., phonon dispersion 3=10613
- holmium ethyl sulphate, zero field splitting 3=8600
- Ho oxide, as wavelength standard 2=15735
- Ho^{3+} in salts, spectrum, Zeeman effect, and electron levels 1=19987
- $HoAl_2$, mag. moment and Curie pt. 3=991
- Ho–Al, $HoAl_2$, $HoAl_3$, HoAl, struct. 4=23240
- $Ho(C_2H_5SO_4)\cdot 9H_2O$, absorption spectrum, nuclear h.f.s. 1=1158
- $HoCl_3.6H_2O$, electron specific heat and upper-ground state levels 2=16606
- $HoCl_3.6H_2O$, specific heat 1.2-230°K 1=9979
- $HoCo_5$, antiferromagnetic props. 3=15731
- $HoCo_5$, mag. structure 3=8682
- HoD_2, magnetic structure 3=15911
- HoD_3, neutron diffn. structure analysis, comparison with X-ray diffn. 4=29112
- HoFe garnet, absorption and reflectivity meas. 0=10045
- HoFe, garnet, far i.r. absorption spectrum 3=15680
- HoFe garnet, ferromag. resonance theory 0=1820
- $HoFeO_3$ and Ho_2O_3 ferrimag. and antiferromag. props., 1.3-300°K 0=13839
- $HoFeO_3$, mag. props., neutron diffr. study, 1.25-955°K 0=10187

Holmium compounds—contd
- $HoFeO_3$, magnetic domains by Kerr effect 3=18103
- $HoFeO_3$, perovskite-type, Mössbauer effect 4=3961
- Ho–In, nuclear polarization, neutron transmission study 2=18511
- $HoIr_2$, mag. structure, by neutron diffr. 3=23185
- $HoIr_2$, molecular moments, neutron diffn. meas. 4=28829
- HoT, where T=Mn, Fe, Co or Ni; preparation and structure 1=7877
- Ho_3T, where T=Mn, Fe, Co or Ni; preparation and structure 1=7877
- HoT_2, where T=Mn, Fe, Co or Ni; preparation and structure 1=7877
- HoT_5, where T=Mn, Fe, Co or Ni; preparation and structure 1=7877
- Ho–Mn alloys, structure and mag. props. 2=12925
- $HoMn_2$, antiferromagnetic props. 3=15910
- $HoMn_5$, magnetic characteristics 1=9024
- HoN, ferromag. resonance, model 3=13292
- HoN, mag. ordering, neutron diffraction study 0=11849
- HoN, temp. depend. of spontaneous mag. 3=13245
- Ho_2O_3, neutron scatt., energy distrib. 3=743
- Ho_2O_3, neutron scattering and Stark effect 0=20776
- Ho_2O_3, specific heat and thermodyn. props. 3=20106
- HoP, magnetic props. 4=28773
- $Ho_{5\cdot04}Pd_{1\cdot96}$, magnetic transition, para- to ferro-, below 27°K 4=13220
- Ho–Y, adiabatic demagnetization 1=11414
- Ho–Y, mag. props,. 4.4-300°K meas. 4=1808
- Ho–Y garnets, ferrimagnetic props. 1=14750

Humidity
- See also Atmosphere, humidity; Hygrometers; Moisture.
- air, and absorption, acoustic 4=14215
- air, and acoustic absorption and dispersion 4=8253
- air, effect on electron attachment and elec. breakdown 0=5277
- conditioning atmospheres control 2=15440
- control device for Buerger precession camera 1=20456
- dewpoint measurement below −86°C 1=5380
- effect on microchemical balances 1=103
- expressed in Celsius-gramme-metre system 0=947
- gut string, effect on frequency 0=5111
- heavy water, psychrometer table 1=9505
- measurement devices 3=1573-4
- meas. by heat exchange of a cooled thermistor 1=1508
- in porous materials, correlation with vapour pressure, moisture content and temp. 4=10592
- power spectrum, from aircraft and balloon meas. 0=16477
- spark formation in Rosenblum counter, humidity dependence 1=13212
- and sunlight, theory 4=4769
- Al alloy, effect on fatigue 4=23125
- Ge, surface conductivity, influence of humidity 1=14431

Hydrodynamics
- See also Flow, liquids; Jets; Liquid oscillations; Liquid waves; Magnetohydrodynamics; Viscosity, liquids.
- accelerated fluids, dynamic instability 0=920
- acoustic–gravity waves, rel. to elasticity theory under initial stress 3=18781
- acoustic hydrodynamic radiator, cavitation 4=24312
- acoustic radiator, high intensity 4=14273
- acoustical equations, integration 3=23917
- adiabatic jets, Howard's circle theorem 3=21294
- aeroelasticity, non-rigid aircraft components, hydrodyn. problems 0=16724
- angular momentum of continua, antisymmetric tensor treatment 2=1087
- apparent mass, object moving through He II 0=8905
- atmospheric motions, relax. method for eqns. 2=17136
- axisymmetric boundary layers, transition patterns 0=921
- bodies, movement in cylinder of stationary fluid 1=18362
- boundary conditions at surface vaporizing at high temp. and press. 4=24445
- boundary-layer growth on cylinder, heat transfer effect 4=122
- boundary layer, laminar, rotating sphere, in non-Newtonian fluid 3=9409
- boundary layer, periodic, non-steady 2=11325
- boundary layer theory 0=8617
- boundary layers, three dimensional 3=9415
- boundary problem, solution 2=5439
- broadside motion of flat plate in viscous liquid 0=19057

Hydrodynamics—contd
bubbles, "dimpling" near rigid interface 2=9252
chain-macromolecules, flexible, in hydrodynamic field with parallel vel. gradient 4=6670
chemically reacting fluids 0=14109
circulation in liquid drops, theory 0=8643
circulation preserving motions 1=9369
classical field eqns., analogue 2=19514
classical, Schrödinger eqn. 2=19431
collisionless, in noninertial reference system 4=23882
compressible fluid flow, theory of characteristics 3=98
compressible fluids, variational principles 1=4303
convection element, thermal, two-dim., shape-preserving 4=16272
convectional instability of a vertical layer mixture under gravity 4=11155
convergence of space integral of hydrodyn. variable 0=6738
cosmic-ray showers, two-centre model 2=7915
cosmic-ray showers, two-centre model 3=6107
Couette flow, inviscid plane 0=8608
Coulomb system, statistical derivation 4=5126
cylinder, expanding; resulting fluid motion 3=107
cylinder motion in viscous liquid at small Reynolds numbers 1=18355
derivation of eqns. from motion of collective coordinates 2=1104
differential operators, Lagrange bracket symbols 4=8133
dimensional analysis, use of governing eqns. 3=16578
discontinuity conditions across discontinuities, shocks and phase fronts 4=21071
drag reduction on boiling 2=15817
drag of screen, at low Reynolds number 1=2736
drops moving through liquids, wake configuration 1=10482
drops on rigid walls, impact, theory 4=2646
"dynalpy" tensor, definitions, applications 3=14102
Ekman layer role in rotating annulus regime 4=21074
elasticity analogy 2=9214
electrohydrodynamic flow, laminar, in annual channel 4=5768
electrolyte solutions, rotational mechanical moments 1=15864
electrolytes 4=21116
electrolytes, symmetrical, hydrodynamic term in relaxation field 4=10643
electron beams, intense, conservation laws, theory 2=7664
energy dissipation theorems 1=16518
entrance region in tubes and ducts 4=14104
entropy production, min., calc. 4=27393
equations, rel. to elastic collisions 3=7497
equations of relaxational hydrodynamics 1=110
explosion at surface of liquid 3=118
explosion at surface of liquid 3=5422
falling spheres, in liq. He 1=6992
filtration, non-stationary, one-dimensional eqn. 2=21886
float, vertical velo. meas. 4=27141
flow through annular space between concentric
flow demonstration 0=917
fluid-displacement eqns. for acoustic-gravity waves 3=16581
fluid–gas dynamics, similarity solns. 0=4991
fluid interface in bent channel, det. 1=18360-1
fluid layer instability in its own gravitational field 2=16
fluid, perfect barotropic, turbulent islet consts. 1=15802
fluid, rotating polytropic 3=16577
fluid sphere moving in viscous liquid, theory 2=1120
fluids, ideal baraotropic flow 2=4988
fluids, thermal agitation and turbulence 2=2678
force and moment on cylindrical obstacle in viscous fluid 4=27145
forced oscillations in a rotating liquid 3=9428
forces exerted on oscillating immersed bodies, meas. 1=6842
forces round non-spherical bodies rel. to sound field theory 1=18514
functional kinematics, hypersolid motion 0=16673
gas analogy for simultaneous exchange of momentum, heat and mass 0=19177
gas, isotrope of tension of acoustic radiation 2=19617
gases, friction on rotating disk 2=1177

Hydrodynamics—contd
gravitating fluid sphere, in elec. field 0=7206
gravitational instability, infinite cylinder, surface disturbances 3=23698
gravity waves, in circular cylinder 3=14123
group theory appl. to one-dimensional problem 4=24253
growth of instabilities in displacement processes in porous media 1=4304
high turbulence levels, mean-velocity and turbulence meas., corrections 0=12408
hydraulic jump in rotating fluid 4=18152
hydraulic models, water wave recording instrument 4=18163
hydraulic oscillators, for dynamic calib. of pressure recorders 0=3587
ideal fluid, one-dimensional relativistic motion 0=879
ideal incompressible liquid, non-steady planar motion 1=6828
ideal incompressible liquid, non-steady planar motion 1=10480
impulsive motion of sphere in viscous fluid 4=29581
incompressible fluid sphere of varying density oscillations 0=14601
incompressible fluids, equations of motion and vortex eqns, in corresp. form 4=8139
incompressible viscous fluid, Lagrangian eqn, 3=16588
instability of motion of viscous incompressible fluids 4=11146
instability, Rayleigh–Taylor, compressible fluids 4=18140
instability of viscous, thermally cond. and rotating medium 1=15606-8
interstellar matter in stability, cylindrical in another plasma, in mag. fields 4=10860
iso-amylol—water boundary mass transport, stability effects 4=24193
jet–surface interaction, molecular kinematics 0=6737
Kelvin—Helmholtz instability, effect of magnetic field and rotation 1=15787
laminar boundary layer behind strong shock 2=1182
laminar flow, dispersal theory 3=23847-8
laminar, oil–protein contact, Schaefer instability 2=1128
laser induced effects 4=2895
layer of liquid on vertical wall, stability under gravity 1=18358
linear response eqns. for many-body systems, rel. to correl. functions 4=5104
liquid (ideal) wave propag. over bed of variable depth 2=13315
liquid interface, approach of liquid drop 2=2694
liquid phase boundary under conditions of material transfer 3=3800
liquid, rotating, surface profile 3=23845
liquid solutions in rotating elec. field 1=5253
liquid sphere, relativistic analogue 0=6645
liquid threads in viscous liq., break-up 2=11344
liquids, electrically insulated, electrical conductivity 1=18429
liquids, electrically insulated, electrical conductivity 2=21923
liquids, linear dissipative processes 2=9256
of lubrication, elasto-hydrodynamic theory 1=15785
Maclaurin spheroid, viscous, stability to oscillations 3=14117
macromolecules, semihard, in solution 2=11330
mech. working of liquids, effect on surface tension 0=72
melting of semi-infinite solid, by hot gas stream 0=19503
mineral oil lubrication of Perspex 2=19533
minimum theorem, validity 0=2147
model for nucleate pool boiling stagnation flow 2=15815
momentum eqns. for variable mass system 2=19485
motion of fluids with density stratification 0=12154
movement of a thin plate parallel to a plane, non-stationary 4=123
Navier–Stokes eqn., existence, uniqueness of solution 2=21869
Navier—Stokes eqn., linearized, complete soln. 3=23836
Navier–Stokes eqn., time dependent, weak soln., interior regularity 0=16672
Navier–Stokes eqn. for viscous fluid 2=13234, 19365
Navier–Stokes eqns. for small viscosity 2=21870

Hydrodynamics—contd
non-linear Couette flow, vortex harmonic obs. at high temps. 4=5127
nonlinear problems, theory of stability 2=21877
non-Newtonian, boundary layer 3=23832
non-Newtonian fluids, Weissenberg and Merrington effects 4=136
non-Newtonian viscous, with variable cross-viscosity coeff. 1=111
non-relativistic, mass-tensor uniqueness 3=1665
nonrelativistic, unicity of mass tensor 4=121
nonuniform rotation, gravitational instability 0=10474
numerical, use of tenor artificial viscosity 4=8132
oscillating fluid, behaviour of particles 3=7181
oscillating liquid columns, viscous damping 4=138
oscillations in variable infinite canal 0=922
oscillations of viscoelastic fluid, in circular tube 0=2151
paraffin molecules dissolved in CCl_4, Brownian rotation 4=11160
parent liquid viscosity, rel. to suspended macromolecules 1=18359
particle oscillations in fluid wave 2=13317
phase boundary streaming, Schlerein obs. 4=27146
piston movement in inhomogeneous medium 2=7174, 11323
Pitot tubes 1=18382
plane-potential motion, analogy with motion of particle 2=1086, 7150
plasma, collision-free, hydromagnetic disturbances 0=19679
plasma, differences between derived eqns. 2=5338
plasma, relativistic, polyliquid eqns., with radial particle braking 4=18107
polymer macromolecular solutions 0=12405
potential flow with circulation, resistance 2=7184
power-law fluid, motion of sphere, dissipation energy 2=7176
pressure at fixed point in moving fluid 2=4987
pressure system moving over deep water 0=8630-1
pressure vessel, high, incorporating Teflon gasket 1=18344
profile movement quadrature integration 4=16077
quantum systems of diatomic molecules, hydrodynamic eqns. 0=3456
radiative effects at high temp. 0=19049
Rayleigh problem, 2nd-order effects 2=21873
Rayleigh—Taylor instabilities, analogy in A linear pinched discharge 0=15012
Rayleigh—Taylor instability, effect of magnetic field 4=8910
Rayleigh—Taylor instability, rotating conducting fluid in mag. field 4=8911
Rayleigh—Taylor instability, rotating fluid 4=8134
Rayleigh—Taylor instability, variational principle 4=29587
relativistic 4=27136
relativistic, Clebsch transformations 4=21030
relativistic, derivation from transport equation 3=18758
relativistic, with discontinuity of rest mass, eqns. of motion 1=15788
relativistic fluid spheres, Schwarzschild interior solution, generalization 0=2112
relativistic, Fokker action principle generalized, droplet ensemble 0=6662

atom, Stark effect 1=7427
atoms, Stark effect, calc. 2=6089, 20740
atom, Stark effect, quantum theory 2=16470
atoms, stopping power for proton, neutral H and H^- beams 0=9755
atomic, storage technique 2=10225
atoms, structure, Schrödinger eqn. solution 2=10195
atomic, structure of shock front 3=21491
atoms, 10 MeV, excitation and Lorentz ionization 4=25527
atomic, thermal conductivity, for negligible
atoms, in thermosphere, vertical distrib. 3=5209
atomic, transport properties comparison 2=2770
atom trapping by mag. field, plasma prod. 2=15912
atoms, two, asympt. exchange coupling 4=19990
atoms, in ^2P state, chem. reaction with N_2 4=13724
atom, two-photon ionization, e.g. metastable 25 state 4=22318
atom, in 2S state, by charge-exchange by proton beam 4=11528
atoms, 2s state, excitation by electron collision, cross-section 0=2717
atom, 2s and 2p excitation by electron impact 4=9659
atom, 2s and 2p excitation by electron impact 4=25523
atom, 2s and 2p level excitation by slow-electrons 3=15298
atom, 2s—3s excitation, by electron impact 4=25526
atomic, viscosity, elastic scatt. 2=9292
atomic, viscosity and thermal conductivity up to 10^5 °K 2=11426
atom, wavefunctions, convergence 4=3775
atom, wave-functions, Gaussian expansion 3=25042
atmospheric, vert. distrib. during quiet sun, calc. 4=7872
aurora, emission spectra, systematic behaviour 2=4675
auroral spectra, effects 2=2513
Balmer emission lines, in solar prominences, intensities and profiles 3=5260
Balmer line profiles in capillary arc discharge 2=17805
Balmer lines, intensities, excited atoms conc. in discharge 0=1477
Balmer lines in plasma, pressure broadening 4=28110
Balmer series formula confirmed, data errors 2=10204
in Be, proton-bombarded, diffusion and agglomeration 4=15484
beams, neutral, energetic, inverted cascades 3=12076
in benzene solns., thermodynamic props. 2=13327
in betatron, electron loss by scatt. 3=459
binary mixtures with inert gases, thermal conductivity 1=8166
binding energy, 2nd-order perturbation theory 0=7302
bond, from n.m.r., t-butanol organic solutions, p shift 4=1251

Hydrogen—contd
bonds, C^{13}—H, effect of substitution, methanes 3=20001
bonds, halide anions as proton acceptors 3=17566
bonds, in organic mols., vibration, by i.r. spectroscopy, proposed study 3=6378
bound, π^- interaction, charge transfer 2=22588
bounded atom, energy levels 1=18278
breakdown by azimuthal elec. fields 2=22195
breakdown, 10^{-6} mm press., using secondary electrons 3=4090
buffer gas, alkali atoms hyperfine transitions of ground state, dependence 0=17701
capture of Ξ - hyperons at rest, theory 4=9301
catalysis and adsorption on Ge films 3=3397
charge exchange and dissociation by H^+, H_2^+ and H_3^+ ions 4=11529
charge exchange, two-electron, with protons 4=464
charge, residual, of molecules, search for 1=2307
charge transfer, between H and N^+ and O^+ 0=20579
charge transfer collisions, with Li^+ ions, 10-475 keV 0=19625
chemical displacement reaction with isobutane, steric effect 4=26753
chemical reactions in upper atmosphere, and OH, HO_2, H_2, NO_2, O_3, review 4=13718
chemisorbed on Ni, effect on magnetization 1=11432
chemisorption on Co 3=5163
chemisorption on NiO after neutron irrad. 3=3366
chemisorption on W and Ni, effect on sintering 2=10946
chemisorption, on ZnO, temp. dependence 0=750
in chromosphere, 3.03 cm emission 0=18629
H cloud of interplanetary gas of terrestrial origin 1=15415
combustion with F_2, flat-flame burner 1=12676
compressibility isotherms 0=6838
compressibility, quantum hard-sphere model 3=21434
convective layer of sun, circulation 1=18076
cooling of Pt filaments 4=10034
corona, high-current 0=14990
corona pressure and positive Joshi effect 3=19207
cosmic, heat conduction 0=18609
in cosmic primary radiation 2=20476
crystal structure, atomic, isotopes, constant doubling 3=18306
crystal structure, by neutron diffraction 3=1319
crystalline, structural data; anomalous sp. ht. and n.m.r. 0=11586
density of mixtures with D_2, from m.pt. to 20.4°K 1=18438
desorption, from Pd 0=10373
detection in gas mixtures 0=21299
detection in U by mass spectrometry 2=4582
determination, using deuterium exchange 0=18453
detonation, density in induction zone 4=2776
detonation of H_2—O_2 mixtures 1=11623
detonation, marginal, of mixtures with O_2, effects of additives 2=19147
detonation, with O_2 + 2CO 1=7908
deuterated, liquid, surface tension, 16.7–20.5°K 4=2644
deuterium pinches, study neutron production 1=749
diamagnetism, H_2, H, continuum contribution importance 4=22354
diamagnetism, H_2, HD, D_2, calc., including vibrs. 4=9705
diatomic bond destruction by pressure, calc., conditions for monatomic phase 0=15767
diffusion, adsorption by Pd 2=23207
diffusion, in air, CO_2, He 0=8697
diffusion, into Ar, Kr, through porous materials, separation 3=9491
diffusion of atomic H, in Ar–H_2 mixtures 0=5050
diffusion, in binary mixtures with N_2, CO, Ar, CO_2, SF_6, 290-470°K 4=27216
diffusion in CO_2, CF_2Cl_2, Kr, Xe, meas. by T tracer 4=11240
diffusion, through dry granular materials 0=14693
diffusion in Fe 2=23204
diffusion in Fe and ferritic steels, Fick's law modification 4=6873
diffusion of H through H_2 at 300-700°K 1=10541
diffusion, in H_2—N_2O, 300-480°K 1=15946
diffusion of He^4 with HT, thermal 3=21430
diffusion in inert gases 2=1194
diffusion, in iron and mild steel 0=11641
diffusion in mild steel cylinders at 65°C 1=990

Hydrogen—contd
diffusion, in Mo, W, Nb, above 1000°C, degassing 4=22620
diffusion, in N_2 1=12919
diffusion in Ni, mag. saturation obs. 4=22623
diffusion in Ni, meas. from elec. cond. 2=21067
diffusion in Ni, 970-1320°C 4=22622
diffusion in Ni, W, Mo, Fe 2=21074
diffusion in Nilo-K glass to metal seal material 4=6876
diffusion in O_2, rel. to intermolecular potentials 2=2764
diffusion through Pd 1=4990
diffusion in Pd, effect of concn. discontinuity, theory 1=17555
diffusion in Pd—H at room temp. 4=17444
diffusion, through Pd membranes 0=14061
diffusion and permeability for fused quartz 2=6366
diffusion in polymers, and D, T 4=6877
diffusion in quartz. 3=8452
diffusion rate in gold 2=14459
diffusion, solubility and permeability in Vycor glass 0=5051
diffusion in steel after proton irrad. 2=21069
diffusion in γ–TiH_2 2=2097
diffusion in β-zirconium, coeffs. 4=1522
diffusion in Zr alloys, heat of transport 4=6880
diffusion, in α-Zircaloy-2 0=18406
diffusion in Zircaloy-2, thermal, theory 4=6882
diffusion in ZrH 2=6367
discharge, electric, glow, plasma, efficiency meas. 4=8644
discharge, enhanced diffusion, r.f. with mag. fld. 3=1944
in discharge in mag. field, reaction ht. cond. 4=29882
discharge plasma, motion of striations 3=19196
discharge, r.f., in single-turn coil, 70 W, 125 Mc/s 4=18713
discharge, wave of stratification striations 2=7573
discharges, electron energy distrib. in plasma 1=16315
discharges, electron mobility 1=16271
discharges, 300 kc/s, shock waves and skin effect 1=4589
dissociation, in elec. discharges 0=3756
dissociation energy, u.v. absorption edge 1=6052
dissociation of H_2^+, HD^+, HT^+, HD, by elec. and mag. fields, calc. 1=8862
dissociating, high-temp. transport props., theory 2=5066
dissociation by neutron bombardment 4=3918
dissociation rate 2=14333
dissociation rates, shock tube det. 2=1183
dissociation, shock tube meas. 2=12346
dissociation behind shock waves 4=18348
dissociation, at W filament 0=9779
distribution in telluric hydrogen corona 1=5131
e.p.r. linewidths in atomic gas 1=3510
e.s.r., atomic, in $CaSO_4 \cdot \frac{1}{2}H_2O$, γ irrad. 4=26401
effect on ageing of steel 1=6539
effect on Al_2O_3 fracture strength 4=28935
effect on elec. resistance of Fe wires 3=10721
effect in epitaxial growth of SiO_2 on Si surface 4=15823
effect on mechanical props. of Ni 3=11153
effect on mechanical props. of Ni and Cu 4=13430
effect on photoelec. emission of Ni oxide films 0=19720
effect on work function of Al, Ag, Cu, Au 4=14741
eigenfunctions, parabolic and spherical, relations between 0=13390
elec. breakdown, cathode material dependence 0=254
elec. breakdown, below critical pressure 0=9020
elec. breakdown, current increase 0=9021
elec. breakdown, effect of cathode surface 0=10871
elec. breakdown lag at pd = 400 mm Hg cm 0=2356
elec. breakdown at low press., expt. and theory 1=7042
elec. breakdown between plane Pt electrodes, 2nd Townsend coeff 3=7492
elec. breakdown, transient, at low E/p 1=18811
elec. breakdown, u.h.f., time-lags 3=7491
electric discharge, condensed in high vac., appls. 4=27497
elec. discharges, h.f., in const. mag. field 0=19649
elec. discharges, h.f., in microwave cavities, at l.p. 0=2354
elec. discharges, h.f. plasma loops 0=14986
elec. discharges in, high rate of energy exchange between electrons, evidence 3=24268
elec. discharges, l.p., anode spots (plasmas) 0=16984
elec. discharges, l.p., plasma dynamics 0=16978
elec. discharges, Lorentz plasma, electron distrib. 0=2364-5

Hydrogen—contd

elec. discharges, in mag. fields 0=1112
elec. discharges, negative current—voltage curves at 400 mm Hg 0=10886
elec. discharges, pulsed, spectral study 0=5318, 10914
elec. discharge, r.f., ion cycltron waves 3=7622
electric discharge, stationary striations 4=5568
elec. discharges, 3-30 Mc/s, in static mag. field 0=12594
electric discharge in, at 3.2 Mc/s, localization by quadrupole mag. field 4=24646
elec. discharge, toroidal, atom population estimation 3=7579
elec. discharge, Townsend system, transient current growth 1=2948
electric discharges, v.h.f., electron-energy distrib. 1=4587
electric sparks in, channel expansion 1=18790
electrodeless discharges, electron mobility meas. 0=7094
electrodeless discharges, H_2 and H_2—He, ion pressure variations and reaction rate consts. 0=14969
electrodeless discharges, self-absorption 0=4172
electrodeless ring discharges, growth investigation 2=9538
electron avalanches, in uniform elec. fields, electron component 1=272
electron beam energy losses, passing through H_2 0=2400, 19764
electron capture by protons in atomic H, distorted wave method 0=5869
electron capture by protons, elec. 3=16908
electron capture by protons in H_2, molecular effects 0=5996
electron collision cross-sections in d.c. field 3=23942
electron diffusion—mobility coeffs. ratio 3=4023
electron diffusion, slow, meas. 2=13381
electron distrib. and d.c. and microwave breakdown 3=12072
electron drift and diffusion in, with crossed elec. and mag. fields 2=17779
electron drift mobility, in atomic H 0=5861
electron drift speed—diffusion coeff. ratio meas. 4=11254
electron drift velocity 3=9729
electron drift velocities from mol. excitation 4=11252
electron drift velocity, 77°-373°K 1=2300
electron elastic scattering on, low energies 0=15675
electron impact spectra 4=6520
electron inelastic scattering 4=12394
electron prod. by 50-100 keV protons 3=14641
electron scatt., elastic and inelastic, from electron transport 4=11509
H, electron scattering, elastic, polarized orbital method 4=28149
electron scatt., up to 9 eV, calc. 3=17540
electron scattering, zero-energy, Schwinger variational method 1=8823
electron stopping power 0=352
H, electronic energy levels, perturbation caused by proton structure 4=25479
equations of state, and H_2—He mixtures, $<$ H_2 b.p. 0=16734
equation of state, isotopes, universal, including quantum effects 3=21321
equation of state, P—V—T, 100-10^7°K, 10^{-10}—10^3g cm^{-3}, dissoc., and ionization 4=14206
equation of state, partially ionized 1=18834
equations of state, —253°-4000°C, 1-50 kg cm^{-2} 2=17507
escape from iron 0=20723
excitation and ionization, number of observed lines in a series 1=19596
excitation and ionization in solar flares and prominences 2=15355
excitation of 2s, 2p levels, by electron collision, 10-50 eV 3=17541
excited state, electron polarizability 1=13922
excited states, united atom model 1=835
first ionization coeff. 0=5271
flames, H+O_3 2=3789
flames with O_3, vibrational excitation of OH 2=16513
flash discharge, 1250-1340A, radiative intensity 2=11629
flow in Laval nozzle, enrichment of CO_2 1=15929
flow through porous media 1=10530
flow, two-phase, idealized solutions 4=11152
formation, in H_2O photolysis, with O_2 0=3319
free radicals, in solid films, prod. by p and d bombardment, 100-1000 V, e.p.r. 3=10550

Hydrogen—contd

freezing, para, pressure-density-temp, relations, up to 350 atm. 3=14418
galactic distribution, near centre 0=8509
Galactic distrib., deviation from galactic plane, from 21 cm obs. 3=23712
galactic distribution, in solar neighbourhood 0=18828
at Galactic pole, 21 cm radio obs. 4=23945
in galaxies, atomic, radio emission 4=30990-1
galaxies, Virgo cluster, radio obs. 4=13972
in galaxy, distrib. 2=21743
in galaxy, 21 cm survey, intensity distrib. and radial velocity 4=20948
γ-ray absorption, 13-80 MeV 0=7328
γ-ray backscattering, 0.2-2.0 MeV 0=7318
gas, absorption and adsorption in Pd 2=10932
gas analyser for ortho—para H_2 and D_2 2=4578
gas, compressed, Raman spectrum vibr. perturbations 4=22353
gas discharge tubes, pulsed super-high frequency discharge 4=24607
gas, dissociation and neutralization of H_2^+ ions 0=19610
gas, elec. breakdown at 8 Mc/s 1=18809
gas, electron back diffusion in 3=5693
gas, energy transfer from fast H_2^+ and H_3^+ beams, meas. 4=11514
gas, evolution from Ni at 800-900°C 0=12120
gas flow, free-molecular, momentum transfer to metal surfaces 3=5456
gas, ion and electron drift velocities 2=22172
gas, ionization by H atoms and protons, 10-180 keV 3=5620
gas, ionization, by 100 keV protons 3=19177
gas, ionizing, thermodynamic properties 4=21456
gas isotopes, diffusion, thermal approximations 2=13364
gas kinetics, para-ortho mixtures, low temperature 4=8236
gas and liquid, viscosity up to 5000°K 4=231
gas mixtures, with N_2, Ne, He, proton spin—lattice relax. 2=17514
gas, props. at 5000-20 000°K 2=13371
Gaunt factors, free-free transitions at intermediate temps. 1=19582
glow and arc discharges, excitation temps. 0=2348
glow discharge, cross-section of luminous discharge channel 1=13073
glow discharge, d.c., oscillations 1=4578
glow discharge, energy distrib. to electrodes 2=17800
glow discharge, H_5^+ detection 2=22190
glow discharges, l.f. phenomena 0=7089
glow discharges, penetration into gaps, expt. 2=9550
glow discharge, positive column instability 2=7582
glow discharge, wall temp., longit. variation 2=22191
glows, space charge density 1=18802
ground-state dispersion formula, integral representation 1=4898
h.f. electrical discharges, effect on coupled circuit 1=5425
h.f. ion source 1=18939
He ions in, electron capture and loss, 200-1500 keV 2=162, 22169
He^{2+}—H charge transfer, quantum theory 2=6107
in hair-line crack formation in steel 3=3241
high-pr. gas target 1=16626
hot atom reactions, with propane, butane, butene -1, kinetic theory analysis 4=30395
hybridization calc. 0=1509
hydrogen—deuterium exchange in fused silica, i.r. study 1=1475
hydrogen emission in night glow 1=6630
hydrogen—iodine reaction rates 2=10966
hydrogenic continuum electrostatic integrals 4=25477
i.r. absorption spectra in solutions 2=9280
H and inert gases, van der Waals forces between atoms 1=17289
infrared band profile in pressure-induced absorption 4=20044
interaction energies for H—H_2 and H_2—H_2 0=15785
H, interaction with He, methane and H_2 4=25583
interaction with Mo ribbon 1=11600
interaction with W surface 0=6424
interactions of 1.61 BeV/c antiprotons 3=19633
intergalactic, radio-wave absorption, 1265-1500 Mc/s 2=15297
intergalactic, spectral detection method 1=15413

Hydrogen—contd
interstellar cloud, "average", physical characteristics, 21 cm study 4=29482
interstellar clouds, heating and cooling 1=6693-5
interstellar, H_2, i.r., expected radiation 3=11504
interstellar, methods of observation and study 0=18610
interstellar, neutral, radio emission 2=24174
interstellar streaming, near sun 1=10372
interstitial atoms in CaF_2, e.s.r. 4=26402
ion beam, molecular, dissociation, energy spreads 4=12542
ion beams, negative 0=17047
ion beams, space-charge neutralization 2=224
ion beam from 2 MeV accel., H^+–H_2^+–H_3^+ content 2=11731
ion beam, use in gyromagnetic ratio meas. 3=24837
ion collisions, in H + D 0=10881
ion currents, 30 mA, from duoplasmatron 2=20041
ion h.f. source, beam width 2=20042
in ion—molecule reactions, H atoms and ions transfer 3=23540
ion mobility in 0=19620
ion—molecule reactions with Ne under electron bombard. 4=4694
H-ion plasma, recombination 2=11620
ion source, annular, in crossed fields 4=19115
ion source for Ogra mirror machine 4=19059
ionization and capture of electrons, by H_1^+, H_2^+, H_3^+ ion beams in H 4=21461
ionization and charge exchange, for H^0, H^+, H_2^+, H_3^+ 0=2329
ionization coeff., pressure dependence 2=7558
ionization, of D atoms in H_2 gas 0=14966
ionization and dissociation, by electron impact, Frank—Condon model 1=4554
ionization, electron, first Townsend coefft. meas. 4=5555
ionization, by electron impact 1=16260
ionization by electron impact, ionization cross-section and coeff. 4=27483
ionization, by electrons and protons, Born approx. 2=9529
ionization, first and second coeffs, meas. 4=18681
ionization freq., by electrons, freq. meas. 3=12071
ionization from ground state by electrons 3=7433
ionization of H and H^- by electron impact, exchange corrections 1=16262
ionization by H^+ and He^+ beams, by H^+ and He^+, electron capture into excited state 4=11527
ionization, H_2, electron impact, up to 500 eV, current saturation 4=16432
ionization, by H_2^+ 10-60 keV beam 1=7030
ionization, H_3^+ as ion usually observed, not H_2^+ 1=2944
ionization, He atoms and ions, 15-180 keV 4=2944
ionization, by Li positive ions 1=4565
ionization, by mag. field, collisional breakup 3=19176
H ionization, by p, 60-400 keV, crossed beam meas. 4=5558
ionization, by protons, 100-450 keV 3=21698
ionization by protons at 0.15-1.10 MeV, cross-sections 1=4555
ionization in pulsed discharge 2=1388
ionization in pulsed discharge, dissociation effects 4=18682
ionization, specific, by positrons and electrons 3=2248
ionization study, high press., low temp., equilib. eqn. 4=11531
ionization, by 10-50 keV H^- and O^- ions 0=12579
H, ionization near threshold 4=27485
ionization, Townsend's 1st coeff., calc. 0=14962
ionized, radiowave continuous absorption coeff. 0=20592
ionized, thermal cond. in mag. field, collisional effects 4=459
ionized, thermal cond. tensors in external mag. field 4=458
ions on Ag, Al, Cu, W, rel. to u.v. radiation 4=20487
ions, atomic prodn of r.f. source 3=4008
ions, atoms, mols, in M-type stars 3=11574
H ions or atoms passing through gases, various processes 1=16255
ions, bombardment of Mo, Zr, graphite, secondary emission 2=220, 22273
ions, cyclotron resonance, use in mag. field meas. 4=16609
ions, dissociation by strong elec. fields 3=7436
ions, electron capture cross-section, first Born and distorted wave approx. 4=18690
ions, electron capture from O 0=8997
ions, electron–ion three-body recombination 2=13543

Hydrogen—contd
ions, fast proton resonant charge transfer 4=24575
ions, up to 50 keV energy, sputtering of Cu 0=9109
ions, H^-, absorption spectrum coefficients 0=9765
H^- beam, polarized, production 4=24751
H^- beam production 4=29987
H^- ion beams, from duo-plasmatron, 70 μA at 20 keV 3=9870
H^-, binding energy from photodetachment cross-section 4=9629
ions, H^- bound—free absorption coeff. 4=25482
H^-, collisions in O_2, CCl_4 and SF_6, neg. ion formation 1=16269
ion, H^-, continuous absorption coeff., analytical formula 1=17270
H^- ion, continuous absorpt. coefficient calc. 2=14217
H^- ion, continuous absorption due to free—free transitions, calc. 1=2277
H^-, continuous absorpt. in stellar atm., rel. to spectral line strength 4=23867
H^-, detachment by $H^- + e \rightarrow H + e + e^{*}$, cross-sections 4=15302
ions, H^-, in elec. field, mean life against dissociatiation 3=12083
ions, H^-, electron detachment by electrons 0=7077
ions, H^-, e detachment, by e, cross-section, calc. 3=14521
ions, H^-, electron loss in atomic H 0=5278
ions, H^-, electrostatic polarizability, calc. 1=12242
H^- formation, by H_1^+, H_2^+, H_3^+ ion beams, in H_2O or Hg vapour streams, 5-30 keV 4=450
ions, H^-, free–free absorption coeff. 0=7076
H^-, free-free absorption coeff. 4=25563
H^-, free-free transitions, in exchange approx. 4=28147
H^- ground state wave function 2=3759
ion, H_1^-, H_1^+, H_1^0, prod. by p-beams in H_2, He, Ne, A, CO_2, C_2H_8 2=1386
H^-, h.v. source, using proton overcharging 1=4654
ions, H^-, ionization potential calc. 2=12284
H^-, ionization of various gases 1=4558
H^- ions, low-energy collision cross-sections in O_2 3=4012
H^- ion, n.m.r. shielding constant 2=1970
H^-, oscillator strengths, sum rules 2=20741
ions, H^-, photodetachment cross-section 0=14960
ions, H^-, photodetachment cross-section, spectral depend. 0=2714
H^- photodetachment, empirical analysis 3=19180
H^-, photodetachment spectrum 3=4003
H^-e^+, positron annihilation from ground state, calc. 2=18406
H^- ion, positron binding and annihilation 2=10227
ions, H^- prod. by H^+ and H_2^+ bombard. of W 0=8986
ions, H^-, in solar atmos., collisional dissociation 0=18747
H^- ion source, using supersonic Hg jet 2=3090
ions, H^+, bombardment of Cu, sputtering ratios 0=9110
ions, H^+, capture of 1 or 2 electrons in inert gases 0=16977
ions, H^+, charge-transfer cross-section 0=12589
H^+, cyclotron and parametric resonance in plasma 1=6096
ions, H^+ formation, on incandescent W 0=8985
ions, H^+ formation in ion sources 0=12582
H^+, growth in water vapour 4=457
H^+—H(1s) collisions, resonant charge transfer, continuum distorted wave approx. 4=22324
ions, $H^+ + H(1s)$ electron capture, exact resonance, asympt. form of impulse approx. 4=27487
H^+—H, electron capture wave calc. 4=22326
$H^+ + H(1s) \rightarrow H(1s) + H^+$, cross-section 3=9726
$H^+ + H(1s) \rightarrow H(1s) + H^+$, cross-section calc. 3=1938
ions, $H^+ + H\ (1s) \rightarrow H\ (1s) + H^+$, exact resonance, asymptotic form of impulse approx. 4=18691
ion, $H^+ + H(1s) \rightarrow H(2s \text{ or } 2p) + H^+$, theory 3=9732
$H^+ + H(1s) \rightarrow H(n^{l} m) + H^+$, calc., no need for p—p interaction 4=27475
ions, $H^{+,2+}$, in CH_4, CF_4, C_2H_6, C_2F_6, interaction energies 2=12354
ions, H^+ and H_2^+, collisions with atoms, prod. of Lyman-α radiation 3=6366
ions, H^+, H_2^+, D_2^+, emulsion sensitivity, up to 25 keV 4=9037
H^+ and H_2^+ densities in slit source by mass spectrograph and spectroscope 1=16432
H^+, H_2^+ and H_3^+ incident on H_2 3=15390
ions, H^+ and H_2^+, injection into plasma 2=13570

Hydrogen—contd

H^+ and H_2^+ scattering in H_2 1=13064
ions, H^+ to H_4^+, light emission 0=20646
$H^+ + He(1s^2) \rightarrow H(1s) + He^+$, charge exchange cross-section 4=27474
ions, $H^+ + He \rightarrow H + He^+$, 0.025-1 MeV protons 3=14518
ions, H^+, mobility in parent gas 0=8994
ions, H^+, 100 kV bomb. effects in Si 3=10708
H^+, 200 keV beam, light emission on bombard. of Ni 2=3970
ions, $H^\pm$, bomb. of metals, secondary emission 0=9078
ions, H_2^-, activation energy, theory 2=157
H_2^- beam prodn. 3=7650
H_2^- ion, characteristic frequencies, conditions of meas. 4=9688
H_2^-, collision freq. with mols., var. with pressure 4=8626
ions, H_2^- continuous absorpt. coefft., free—free calc. 4=10834
ions, H_2^-, energy absorption and emission, model 2=5306
ions, H_2^-, observation 0=2319
ions, H_2^-, ${}^2\Sigma_u^+$ state 0=7783
ions, H_2^-, ${}^2\Sigma_u^+$ state, potl. curve 3=25096
H_2^-, three excited states 4=15332
ion, H_2^+, alignment by selective photo-dissociation 2=6229
H_2^+ approx. wavefunction, nonuniform scaling 4=3856
H_2^+, atomic polarization 2=14315
ions H_2^+ beams, charge-exchange and dissociation, in different gases 3=7445
H_2^+, binding energy, from 3-body theory 1=4924
ions, H_2^+, Born—Oppenheimer separation calc. 0=11536
H_2^+, charge shift and charge deformation of H atom 2=20776
H_2^+ constant ion current source 2=3089
ions, H_2^+, cyclotron freq., mag. moment of proton 1=10886
H_2^+, dissociation and charge exchange in H_2 atmos. 1=4564
H_2^+, dissociation, in collision with H_2, N_2, He, A and Kr 1=16266
H_2^+ dissociation cross-section in H_2 gas 4=25749
H_2^+, dissociation, effect of vibrational excitation 4=20115
ion, H_2^+, dissociation energies meas. 4=9778
ions, H_2^+, dissociation in gases at 10-180 keV 4=20118
H_2^+ ions, dissociation by mag. fields 1=16267
ions, H_2^+, dissociation by variable strong elec. fields 1=2947
H_2^+ ions, dissociation, vibr. effects 2=2026
H_2^+, eigenfunctions, variation approx. 3=7126
H_2^+, electron scattering, theory 4=9708
H_2^+, electronic structure, calc. 2=3751
H_2^+, exact function, rel. to variational functions 4=25641
H_2^+, exact wave-function, on one-centre hydrogenic basis, resolution 3=25094
H_2^+, force constants 3=10499
H_2^+ and H^+ charge exchange in H_2 2=11622
$H_2^{+*} + H_2 \rightarrow H_3^+ + H$, cross-sect. rel. to vibration of H_2^+ ion 4=24574
$H_2^+ + He \rightarrow HeH^+ + H$, meas. 2=15881
ions, H_2^+, inelastic electron scatt., first Born approx. 4=17279
ions, H_2^+, interaction with N ions and neutral N_2 2=13532
H_2^+, interstellar, monochromatic radio-emission 2=1019
H_2^+, isotopic forms, dissociation by Lorentz force 3=14516
H_2^+, Lorentz dissociation, proton trapping in DCX-1 4=5687
H_2^+, many-centre wavefunctions 4=22356
H_2^+ ions, on metal surfaces, free proton prod., dissociation fractions, expt. 4=28270
H_2^+, molecular wave-functions 1=14066
H_2^+, molecule, lower bounds for σg and σu states 4=25643
H_2^+ ion, nonintegral Slater-orbital calc. 2=14314
H_2^+, occurrence in interstellar space 2=6984
H_2^+, one, two and three-centre wave functions 3=22541
H_2^+ photodissociation cross-sect. 4=25751
ions, H_2^+, r.f. spectra, salc. 0=17742
ions, H_2^+, range in quartz, 7.5-52 keV 1=336
ions, H_2^+, recomb., in inert gases 2=9531
ions, H_2^+, S-states, energy calc. 0=17762
ions, H_2^+, 750 keV, energy transfer to give neutral beam of quantum levels > 7 4=11515
H_2^+ ion source, h.f. 3=12252
H_2^+ source for "Ogra" 3=7646
ions, H_2^+ splitting reactions cross-sections 3=2585
ions, H_2^+, sputtering of Cu 0=10990
H_2^+, structure, perturbation theory calc. 2=2008
ions, H_2^+, united atom model, for ground state 0=5962

Hydrogen—contd

H_2^+, united atom treatment 2nd order perturbation energy 4=30434
ions, H_2^+, vibrational levels 0=17732
H_2^+, vibrational levels 1=19620
H_2^+, vibr. levels, relative populations 2=10106
ions, H_2^+, vibrational states of ground electronic state 0=13434
H_2^+, virial theorem, basis function, different number choice 4=11232
H_2^+, wave-functions 4=28169
HD^+, collision-induced dissociation 1=7495
HD^+—He, HD^+—Ne, Ar^+—HD, and Kr^+—HD reactions, isotope effects, intramolecular 4=29205
H_3^-, electronic wave-functions 4=25675
H_3^+, configuration-interaction calc. of ground state 4=28216
H_3^+, electron pairing 4=30444
H_3^+, electronic wave-functions 4=25675
ions, H_3^+ formation cross sect. as function of E/p 4=24576
H_3^+, formation and stability 3=4004
ions, H_3^+ and H_2D^+, formation in omegatron 2=22177
H_3^+ and H_3, two-centre wavefunctions 4=28173
H_3^+ mobility in hydrogen 1=10673
H_3^+, molecular struct. and energy calc. 4=13481
H_3^+ molecule—ion, pot. energy surfaces 4=12482
H_3^+, occurrence in field ionization of H 3=4019
H_3^+, proton-transfer reactions with saturated hydrocarbons 4=23622
H_4^+, H_5^+ molecules, detection in mass-spectrometer 4=9740
ions, H_5^+, detection in glow discharge 2=22190
ions, molecular h.f.s. 0=20647
ions, negative, accn. and extraction in Colorado cyclotron 3=5736
ions, negative, elec. dissociation in cyclotrons, synchrocyclotrons 3=5737
ions, negative, electron—electron and electron—nuclear energies 4=1178
ions, negative, source 0=12640
ions, recomb. in discharges at 1.1 mm Hg 0=10882
ions, single, exosphere, distrib., 1500, 2000°K 3=16240
ions, sputtering-yield for metals 4=12826
ions (Z=2 to 13), range in H 2=7674
isomerism, ortho—para conversion in solid, var. volumes 4=23621
isotope effect, in oxidation of benzaldehyde-α-t 0=1953
isotope effect in reaction $CF_3 + CHD_3$ 2=23955
isotope exchange, H_2–D_2, on Ni surface 2=6871
isotope layers, 1.3-4.2°K, structure, isotopic effects 4=17842
isotope separation by azeotrope distillation 3=715
isotope separation, by low-temp. distillation 0=19576
isotopes, electrolytic separation factors, temp. depend. 2=19149
isotopes, H_2, HD and D_2, viscosity and intermolecular force potentials 4=18243
isotopes, low temp. props. 0=6837
isotopes, with noble gases, viscosity meas., 20-300°K 0=8675
isotopes, virial coefficient with He 1=6898
isotopic analysis by mass spectrometry 3=13634
isotopic anal., spectral methods 1=3526
isotopic fractionation between H_2O and aqueous H ion 4=23625
jets, turbulent mixing with air 0=8682
Joshi effect 0=7095
in K halide crystals, optical props. and thermal stability 0=8009
Lamb shift, effect of proton finite mass 2=16469
Lamb shift of $3^2S_{1/2}$ state, meas. 1=19583
ΛH^4, decay in flight 2=10001
lamp, spectral intensity 2=11485
Lennard—Jones 6-12 potential parameters 1=11137
Li^8 ion range, 40-450 keV 1=7107
line in galaxy, radiometer 1=47
H, line strengths in elec. field, calc. 4=25480
linear impulse discharge studies 1=13071
liquefaction, in expansion engines and turbines 0=7041
liquefaction, 50 litre/hr output 2=7467, 17708
liquefaction, on small scale 2=7466
liquefier, Clarendon laboratory 4=24467
liquefier cryostat 1=6510

Hydrogen—contd
- liquid, approximate cell model 3=11783
- liquid, in bubble chambers 1=3096
- liquid, in bubble chambers, level and pressure indicator 4=16769
- liquid, cell model, Lennard-Jones—Devonshire, thermodynamic props., six isotopes 3=21318
- liquid, closed-circuit refrigeration system 0=12540
- liquid, cool-down conditions, in contact with various materials 4=11436
- liquid, diffusion on Kr and He 2=1140
- liquid, diffusion of Ne, HT and D_2 1=10510
- liquid, gas-stream method for X-ray diffract. 0=8184
- liquid H or D thin target for nuclear reaction studies 1=474
- liquid-hydrogen targets made from Mylar 3=7396
- liquid, ionization, recombination and mobility 3=16911
- liquid, isotopic, molal volumes and zero-point energies 4=168
- liquid, level gauge 1=16184
- liquid, level meas. and maintenance 2=19790
- liquid, low temp. effective mass concept 4=18175
- liquid, muon absorption 0=15384
- liquid, μ^- capture obs. 2=7877
- liquid, muonic molecular processes 4=6675
- liquid, μ^- reactions, formation and decay of $(d\mu p)^+$ 4=3944
- liquid, n.m. relaxation 0=8671
- liquid, neutron scattering 1=15841
- liquid, nuclear spin relaxation 2=780
- liquid, nuclear spin relaxation and molecular diffusion 1=8137
- liquid, nucleate-boiling heat-transfer, at zero and standard gravity 4=11452
- liquid, O_2, N_2, Ar solubility 20°-33°K, 35 atm. 0=75
- liquid, ortho-para conversion rate 2=16218
- liquid, ortho- and para-, velocity of u.s. waves 1=8117
- liquid, para and normal, u.s. velocity rel. to pressure 3=23880
- liquid, π-meson absorption, lifetimes 3=10162
- liquid, plant, 22 litre/hr parahydrogen 2=17706
- liquid, pressure dependence 2=4982
- liquid, quantum effects 3=21319
- liquid, quantum effects, erratum 4=16105
- liquid, refractive index light, density and temp. var., normal and para. 3=21363
- liquid and solid, i.r. fundamental band 0=4196
- liquid, solubility of He 4=18182
- liquid, solubility of He, rel. to temp. and press. 2=17451
- liquid, solubility meas. of N and O 2=11365
- liquid, in soln. with D_2, density, m.p. to 20.4°K 3=21343
- liquid, specific heat of normal and para 2=1138
- liquid state, thermodynamic props., reduced volume, quantum cell model 4=14134
- liquid, storing and transporting, Dewar containers 2=2945
- liquid, structure theory 2=19534
- liquid, target for electron accelerator 3=14688
- liquid, target, for 1 GeV proton synchrotron at Birmingham 3=14692
- liquid, temp. regulator for bubble chamber 4=16770
- liquid, thermal exchange coeffs., forced convection 3=16605
- liquid, use in vacuum condensation pumps 0=12441
- liquid, viscosity meas. 2=15541
- liquid, viscosity of normal and para mixtures 1=9368
- liquid, wetting of var. structural solids 4=11170
- London—van der Waals forces, non-additivity 0=11506
- low-temp. gas props., calc., para-para and para-ortho collisions 0=7815
- lubricating full journal bearings 0=5046
- in MHD generators, ionization, non-equilib., seeded with Li 4=18663
- maser, atomic, theory 2=11785
- mass spectrum in ultra-high vacuum, omegatron study 3=21460
- melting, pressure—temperature equn. 3=12000
- mesic atoms and molecules, radiative capture of μ^- 4=3824
- meson absorption, π^- and K^-, in liquid, atomic processes, theory 2=18168
- meson capture, μ, calc., V—A theory 3=19665
- metal embrittlement, by adsorption and solid soln. 2=8744
- metallic, ground-state energy, calc. 2=23113

Hydrogen—contd
- metallic, possible nuclear ferromag. state 4=7234
- in metals, chromatographic gas analysis 2=21603
- metals exposed to, paramag. susceptibility meas. 0=15105
- metastable electronic state established 0=20645
- microwave absorption in compressed gas 2=13380
- mixed with H_2O vapour, drift velocities of free electrons 4=8624
- mixture with Ar, electron transport coeffts. and cross-sections calc. 4=11257
- mixture, with methane, solid—vapour equilib., pressure depend. 4=11424
- mixtures with air, detonation wave pressure 0=10351
- mixtures with air, instantaneous composition 0=14692
- mixtures with CH_4, CO_2, N_2, C_2H_4, unlike molecular interactions 0=15786
- mixtures with CH_4, equilibrium of gaseous and solid phases 0=8710
- in mixtures with CH_4, viscosity 1=4364
- mixtures with CO_2, absorption intensity of simultaneous vibrational transitions 0=7749
- mixtures with CO_2, diffusion and thermal diffusion meas. 0=14688
- mixtures with D, mutual solubility at 4.2°K 0=12099
- mixtures with D_2, liquid, props. at 20°K 0=14638
- mixtures with HD, D_2, and HD—D_2, viscosity 0=6820
- mixtures with H_2O vapour, viscosity at 295°K 0=16721
- mixtures with He, N_2:O_2, thermal and ordinary diffusion, u.s. velocity meas. 0=5049
- mixtures with He, nonideal mixing at liq. H temp. 0=7807
- mixtures with N_2 and Ne, thermal diffusion 0=100
- mixtures with N_2, vapour—liquid equilibrium 2=1311
- mixtures with NH_3 and N_2, gas—liquid phase equilib. 0=14639
- mixtures with N_2O, spark discharge behaviour 0=3746
- mixtures with O, gaseous predetonation 0=18436
- mixtures with O, vibration phenomena in detonation waves 0=6862
- mixtures with O_2 and Ar, shock waves 0=8745
- mixtures with O_2, burning—detonation transition 0=12105
- mixtures with O_2, diffusion at high temp. 0=3563
- mixtures with $2O_2$, explosions in tubes, heat loss 0=14110
- mixtures with propane, potential parameters, from viscosity 1=14122
- moderation of neutrons, Monte Carlo calc. 0=12976
- molecules, accurate wave-functions 0=17813
- molecules, adsorbed, n.m.r., spin echo study 2=18485
- molecule, $B^1\Sigma_u^+$ and $^3\Sigma_u^+$ states, MO calc. 4=6565
- molecular beam, condensed, mass-spectrometric study 4=3936
- molecular beam, for plasma density meas. 4=8724
- molecular beams, clustered, prodn. 3=2678
- molecule, binding energy, relativistic corrections 3=4746
- molecule, charge exchange with N^{n+} (n=0-3) 4=8628
- molecules, chemical shift, 20 kg cm^{-2}, room temp., 60 Mc/s 3=10539
- molecules, correlated orbitals for ground state 0=17811
- molecule, dissociation by Ar, statist. study 3=6423
- molecules, dissoc. in discharge tube, increase by Laval nozzle 4=28269
- molecule, dissociative electron capture, calc. 3=4785
- molecule, dissociative ionization, proton analysis 4=6656
- molecule, dissociative ionization at 6-12 keV on H_2 gas 4=20114
- molecule, elec. charge, upper limit 3=10091
- molecule, elec. polarizability tensor calc. 4=1256
- molecular, electron collision freq., presence of mag. field 3=21701
- molecule, electron orbits, calc. rel. to nuclear motions 4=20041
- molecular, electron scattering 4=6521
- molecules, electronic structure calc., with Gaussian wave-functions 0=20655
- molecules, fine structure of ortho and para, calc. 2=3762
- molecular, formation in interstellar matter 0=18865
- molecules, Gaussian wave-functions 0=15751
- molecules, ground state, electron correlation 0=13444
- molecule, ground-state energy, local-energy method 4=12449
- molecule, ground state, potential curve 4=3859

Hydrogen—contd
molecule ground state, expansion of exact wave-functions 3=6392
molecules, ground state, relativistic quantum calc 0=5961
molecules, H_2, D_2 and HD, collision-induced rotational transitions 0=9781
molecules, H_2 and H_2^+, orbital calc. of electronic levels 2=16512
molecule, $H_2^{1,2,3}$, interaction potential with Kr^{85}, from diffusion data 4=24268
molecules, H_2, magnetic props. 2=14238
molecule, h.f.s., of metastable $^3\Pi_u$ state 3=4745
molecules, interaction energy of charged particle, calc. 4=20043
molecule, interaction energy with He atom 3=17622
molecular ion, compressed, boundary perturbation theory 4=9707
molecular ions, cyclotron beam pulsing 2=3116
molecular ions, induction energies, spherical term 3=17568
molecule ion, one-centre wave-function 3=8255
molecule and ion reactions, with He 3=11342
molecular ion, single-centre expansion, ground-state calc. 1=3551
molecule-ion, statistical theory 4=12451
molecular, isotope exchange reactions 0=3311
molecule, isotopically substituted, zero-point energy 3=12794
molecules, London—van der Waals energies calc. 4=3933
molecules, lower excited states, electronic energy calc. 0=7794
molecule, MO correl. factors, convergence 4=20023
molecule, mag. susceptibility, nuclear motion effects 2=10233
molecule, mag. suscept. and rot. mag. moments, vibr. and centrifugal effects 4=28191
molecule, modified rel. to ordinary Schröd. eqns. 4=15333
molecule and mol. ion, wave functions 3=19982
molecular Morse potential parameters, from gas props. 4=29665
molecules, μ-mesic 0=7828
molecule, near-i.r. spectrum, singlet transitions 4=6566
molecule, neutron scatt., quantum states transition 3=25074
molecules, non-adiabatic theory 4=15334
molecules, nuclear spin—spin interaction energy, calc. 1=7493
molecule, one-centre wave functions 3=17577
molecules, orbital calc. of lowest $^3\Sigma_u^+$ and $^1\Sigma_u^+$ states 0=13452
molecular orbitals and mag. screening constants 2=10272
mols., o- and p-, slow neutron scatt., Schrödinger eqn. 3=4734
molecules, perturbation theory 3=15336
molecule, pressure-induced i.r. absorption 3=9512
molecular prod. in state of enhanced vibration 2=22967
molecular quadrupole moment calc., improved 4=20042
molecule, quadrupole spectrum, fundamental band 2=20802
molecular, Raman, Rayleigh scatt. of Lyman α 2=22968
molecules, Raman spectra 0=17746
molecule, recomb., three-body reaction kinetics 4=1319
molecule, rotational excit. by He and H_2 3=17623
molecular screening consts., H_2, HD, D_2, calc., including vibrs. 4=9705
molecules, short-range interaction with atoms 0=4244
molecule, slow neutron scatt. calc. 4=25645
mols., spectrum, quadrupole bands 1-0, 2-0, 4000-5000 cm^{-1} 3=17576
molecules, in stars, detection, by $^3\Sigma$ continuum 3=16407
molecule, valence bond theory 3=6375
molecule, vibrational energy levels, calc. 2=22966
molecule, vibr. excitation by electron impact, meas. 4=28198
molecular vibr. excitation by fast electrons 4=22357
molecular yield in acid solns. 2=2446
monatomic gas, high-temp. thermodynamic props. 3=18855
mutual diffusion of atoms and molecules 2=5053
and N_2 mixture, convection and thermal diffusion 3=149047
nebular emission 0=10520
neutral clouds in galactic spiral arms 1=18009
neutral, distrib. in galactic anticentre 4=23875
neutral, in galactic clusters, radio detection 1=18195
neutral, in Orion region 1=18010

Hydrogen—contd
neutral, sky survey at $\lambda = 21$ cm 3=11505
neutral, in solar neighbourhood 4=29480
neutron backscattering from reflectors, Monte Carlo calc. 4=21860
neutron moderation, effects of atomic motions 2=5669
neutron scatt., by gas mixture including H_2 2=292
neutron scatt. in H-containing media, calc. 2=18116
in Ni, magnetization effects, at low temp. 0=3070
48% Ni—Fe, cubic face-centred, diffusion, and mag. props., -130°C 3=15853
nuclear spin—lattice relax. in gas 3=20023
nuclear spin relaxation 1=9424
nuclear spin—spin resonance 2=11431
in nuclear track emulsions, introduction 1=4750
nucleate-pool-boiling data 2=15816
off-centre calcs. using Coulson—Barnett and Slater-orbital radial factors 4=22291
1S-state, two-photon transitions, h.f.s. levels 2=12283, 14195
orbitals, natural, two-electron chemical bond 4=15335
in organic dyes, effect on photocond. 0=1685
ortho, collisions, and diffusion, 20.35°K 3=8312
ortho-para conversion, catalysts, and para prod. 2=9469, 17706
ortho-para conversions, and isotope exchanges 0=3293
ortho to para conversion, review, catalyst 4=23644
ortho-para conversions, in water, effect on neutron scatt. at 0.005 eV 0=6795
ortho, para, energy exchange between solid bodies and adsorbed gas mols. 2=8898
ortho and para, free energy of liquid mixtures 0=8655
ortho—para mixtures, thermal conductivity at 20°K 2=7254
para-ortho-mixture, transport props. 4=16140
ortho and para modifications, equation of state, difference or 2nd virial coeff. 0=8706
ortho and para, neutron scattering 0=2548
ortho—para separation, by adsorption 0=3329, 16392
ortho and para solid solutions, free energy 2=18541, 23095
o and p, statistical mechanics of solid and liquid mixtures 1=15846
overvoltage in electrolysis 0=8308
oxidation, combustion delay surfaces 4=17858
oxide-coated cathodes in H, work function, sparking potential and 2nd ionization coeffs. 0=5328
oxygen explosions, within gas boundary, simulation 2=4542
parahydrogen, collisions, rotational energy transfer 3=6435
para., conversion to MgO adsorbed equilibrium, below 20°K, endothermic 3=20994
para, densities, saturated liquid and vapour, temp. var., vapour press. and heat of vaporization 3=14424
para, equation of state 4=11228
parahydrogen, fine structure of N=2 vibr. level 2=12309
para-hydrogen, press—density—temp. (15-100°K, up to 350 atm.) relations 3=14146
parahydrogen, saturated liquid, density 2=7191
parahydrogen, second and third virial coeffs. calc. 4=14146
para, solid, lattice specific heat, 2-18°K 0=20749
para, surface tension 4=29605
para, velo. and abosrpt. of acoustic waves, u.s. 25.2°C and relax. times for rot. degrees of freedom 3=14213
pair production and Panofsky ratio 4=11980
partial absorption on W in high vacuum 0=18448
Paschen's law, deviation from, at low temps. 4=479
permeability in Nb 2=10411
permeation, diffusion and solution in Ni 1=6114
permeation, diffusion and solution in Ni 1=11227
permeation in metals, 400° to 900°C 2=12457
permeation in Pd, Ni, purity 3=22819
permeation rate through Fe 3=22815
permeation, through transition metals, theory 0=20848
photoionization and absorption spectra, 600-1000 A meas. 4=12460
photoionization, with prod. of H^+, H_2^+ and H_4^+ 1=1889
photon effects at 323 MeV, electron triplet prod. 2=5627
π^--meson absorption, effect of D_2 contamination 3=17325
pick-up in Magnox ZR 55, effect on grain growth and mech. props. 3=25761
planets, radiation, scattered solar Lyman-α, obs. possibility 3=16343
plasma anomalous resistance 3=12114
plasma, arcing behaviour of metals 2=3020
plasma, attractive two-body interactions 2=5332

Hydrogen—contd
plasma, collision-dominated, spectra 3=7506
plasma, collision-free shock thickness 0=10904
plasma confinement, energy balance 1=11946
plasma, contra-streaming, instability 0=3777
plasma, cool, recomb. and ionization rates 3=21771
plasma, effect of spectral lines on radiant ht. cond. coeff. 4=21330
plasma, elec. cond. decay 2=19934
plasma in electromag. T-tube, Stark profiles 2=3700
plasma, electron collision freq., meas. 2=22228
plasma, electron–ion recombination 2=3029
plasma, electron velocity distrib. 0=5274
plasma, energy emitted in spectral lines at equilibrium 3=19232
plasma, equation of state, exptl. verification by shock tube 4=18795
plasma, equil. composition and eqn. of state 4=8683
plasma, equilib. emissivity calc. for up to 10^4 °K 2=9568
plasma, flow through transverse mag. field, polarization and pondermotive force effects 4=16473
plasma generating devices to high ioniz. 3=1967
plasma generation, high-density, clean, almost fully ionized, by whirl stabilized arcs 4=19060
plasma, H_γ Balmer line Stark broadening 3=4108
plasma, hard X-rays, in strong mag. fld., rel. to E/p 4=11612
plasma, heating by optical generator radiation 4=11645
plasma, high-power toroidal pinch 2=7622
plasma, high temp., relativistic calc. of bremsstrahlung 2=193
plasma, highly ionized, ionic conductivity 0=12586
plasma, incoherent microwave radiation at 3000 Mc/s 0=2370
plasma, ion cyclotron resonance 0=10924
plasma, ionization times of impurities 0=10902
plasma jets, $H_{\beta,\gamma}$ line shape 3=2000
plasma, line profiles and ratios using rapid scan spectrograph 4=27315
plasma, magnetic field (990 kc/s) penetration 3=14585
plasma, negative absorption rel. to generator props. 4=5617
plasma, neutral, in θ-pinch, radial and time-resolved emission 4=18956
plasma, ohmic heating and charged particle loss 0=11475
plasma, optically thick in red, i.r. 3=16924
plasma, optically thin, temp. and density meas. 3=7577
plasma, oscillations, near cyclotron frequency, in long mag. field 0=10925
plasma, oscillations and diffusion 0=12617
plasma, partially ionized, quilibrium props. 0=17007
plasma pinch formation, dynamic stability 1=2975
plasma, pinch, θ, neutral gas effects 3=19271
plasma, pinched, radiative losses from impurity ions 0=1131
plasma, probe contamination 4=2987
plasma produced by impulsive discharge, spectroscopic study 1=290
plasma produced by shock waves, mag. driven spectra 4=24648
plasma prod. by shock waves in SUPPER II 4=27521
plasma properties, 1000-30 000°K, 1-30 atm. 1=10701
plasma, pure, prod., by mag. filtration 3=21822
plasma, radiation temperature resonances, r.f. meas. 3=4121
plasma, radiative thermal cond., mean opacity 2=19932
plasma, recombination radiation 1=7053
plasma, recombination rates 2=19935
plasma, run-away electrons meas. 3=12104
plasma at 16 000° K, recombination through electron–electron collisions, calc. 1=18774
plasma spectrographic analysis 4=18856
plasma, temp. and density 0=19689
plasma, threshold ion energy 2=9601
plasmoids, fast moving 4=11604
polarizability, calc., rel. to elec. and mag. props. 0=508
polycrystalline, structure 0=21187
positive ions, bombard. glass, electron emission 1=1909
positive ions, bombard. glass, electron emission 1=4638
positron annihil. in liq. and solid 3=17254
positron annihil. mean life in liq. and solid 4=4031
positron scattering 3=17542
positron scatt. at low energy by H atoms, calc. 0=4167

Hydrogen—contd
pre-breakdown conduction, in continuously-pumped vacuum systems 0=16748
pressure in cavities of steel 0=18391
pressure dissociation 1=6050
pressure-induced rotational spectrum 0=494
pressure regulator 4=14232
proton beam, fast, discrete energy losses 4=11517
proton beam passage, double-electron capture 4=2949
proton spin–lattice relax., effect of adulteration 2=14332
proton spin—lattice relaxation time 1=15965
pumping by Bayard—Alpert ionization pump 1=15971
pure, glow discharge, effect of cathode region on dynamic props. 0=3752
pure, neutron Fermi age calc. for moderation 4=21874
purification using diffusion leak 1=12405
purification, by diffusion through Pd 0=12069
quasi-H_2 mol. in solar atmosphere 3=5257
quasi-molecules, absorption of light 0=15741
radical bond dissociation energy rel. to ionization potential 4=9777
Raman spectra, high resolution, solid and liquid 2=2721
Raman spectrum, laser stimulated, four photon, difference from D_2 4=9704
Raman spectrum of liquid, laser stimulated 4=8210
reactions, $H + O_2 + M = HO_2 + M$, third-body efficiency 0=21272
reactions, $H_2 + O_2 + N_2$ flames, ionization 0=19616
reaction with O_2, i.r. emission 0=19221
reaction rates with mixtures of $(O + O_3)$ 4=4693
reaction with recoiling T atoms 0=10347
Redhead vacuum gauge sensitivity, pumping rate 2=21954
refractive index and verdet const., theoretical deriv. 1=8164
resonance charge exchange of protons 1=17291
ring-discharge, electrodeless, structure study by microwaves 3=7456
rotational-relax. freq., temp. depend. 3=14212
Saha equation departure, Lyman continuous opacity 0=9763
second virial coeff., H_2, HD, D_2, 20-70°K 2=1195
self-diffusion, n.m.r. meas. 2=7246
shock waves in production of high-speed waves 0=1194
shock waves, successive, propagation 2=9304
H, slow electron exchange scattering 4=22319
in solar chromospheric limb, Balmer series 1=18091
in solar outer layer, formation 0=4888
solar spectrum, α, β and γ lines, centre-to-limb variations 3=16371
solid, anomalous sp. ht. for low o-H conc. 2=6276
solid, crystal structure 2=15017
solid, elec. cond. under high pressure 4=10019
solid, γ-irrad. at 4.2°K, H atom free radicals, e.s.r. 2=3791
solid, i.r. absorption spectrum, h.f.s 2=23575
solid, i.r. spectrum Q branch, theory 4=20459
solid, n.m. relaxation 0=8091
solid, n.m.r., with 67-86% ortho 0=6279
solid, neutron diffrac. study, at 12° K 1=20528
solid, nucl. mag. relaxation 2=21386
solid, nuclear spin relaxation 2=780
solid, ortho—para conversion, effect of dissolved oxygen 1=2355
solid parahydrogen, i.r. and Raman spectra theory 0=4197
solid, phonon branches of i.r. spectrum 2=6576
solid, regular models 2=3809
solid, rotation—vibration i.r. absorption line 1=14605
solid, rotational and vibrational energy bands 0=15700
solid, second-order transitions 3=6450
solid, specific heat, λ anomaly at small molar volumes 4=12644
solid, structure, n.m.r. 0=12038
solubility in alloys of $MgCu_2$ structure 4=30792
solubility in alloys rel. to magnetic susceptibility 1=10130
solubility, in liquid argon 0=19118
solubility in liquid pure Co, Cr, Cu and Ni 4=5157
in solution with D, solid—liquid phase diagrams 3=21612
sorption on Ba films 2=845
sorption on Ba getters 2=5086
sorption on Cu, Au films, surface potential, diode meas. 3=13602
sorption, on Fe films 1=1482
sorption by Ni, effect on ferromag. reson. 1=12551

Hydrogen—contd
sorption on NiO, MgO, neutron irradiated 3=13604
sorption on NiO, 20°-400°C 3=13603
sorption in Th_2Al, equil. pressure isotherms 3=20941
sorption, by Ti and Zr, at low pressures 0=6427
sorptions coeff., Ti droplet getter-ion pump 0=16742
sound absorption, freq./press. depend. 1=8158
sound scattering, balloon transmission measurements 1=9451
sound velocity, at b.p., as temp. meas. 0=216
spark breakdown in low range 1=18813
spark channels, freely recovering, reignition 3=14544
spark discharge, shock-wave generation 4=266
spark, formative time lag meas. 3=9736
sparks, formative time lag meas. 4=8657
spark gaps, high current, cooling 4=27503
specific heat, constant vol., 15-90°K, up to 340 atm. 3=11784
spectra, absorption coeff., ternary, of fund. vibrational band 0=7748
spectra, discharges, variation of intensity with current 0=3623
spectra, emission, excited by protons and H atoms 3=15338
spectra, glow discharges 0=1520
spectra, Hα intensity, nova outburst 0=14451
spectra, Hβ line profile in A behind shock wave 0=15659
spectra, plasma, line asymmetry 3=12753
spectral line pressure shifting, empirical relations 0=5928
spectral lines, asymptotic widening parameters 2=3695
spectrum, high lines, Stark and Doppler broadening 2=6091
spectrum, mol, quadrupole bands, rel. intensities 4=9703
spectrum, quadrupole, collision narrowing obs. 4=3854
spectrum of Rb, doublet displacement, pressure var. 4=6483
spectrum recombination, calc., planetary nebulae 4=12351-3
spin-diffusion at low temps., quantum theory calc. 4=8244
spontaneous fusion of H_2, HD, D_2, probab. 0=1459
Stark shift of hyperfine separation 4=30374
in stars, B, H_2 emission 4=26913
stars, evolution from H 4=20892
in steel, hair-line crack formation 3=3241
stellar content, dense white dwarf stars 0=8517
stellar, molecular, Rayleigh scatt. 3=3587
stopping power for atoms in H beam 2=18427
stopping power for protons, charge-exchange processes 2=18428
striations in glow discharges 0=3753, 5291
superfluidity, in mag. field, critical temp. and press. 0=19531
target for positive ion accel., preparation 2=5408
in Taurus–Orion region, 21 cm spectral study 0=4906
telluric corona 0=8413
in terrestrial accretion 1=11651
thermal cond. of dissociating H_2 2=2762
thermal conductivity, at high temp. 0=10797
thermal conductivity ratio of normal-and para- at 20°K 1=9382
thermal conductivity at 23° by bicalorimeter 1=10550
thermal cond. rel. to viscosity 2=11423
thermal diffusion in CO_2 1=174
thermal diffusion in CO_2, SO_2, C_2H_5Cl 0=959
thermal transpiration at high temps. and 3×10^{-3}–2.5 mm Hg press. 4=5224
thermal transpiration, low pressure 2=1175
thermodynamic props., of HT and D_2, rotational effects, perturbation calc. 0=20606
thermodynamic props., –175° to 150°C 0=14909
thermodynamic props., –175°C to 150°C, up to 2500 atm 3=23930
H, thermodynamic props., up to 100,000° K, partition function cut off effect calc. 4=16146
thermosphere and exosphere, H and H^+ content 2=4682
total specific ionization 1=5423
Townsend discharge, low-press; static and quasistatic characteristics 3=7454
Townsend ionization coeff. in transverse strong mag. field 2=17780
triple and boiling pts. 4=5478
tritium determination using plastic scintillator 1=13220
21 cm line study of galactic radio sources 1=18182
u. h. f. breakdown, time lags 2=3024

Hydrogen—contd
ultrahigh vacua, Mo adsorption technique 1=15974
ultrasonic absorption, rotational relaxation 77° 90° and 293°K 4=16149
u.v. radiation excited by electron swarm 3=10515
united atom model, eigenfunction 0=5963
use as acceleration gas in molecular beam production 4=15389
vapour press. difference for normal and equil., 20°-32°K 4=21356
vapour pressure measurement, 2.5° to 4.2°K, u.h.v. conditions 3=12008
vapour pressure of 20°K equilib. H 2=15805
vapour pressures, 3.4°-4.5°K 0=16738
in various crystalline cpds., lattice position, radii description 0=12054
virial coeffs. between –175°C and +150°C 1=6897
viscosity, -50° to 150°C, below 200 atm. 4=24264
viscosity, meas. 0=16723
viscosity, 20°–80°K 0=92, 8705
working up T conc., thermal diffusion plant 2=8071
zero-point energy 1=3603
H^4, existence, from photon scatt. by Li^7 4=1005
H^4, search for 4=9443
H^5, search for 4=9444
H_α line in night sky spectra, origins 2=9052
H_α line, time-resolved contours 2=1272
H_α narrow emission in aurora 1=6640
Hα radiation in self-sustained Townsend discharge 4=18710
H_β emission flux of nebulae 2=15382
H_β line, Stark profile calc. 2=3696
H, D and HD mixtures, chromatographic separation 1=13977
H/D exchange on clean Ge surface, search 2=10962
H–D separation, electrolytic 2=23964
H—H atom collisions, electronic—vibr. energy transfer 3=6433
H—H atom collisions, spin—change cross-sect. up to 1000°K 4=9677
H–H^+–e decaying plasma, recombination and energy balance 4=18808
H-H^+ system, induction and dispersion energies 2=3714
H + H_2, collinear collisions, exchange, classical mechanical calc. 4=6660
H + H_2 exchange reaction, collision dyanmics 4=17857
H, H_2 and H_3 ions, bombard. metals, secondary electron emission 4=8822
H + H_2 reaction, London pot. energy surface, empirical eqn. 4=20129
H + H_2 reactions, electron transitions 4=17856
H—He isotope quarternary mixtures, diffusion, thermal 4=29672
H/He relative abundances in cosmos 1=15518
H–I reaction, D kinetic isotope effect 4=7745
H—O, H—air mixtures, viscosity variations under mag. field influence 1=158
H–O system, solid–gas equilib. meas. 2=11541
H I survey at high galactic latitudes 1=18012
H I survey near galactic plane 1=18011
H + p, charge transfer, relativistic corrections 4=27486
H–p collisions, 60-450 keV 4=24577
H—positron collisions 1=17283
H II zones, in interstellar matter 0=18608
H II zones, rel. to thermal galactic radio-emission 2=1013
H_2, absorption of γ-rays 2=5599
H_2, adsorption—desorption on W and Mo, 4=23608
H_2 adsorption on graphite 2=4497
H_2 adsorption on previously adsorbed N_2 or Ar layers, 4° K 4=26719
H_2, absorpt. spectra in vac.-u.v., Lyman and Werner bands 4=22355
H_2–Ar gas mixtures, behaviour of low-energy electrons 1=11911
H_2–Ar and H_2–He gas mixtures, Raman effect 2=1204
H_2 arc discharge, visible and i.r. meas. 4=18781
H_2, "atoms in molecules'' calc. 2=6180
H_2, B state, approx. natural spin orbitals 4=6567
H_2, molecular binding energy, nuclear effects 1=14096
H_2–Br_2 reaction rate in nonsteady state, 1000°-1600° K 4=7744
H_2 breakdown, between plane electrodes, rel. to press. 3=4091
H_2 bubble chamber, neutron spectrometer appl. 2=9862

Hydrogen—contd
H_2–CO_2 mixture, thermal diffusion 2=19612
H_2, chemisorption on ZnO 2=8916
H_2 condensation on cooled surf., rel. to vacuum production 4=8259
H_2 condensed layers, texture, rel. to D_2 4=13682
H_2 continuous cryotrapping by Ar, 4.2°K 4=18271
H_2 corona pressure changes, with Joshi effect 4=27504
H_2, correlation diagram, oscillator strengths 3=17574
H_2, cryotrapping effect of Ar, 4.2°K 4=2737
$H_2 + D = HD + H$, molec. beam study 4=3930
H_2—D_2 gas mixtures, thermal diffusion 3=21428
H_2—D_2, H_2—CO_2 and H_2—($H_2 + CO_2$ mixture) diffusion, Kirkendall effect 1=176
H_2–D_2, H_2–HD, HD–D_2 heats of mixing 2=9268
H_2 and D_2, intermolecular potentials, difference 4=9792
H_2—D_2 liquid mixtures, excess thermodynamic properties theory 1=10505
H_2—D_2 liq. solns., surface tension rel. to temp., expt. 4=27164
H_2–D_2, solid, n.m.r., and isotope separation? 4=13488
pH_2—oD_2 solid system, vapour press. at pH_2 triple point, and phase separation 4=20705
H_2–D_2O isotope exchange, effect on $(Pd-H)_{\alpha s}$ electrode 2=4546
H_2, dark shock-excited elec. discharges 1=16278
H_2 molecules, diamagnetic susceptibility, theory 3=8240-1
p-H_2, dielectric polarizability rel. to dielectric const. and density 4=21143
H_2 diffusion in CCl_4 4=18189
H_2 diffusion and solubility in Cu 3=20220
H_2 discharge, Townsend parameters, rel. to cathodic surf. layers 3=4033
H_2, dissociation and ionization in h.f. discharges 2=10285
H_2, dissociation, theory and expt. 4=25744
H_2, dissociation, thermal, on Mo or W catalyst 4=20117
H_2, effect on photocond. of CdS 2=649
H_2, electrodeless discharge 2=1406
$H_2 + e \rightarrow H + H^-$, resonance peaks 4=25748
H_2, electron scatt., 33eV 4=25644
H_2, exchange integrals in electron structure 1=6027
H_2, excitation, from electron swarm energy distrib. 3=6391
H_2, excited states 4=28189
H_2 molecule, far u.v. spectrum 2=14284
H_2 first Townsend coeff. meas. 4=24587
H_2 gas, electron distrib. at high E/P 3=4002
H_2 gas, electron interchange with H atom beam 2=14182
H_2 gas, electron interchange with H atom beam 3=6342
H_2 gas, flow and heat transfer in tube or annular space 1=6973
H_2, gas ionization by H atoms and protons, 10-180 keV 2=13540
H_2, gas, ionization by H^- and O^- ions 1=4558
H_2 gas, ionized, rarefied, charge-carrier diffusion 3=16906
H_2, gas and liquid, nuc. spin relaxation 4=2734
H_2 gas partial atomic and ionic stopping powers for He and H_2 beams 4=25778
H_2 gas, pre-breakdown ionization at low pressures 1=11908
H_2 gas, second virial coeff. estimation 2=11414
o-H_2, gaseous, nuclear magnetic relaxation, theory 4=25740
H_2, Gaussian orbital calculations 1=8849
H_2, ground state constants 3=8254
H_2, ground state, correction energy terms 1=17325-6
H_2, ground state, MO calc. 3=19980
H_2, ground state, potential consts. calc. 2=18453
H_2, ground state, vibr. constants calc. 2=12314
H_2 and H_2^+, electron distrib., Mulliken approx. 2=3769
H_2—HD collisions, cross-section calc. 3=6436
H_2 and HD, mol. vibrational levels 2=8081
H_2, HD, n.m.r. 4=6642
H_2, H_2^+, H_3 systems, adiabatic energy surfaces using "atomic associations" method 4=15320
H_2 and H_3, molecular energies, calc., Hellmann—Feynman theorem 1=823
H_2 and H_2O mixtures, thermal diffusion factor 1=12870
H_2 and H_2—N_2 gaseous mixtures, n.m.r. rel. to pressure 3=21451
H_2, and H_2 + Xe, powerful impulsive discharges, electron energy meas. 3=7452
H_2—He system, liquid—vapour equilibrium 4=11409
H_2, Heitler—London potential calc. 4=11075

Hydrogen—contd
H_2–Hg molecular beam interactions, WKB approx. 2=8131
H_2–hydrocarbon mixtures, virial coeffs. 2=1196
H_2, i.r. 1-0 band quadrupole spectrum 3=248
H_2, induced fundamental band in gaseous, liquid and solid Ar 4=3855
H_2—inert gas mixture, proton spin—lattice relax. 3=21450
H_2 interaction with discharge chamber walls 3=7451
H_2, interaction with H 4=25583
H_2 intermolecular potentials 1=14123
H_2 molecule, interstellar abundance 2=17234
H_2 in interstellar matter, 28 μ radiation, observation possibility 2=4725
H_2, in interstellar space, para- and ortho-, relative amounts 3=3535
H_2–ion, metastable states, MO calc. 2=3752
H_2 ionization coeffs. in crossed elec. and mag. fields 3=4007
H_2 ionization by electron impact 4=24581
H_2 ionization by fast H atoms 3=7427
H_2 ionization by fast He atoms and He^+ ions 4=24566
H_2 ionization growth 1=16265
H_2, ionization by ions of 200-1200 keV energies 4=27488
H_2 ionization by protons, 0.15-1.1 MeV 3=4006
H_2 ions, appearance potential 4=24546
H_2 molec. ions, mesic and electronic, structure 1=14139
H_2 ions, 30-100 keV, ionization of neutral gas 1=18766
H_2, isotopic, adsorption at low temps., theory 4=23595
H_2 –Li^+ interaction, 5 to 25 keV 3=4005
H_2 in liq. Ar, i.r. induced absorpt. in dil. solns. 4=27177
H_2 liq., surface tension rel. to temp., expt. 4=27164
H_2, lowest excited ${}^1\Sigma g^+$ state, MO calc. 4=28188
H_2, MO's based on central potentials, average Hamiltonian and correlation energy 3=17573
H_2, MO calc. of excited states 2=14313
H_2, many-centre wavefunctions 4=22356
H_2–N_2 binary mixtures, thermal cond., expt. and theoretical 2=11425
H_2—N_2 gas mixture, proton spin—lattice relax. 3=21450
$H_2 + N_2$ + organic substance mixtures,
H_2/Na-decane sulphonate/Hg system, contact angles and surface tension 2=4995
H_2—Ne mixtures, elec. discharges, low press., striations 4=16448
H_2, normal and para-, molar volume difference 1=8110
H_2 molecule, nuclear coupling, complete non-relativistic treatment 2=22965
H_2, nuclear spin conservation in ortho—para conversion 1=3565
H_2—O_2 flame, emission, absorpt., and temp. 3=5162
H_2—O_2 mixtures, combustion, effect of shock waves and bubbles 1=4500
H_2—O_2 mixtures, vib. relax., acoustic resonator meas. 4=11244
H_2, one-centre wavefunction calc. 3=17565
H_2, one-electron potential function 3=17575
H_2, orbital calc. of potential curves 2=2010
H_2, ortho—ortho to ortho—para reorientation ratio from n.m.r. 4=9706
H_2, o–p conversion, nuclear spin conservation, erratum 4=17280
H_2, o–p conversion, reaction rates and diffusion 4=25646
H_2, o–p transition 4=25647
H_2, oscillator strengths, determ. by electron impact 4=12450
H_2, para, thermodynamic props., 1-22°K 4=14451
H_2, perturbations of rotational levels 2=8080
H_2, photochlorination isotope effect 3=11356
H_2 photoionization 4=27484
H_2, photoionization and absorpt. cross-sections, 580-1000A 4=28190
H_2 photoionization and spatial correlation of electrons 1=11907
H_2, ${}^1\pi_n$(ls2pII) and ${}^3\pi_n$(ls2pII) states 4=12447
H_2, plasma, ionic sound wave velocity meas. 4=19021
H_2 positive ion production, by energetic He^+ impact 4=24569
H_2, potential energy curves for X ${}^1\Sigma_g^+$ and B ${}^1\Sigma_u^+$ states 1=19621
H_2 molecules, quadrupole fundamental intensity, rotation—vibration interaction correction 4=12448

Hydrogen—contd
- H_2, quadrupole and induced dipole spectrum 2=20803
- H_2, quadrupole lines, breadth and shape 4=8427
- H_2, quasi-molecular, in stellar atmospheres, absorpt. coeff. 4=23868
- H_2, Raman effect and molecular model 2=1204
- H_2, Rayleigh scatt., rel. to star opacity 2=11134
- H_2, reflection and dissociation on tungsten 2=20876
- H_2, refractive index and polarizability determ., variation–perturbation method 4=25642
- H_2, rotational excitation and momentum transfer cross-sections 2=20885
- H_2, rotational–translational relaxation time from thermal conductivity 1=9926
- H_2 rotational transitions in CO/H_2 mixtures 2=3742
- H_2 molecule, SCF wave-function vibrational energy levels 4=6564
- H_2 in solid Ar induced fundamental vibr.—rotation band shift, density, temp. effect 4=30432
- H_2 solid, lattice heat capacity 4=22491
- H_2, solid and liquid, nuclear spin—lattice relaxation 3=23253
- H_2, spatial correl. of two electrons 2=16511
- H_2, spectral intensities rel. to planetary bands 4=25640
- H_2, spectroscopic consts. from Hartree—Fock wave-functions 4=15326
- H_2, spin-diffusion meas., 20°-55°K, rel. to ortho—para concn. 4=8245
- H_2, molecular structure 1=11105
- H_2, thermal conductivity, theory and expt. 4=21182
- H_2, thermal dissociation rate 1=19671
- H_2, thermodynamic and partition functions 4=28177
- H_2, toroidal discharge, Joule heat losses 1=5474
- H_2, toroidal discharge, Joule heat losses 1=11950
- H_2, Townsend discharge, photon absorption 3=4029
- H_2 vapour, Townsend coeffs. and Paschen's law breakdown 3=4010
- H_2, vibrational anal. of Heitler—London potential 3=19981
- H_2 wavefunctions, optimization by scaling 4=20027
- $H_2 + X = H + HX$ and $X_2 + H = X + HX$, ($X = H$, F, Cl, Br and I), diatomics theory 4=26738
- H_2, X-ray scatt., coherent and incoherent 1=19681
- H_3 activated complex, formation from $H_2 + H$, calc. 0=1514
- H_3 complex, "different orbitals for different spins" 4=28215
- H_3, electronic wave-functions 4=25675
- H_3, H_3^+, electronic structure calc. 4=6551
- H_3 system, potential energy surface 4=12480

Hydrogen compounds
- See also Ice; Steam; Water.
- AH_2-type molecules, angular correlation diagrams 4=6556
- acids, in ice, conductivity 4=26107
- acids, inorganic, compressibility of aq. solns., formula 1=1736
- acids, sulphuric, phosphoric and perchloric, at 77°K, γ-ray irrad., atomic H and H_2 yields 0=14137
- deuterides, diatomic, deuteron quadrupole coupling, calc. 2=6225
- deuterides, thermionic ideal gas functions and isotope exchange functions 1=9418
- diatomic, force consts., internuclear distances, calc. 4=9691
- "first-row" hydrides, electronic structure 0=7774-5
- heavy water, critical constants 4=29813
- heavy water, diffusion cooling coeff. 0=17345
- hydride ions, diatomic, Platt electrostatic model 4=12455
- hydrides and deuterides of group V elements, absorpt. spectra 4=6581
- hydrides of Group II metals, dissociation 2=20801
- hydrides, molecular shapes, rel. to atomic valence state energies 3=721
- hydrides, ordering of bond strengths 4=3845
- hydrides, Platt molecular model 2=16510
- hydrides, thermionic ideal gas functions and isotope exchange functions 1=9418
- H-bonded crystals, neutron diffraction analysis 4=23416
- hydrogeneous substs., π-absorpt. 3=12494
- hydrogenous liqs., proton notion meas. by cold neutron scattering 4=27165
- isocyanic acid, flash photolysis, combination reactions of imino radicals 4=22430
- monohydrides, series of, binding type, discontinuous change 4=17281

Hydrogen compounds—contd
- neutron scattering, total cross-sections for protons in hydrogeneous cpds. 4=9754
- oleums, Raman relative integrated intensities 4=18206
- $(pp\mu^-)$ ion, Born–Oppenheimer method 2=16577
- tritiated, scintillation counting 3=17099
- deuterium peroxide, e.s.r. line shape calc. 1=11470
- DBr, absorption spectrum in vacuum u.v. 2=22969
- DCN, vibration bands, line-strengths 0=9797
- DCN, vibration—rotation bands 4=20066
- DCN, vibrational spectrum in org. solvents, freq. shifts and band intensities 0=10669-70
- DCO radical, electronic absorption spectrum 4=6594
- D_2CO, K-type doubling spectra, microwave 1=12285
- DCl, DBr, DI, microwave Stark effect 0=2769
- DCl^{35} infrared bands 1=842
- DCl solution in heavy water, i. r. spectrum 4=24218
- DCl^{35}, spectral lines, foreign gas effects 3=7244
- DCl spectrum, line shift due to HCl, oscill. 4=17283
- DCl, vacuum u.v. spectrum 2=22970
- DCl, vibr.–rot. bands, foreign-gas broadening 3=9511
- DCl, vibr.–rot. bands, pressure broadening 3=9510
- DCl, vibration and vibration-rotation bands, pressure broadening 0=9795-6
- $DCrO_2$, mag. susceptibility and e.s.r. 1=11413
- $DCrO_2$, O–O bond by neutron diffraction crystallog. 3=1334
- D_2—Ne mixture, phase separation temp. dependence 4=24178
- DF, deuteron quadrupole coupling, calc. 2=6225
- DF, nuclear interactions in, from molec. beam mag. resonance 1=7492
- DF, u.v. spectrum, analysis 0=9818
- DN_3, force constants calc. 2=6133
- DN_3, microwave and millimeter wave spectra 4=20067
- DNCS, molal thermodynamic props. 4=18246
- DNO, absorption spectrum analysis 2=10257
- DO_2, e.s.r. from D_2O_2 soln., 77° K, u.v. irradiated 3=20012
- D_2O aqueous solns., isotope effects of α- and β- radiation 2=4557
- D_2O crystals, mechanical damping 0=3146
- D_2O, diffusion length meas. rel. to concentration 2=22529
- D_2O, increase of conc. in H_2O 2=3669
- D_2O, liquid, molec. reorientation rel. to dielec. relax. and n. q. relax. 4=18221
- D_2O, mol. force field model 2=14243
- D_2O, neutron Fermi age calc. for moderation 4=21874
- D_2O, neutron scatt. in, energy distrib. 4=16092
- D_2O, neutron transport mean free path 1=7250
- D_2O, psychrometer table for humidities 1=9505
- D_2O, solid, thermal expansion, melting point to 18°K 2=3847
- D_2O solvents, transition metal ions, spectral and reactivity differences 0=13455
- D_2O, specific heat meas. 2=5000
- D_2O, thermal cond. of gaseous phase, 100°-500°C 4=235
- D_2O, thermal conductivity, 75° to 260° C, up to 300 atm 1=18396
- D_2O, thermal neutron diffusion 3=2270
- D_2O, 2·8 MeV electron beam, energy loss 1=18935
- D_2O vapour, ultrasonic attenuation and velocity 4=14214
- D_2O^{18} vapour, vibration frequencies 0=7755
- D_2O, vib. props., liquid and solid 2=10321
- D_2O_2, polycrystals, e.s.r. line shape 2=2297
- $DON^{14,15}O$ vapour, u.v. absorpt. spectrum 3=6403
- $D_2PO_2^-$, spectral analysis 2=12330
- D_2Se, microwave spectrum analysis 2=14264
- DT, soln. in e-D_2, vapour-liquid rquilibria, from triple pt. to crit. temp. 3=21626
- DT, thermal diffusion and separation in D_2 1=13976
- H_3A, MO–LCAO approx., Walsh rules 2=14308
- H halides, proton shielding consts. rel. to dipole moments 0=20681
- halides, radiolysis in liq. phase 4=23680
- halides, rotation—vibration bands, perturbation 1=13992
- H halides, solubility, var. solvent, temp. 4=24177
- H halides, vibr.—rot. lines, pressure effects 3=6377
- trihydrogen Li selenite, crystal dislocation obs. by etching 4=9969
- trihydrogen lithium selenite single crystals, dislocations 4=12750
- hydrogen peroxide solns., u.s. absorpt., velocity 2=2719

Hydrogen compounds—contd
polyoxides, possible existence 0=17848
HBF_4, aq. soln., X-ray analysis 4=21100
HBO_2, crystal structure, atomic, -130° C 4=13582
HBO_2, three cryst. forms, ht. of soln., transition and form. meas. 4=14452
H_3BO_3 aq., dielec. loss, chem. relax. effects 3=5447
H_3BO_3, solutions, neutron spectra, thermal 4=911
HBr, chain reaction, effect of pressure changes 2=4535
HBr, compression and solid state phase transitions 2=4357
HBr, corrosion of Pt and Zr, effect of α-rays 0=12100
HBr, crystalline, absolute i.r. intensities 3=25460
HBr, cryst., far i.r. spectrum at 77°K 3=938
HBr and DBr mol. crystals, far i.r. spectrum 4=20444
HBr, fundamental band, strengths and self-broadening widths 4=12452
HBr, induced Q-branch fundamental i.r. bands 3=248
HBr—inert gas mixture, vibr.-rotation spectrum 4=3838
HBr, i.r. absorption, Q-branch study, perturbed 0=7752
HBr, liquid, proton spin relaxation 3=21408
HBr molecular beam, crossed with K atomic beam, reactive scattering 1=6064
HBr, rel. of props. to polar nature of crystals 1=2362
HBr—rare-gas mixtures, absorption spectra 3=4747
HBr, rotational transitions, absorption coeffs. 2=20791
HBr^{79}, spectral lines, foreign gas effects 3=7244
HBr, spectrum, vibr.-rot. φ branch displacement in solns. 4=25634
HBr^+, $^3\Sigma^+ - {}^2\pi_1$, 4 new bands 4=3857
HCN adsorpt., CsCl, NaI films, bonding 4=29198
HCN, broadening of ν_3 lines, due to Ar, CO_2, HCl 4=3874
HCN, DCN spectrum, adsorbed on metal oxides, as crystalline HCN 4=10618
HCN, far-u.v. spectrum 2=14284
HCN, ground state structure 2=20834
HCN, i.r. spectra from 2000 to 3600cm^{-1} 4=12485
HCN, l-type doublet transitions in isotopic molecules 1=9930
HCN laser sources, 4=24904
HCN, precise i.r. spectral wavelengths 1=12985
HCN, pure rotational absorption lines 3=24019
$HC^{12}N^{15}$, 3.5 mm rotation resonance 3=14767
HCN, vibration—rotation bands 4=20066
HCN, vibrational spectrum in org. solvents, freq. shifts and band intensities 0=10669-70
HCO radical, electronic absorption spectrum 4=6594
HCO radical, low-temp. i.r. study of chemistry 4=25757
HCOF, DCOF molecular vibr., thermodynamic props., calc. 4=12503
HCl, absorption and vel. of sound, rel. to rotat.
HCl, aqueous, conductivity, electrical, 300-383° 3=18450
HCl, aq. soln., compressibility, from u.s. velocity 1=1736
HCl, aq. soln., D substitution, effect on glass transform. temp. 3=23492
HCl, aq. soln., elec. cond. rel. to pressure 4=2706
HCl, aq. soln. Sn^{4+} recomb. luminescence 2=21912
HCl, bands, shifts, pressure induced, due to noble gases 4=22358
HCl, compression and solid state phase transitions 2=4357
HCl, cryst., far i.r. spectrum at 77°K 3=938
HCl crystal, overtone frequency and double excitation 4=7136
HCl, crystalline, absolute i.r. intensities 3=25460
HCl, DCl, spectra, pressure broadening 4=9702
HCl and DCl mol. crystals, far i.r. spectrum 4=20444
HCl^{35}, DCl^{35}, rotational and vibrational consts. 2=3728
HCl, dissociation by neutron bombardment 4=3918
HCl, electronic structure 4=25649
HCl, eqns. of state and density meas. 2=17509
HCl, exchange reactions from gas with NaCl crystals 1=4076
HCl, frozen 0.1 M soln., proton mobility 1=1486
HCl gas, i.r. absorption, up to 1200°K 3=16661
HCl gas, rel. to line shift and oscill. in DCl spectrum 4=17283
HCl, gaseous, thermodynamic props., 273-5000°K 0=964
HCl, induced Q branch fundamental i.r. bands 3=248
HCl—inert gas mixture, vibr.-rotation spectrum 4=3838
HCl^{37}, i.r. absorption bands, dispersion 3=14345

Hydrogen compounds—contd
HCl, i.r. absorption in vibration—rotational bands 0=9793-4
HCl^{35} infrared bands 1=842
HCl, i.r. emissivity on anharmonic model 2=12327
HCl, i.r. emissivity, at elevated temp. 1=12926
HCl, i.r. line intensities, width in 2-0 band 2=3743
HCl, i.r. refract. index, using Michelson interferometer 0=16820
HCl, i.r. spectrum in liq. Xe 2=17464
HCl^{35} $J = O \rightarrow 1, 3$ hyperfine components meas. 4=24858
HCl, liq. and gas, proton spin—lattice relax. 3=11808
HCl, liquid and gas, proton spin—lattice relax. 3=21416
HCl, liquid, proton spin relaxation 3=21408
HCl, liquid and solid, γ-radiolysis, yields of H_2 2=19165
HCl liquid, viscosity meas. 4=14147
HCl, matrix-isolated, rot.-vibr. spectrum 2=22971
HCl mixed with Ar and Xe, complex formation, spectral data 4=3858
HCl, molecular collision cross-sections from i.r. absorption line-widths 0=15788
HCl, molecular vibration—rotation levels, perturbation by Kr and Xe 0=15726-7
HCl molecule, polarization, calc. 2=8074
HCl, molecule, SCF MO one-centre basis set 4=20048
HCl overtone lines, self-broadened, widths 3=4748
HCl polar mol., n.m.r. shifts caused by added foreign gases 4=28265
HCl, pressure-induced shifts of i.r. lines 3=17607
HCl^{35}, proton r.f. spectrum 1=19661
HCl—rare-gas mixtures, absorption spectra 3=4747
HCl, red form of solid in HCl^*—CCl_4 exchange reaction 0=8300
HCl, rotational constants 0=15701
HCl, rotational transitions, absorption coeffs. 2=20791
HCl, shock-front structure and reflectivity 1=167
HCl solns., conductivity electrical, 50° 3=23547
HCl, solutions, p.m.r., var. conc., mechanisms 4=206
HCl, sound propagation in critical-temp. region 3=18858
HCl, sound velocity in critical region 3=18859
HCl spectra, pressure shifts by noble gases 3=11837
HCl spectral emissivity, 1000-3400 cm^{-1} 1=851
HCl, spectral lines, foreign gas broadening. 3=173
HCl^{35}, spectral lines, foreign gas effects 3=7244
HCl, spectral shifts, pressure-induced, due to foreign gases 0=5926-8
HCl, spectral perturbations of HCl—A mixtures 1=3532
HCl spectrum, gas, pressure shift due to inert gases 4=15336
HCl spectrum, i.r., discrepancy removal 4=17282
HCl, spectrum, pressure shift due to inert gases 2=16508
HCl, spectrum, vibr.-rot. φ branch displacement in solns. 4=25634
HCl, threshold ionization by electron impact 0=3737
HCl, trapped in Ar lattice, molecular rotation 4=3837
HCl, 2—0 bands, absorption and emission, pressure shifts 4=1264
HCl, u.s. velocity and absorption near critical temp. 2=13375
HCl, vibration-rotation band, line shifts due to Xe 2=12320
HCl, vibr.—rotation lines, impact broadening theory 4=1265
HCl, vibration—rotation lines, inert-gas broadened, impact theory 4=9709
HCl, vibrational transition probabs. calc. 3=12803
$HCo(CO)_4$, proton chemical shift 2=18462
$HCrO_2$ and $DCrO_2$, H bond study 2=6203
$HCrO_2$, mag. susceptibility and e.s.r. 1=11413
$HCrO_2$, O—H—O bond by neutron diffraction crystallog. 3=1334
HD^+ ion, vibrational level pair, excitation, possibilities, for i.r. maser 3=15327
HD, dipole moment 1=17373
HD, dipole moment function 0=4238
HD, dissociation energy, u.v. absorption edge 1=6052
HD, eqn. of state, and HD—He mixtures, $<$ H_2 b.p. 0=16734
HD, gaseous, viscosity below 80°K 0=8703
HD, H and D mixtures, chromatographic separation 1=13977
HD, H_2, isotope shift in nuclear mag. shielding calc. 4=28264

Hydrogen compounds—contd
HD liq., surface tension rel. to temp., expt. 4=27164
HD, μ-mesic, bound states 1=14140
HD, Raman spectra, liquid and solid 2=2721
HD, solid, crystal structure 1=4043
HD solid, specific heat, along saturation curve 4=22492
HDCO, microwave spectroscopy 1=12026
HDO, beam maser spectroscopy 0=4213
HDO, rotational spectrum, h.f.s. 2=10254
HDO, vibration–rotation band 0=5929
HDO_2, microwave spectral series, $\Delta J=0$ 1=4930
HDS, h.f.s. of microwave spectra 4=9733
HF, approximate Hartree–Fock calc. 2=8114
HF, charge distributions, analysis 4=12453
HF in combustion gases at 1000°C, i.r. spectral radiances and emissivities 4=12454
HF, correlation energy 4=12507
HF, crystal structure 4=7137
HF-DF mixed crystals, i.r. spectra 4=7137
HF, electric dipole moment determ. from rot. mag. moment 4=30435
HF, electronic energy as power series in internuclear distance 2=6184
HF, force consts. and internuc. distances, one-centre calc. 3=22564
HF, γ-irrad. at 4.2°K, H atom free radicals, e.s.r. 2=3791
HF gas, radiative transfer calc. 4=5108
HF, in gaseous mixtures, i.r. absorptiometer 0=4754
HF, Gaussian wave-functions 4=25650
HF, in H_2O, neutron scatt. in, energy distrib. 4=16092
HF, heat of formation 0=7007
HF, i.r. emissivity on anharmonic model 2=12327
HF, infra red, spectra, absorption, 22-250μ 4=9711
HF, i.r. spectrum, line positions and shapes 2=20808
HF, LCAO wave-functions with Hartree–Fock AO's 0=1511
HF, liquid, acoustic velocity and thermodynamic props. 0=3524
HF, low-frequency molecular motions, rel. to molec. structure 4=6568
HF, mag. antishielding const. of F, meas. 4=12519
HF, magnetic susceptibility 2=20807
HF, molecular dissociation energy calcs. 4=9781
HF, mol. vibr.—rot. interaction calc., m = +8 to +12 4=20045
HF, molecular wave-functions 3=8256
HF, molecule, diamag. suscept. calc. 3=8258
HF molecule, diamagnetic susceptibility, theory 3=8240-1
HF, molecule, elec. polarizability tensor calc. 4=1256
HF molecule, far-u.v. spectrum 2=14284
HF molecule, mag. moment, electronic calc. 2=14239
HF molecule, mag. shielding const. 1=12318
HF molecule, SCF MO one-centre basis set 4=20046
HF, monomer–dimer spectra, overlapping 0=5940
HF, nuclear magnetic interactions 1=2347
HF, nuclear magnetic relaxation 3=22600
HF, potential energy curves 0=17733
HF, pressure-induced band, fine structure 4=17284
HF, rotational transitions, absorption coeffs. 2=20791
HF, SCF-MO wave-functions 2=2013
HF, spectra, perturbation of lines by compressed gases 0=20632
HF, Stark effect and hyperfine structure 3=19984
HF, u.v. spectrum, analysis 0=9818
HF, united atom model 0=20671
$(HF)_2$, H-bond, electrostatic contrib., multicentre integrals 4=3875
$(HF)_n$, dissociation, heat transfer calc. 2=2763
HF_2^-, ground-state wave-function 1=9939
H^+He electronic structure 1=14058
HI addition to isobutene and vinyl chloride 3=11338
HI, collisions with K in beams 2=532
HI, fundamental and overtone line spectra 3=25097
HI gas-phase addition to butene-2 4=26750
HI gas-phase reaction with CH_3I 3=11339
HI, ionization by photon impact, efficiency 0=17720
HI, kinetics of gas phase addition to ethylene 3=6915
HI, Morse oscillator matrix elements for vibration—rotation lines 4=9710
HI, photolysis at 1849 A 4=23672
HI, rel. of props. to polar nature of crystals 1=2362
HI, reaction with ethyl iodide 3=20978
HI, reaction with propylene 2=21582

Hydrogen compounds—contd
HI, reactions with alkyl iodides 1=5108
HI, spectral line strengths and widths 3=4749
HI, spectrum, $\nu_{0\rightarrow 3}$ vibr.—rot., and transition moment 4=28192
HI, spectrum 1.2-3μ 3=24023
$2HI \rightleftharpoons H_2 + I_2$, thermal conductivity 4=24270
HNC, i.r. identification 3=22584
HNCO and DNCO, photolysis, low-temp. i.r. study of intermediates 4=23674
HNCN, free radicals, spectrum and structure 3=8307
HNCO, force constants calc. 2=6133
HNCO, mols., Urey—Bradley force field, and thermodynamic props. 3=12799
HNCS, molal thermodynamic props. 4=18246

- OH-radical in, under γ irradiation 3=25150

Illumination
- See also Brightness.
- artificial daylight sources, specifications for 3=11406
- "average" outdoor conditions, photogr. criteria 0=3661
- of bubble chamber, CERN 2m 4=5909
- of bubble chamber, cylindrical condensing system 4=5907
- bubble chambers, photography of small bubbles 3=24559
- of cloud chamber, by electronic flash tubes 4=5908
- daylight, artificial, colours fluorescent paints rel. to those in natural daylight 3=14307
- daylight factor meter 0=14784
- daylight, spectral distrib. rel. to correlated colour temp. 4=29294
- doublets, aspheric and spherical set, illuminance rel. to focal length 4=11330
- electroluminescent panels 2=2260
- luminance, heterochromatic, rel. to Stiles' colour-mixture functions 2=1245
- luminance and luminous emittance 0=147
- modulation, sinusoidal, by chopper aperture 3=18969
- from overcast sky 0=5128
- from paraboloidal solar mirror 2=11469
- partially coherent, nonlinear transmission analysis 2=9369

Illumination—contd
of plane surfaces bounding absorbing medium, with point source 1=5336
plane surfaces by point source in absorbing medium 0=14793
point source, enhancement by boundary plane refl. 4=21273
system for micrography of opaque objects 2=19691
W radiation, spectral power distrib. from colour temp. 3=7322

Image convertors and amplifiers
(Heading introduced in 1963)
acoustical, limits to sensitivity 4=5334
boundary layer optical effect, use 2=9383
camera 2=11514
convertor, electron transit time calc. 4=29981
detection efficiency, photoelectric 3=19326
development for use as fast shutters 4=5715
electroluminescent panel X-ray image intensifiers 2=5426
electron avalanches, photographic meas. 3=12077
electron camera emulsions, linearity 2=15765
electron image formation, Castaing microprobe 3=21015
electron, intensifiers 4=24341
electron optical convertor, resolving power 3=24370
electron-optical, use in spectral time scans 3=24036
electron, in photoelec. polarization effect study 2=7647
electronic acoustic image convertor 2=9345
electronic-optical transducer, multistage, image control 4=431
as framing camera, high-aperture, high-speed 2=7417
framing, using magnetic diffraction 3=7640
gated, for high light intensities, use 3=14644
generator for linear and frame sweep, electron-optical light amplifiers 3=24361
high-speed convertor, 20 n sec exposure, brightness gain 50 4=18445
i. r. converter, with liquid crystal viewer, for laser work 4=29750
image-intensifier, electroluminescent, for nuclear particle beam detection 4=30134
image intensifer tube, "multipactor" type 3=19325
image orthicon, astronomical use 3=9144
intensification in field-ion microscope 4=5721
magnetically focused, limits of resolution 2=11699
magnification reduction due to conical and parallel fields 3=19327
orthicon camera rel. to astronomical image integration 4=23834
orthicon, field-mesh image, nondestructive readout 4=24342
orthicons, noise meas. 4=29977
for particle-track photography 4=3265
photo-electronic image intensifier in high-energy physics 2=9622
for photography of faint objects 2=19737
PIM-3, resolving power 3=14648
use for recording radiation from pulsed plasma 4=21514
SERVAL, i. r., using photoconductive–photoemissive layers 4=5368
spark counter, single gap, for image intensifier 3=9849
for spectral time scans 4=314
superopticon, for time sweep of rapid events 3=24352
Superorthikon intensifier, in emission microscopy 2=8904
test pattern source, variable-pattern 4=16201
thermal, efficiency theory 2=7455
tube, with photoconductive target and sorting mirror 4=360
u.v.-sensitive tube, design and perform. 3=14643
u. v., vacuum, photoemission–scintillation detector 2=19696
ultra-high speed tubes, review 3=21579
ultrasonic, electronic at 50 c/s 2=11477
Vidicon, PbO target, fatigue model 2=23466

Impact
See also Ballistics
anelastic rebound, restitution coeff. and time of contact meas. 4=13366
ball apparatus, dynamics 0=19031
bars or cylinders, propag. of elasto-plastic waves 1=16007
batting a ball, velocity vectors 3=21268
billiard-ball collisions, teaching device 3=11654
"bouncing ball", eigenvalue problem, asymptotic soln. 0=3455
colliding plates, explosive bonding 3=11195

Impact—contd
constant velocity, study of initial conditions 1=6457
crater formation, at high velocities, lunar models 0=6
crater formation, by steel projectiles in rock 0=11990
cushioning materials, analogue computer meas. of compression 1=21153
cylinder, rigid circular, on elastic solid calc. 3=94
deformable bodies, non-disruptive, model 4=18127
demonstration apparatus using pendula and shadow projection 1=12835
demonstration with plastic croquet balls 3=95
diamond, fracture by spherical impacter 2=16967
drops on rigid walls, theory 4=2646
elastic, as linear three body problem 4=11130
elastic, on material systems, theory 2=15525
elastoplastic bar on rigid barrier 2=21858
elastoplastic bar on rigid barrier 3=1644
glass, hardened, fracture 2=8747, 14907
Hertz's theory confirmation 1=18334
high-speed, review 2=15526
impact—vibration system, model tests 3=23823
impinging load, transversely, on cantilever, contact duration, expt. 4=27242
iron particles, at v. high velocity 0=11989
jets, shaped-charge, penetration 3=11194
liquid, high-speed, on solids 1=20329
metal bodies at high speed, 2-18 km/sec, theory 2=7158
metals, hypervelocity, shock waves 3=21486
"meteor bumper" space vehicle shield, experiments with Pb 1=1665
meteorite, and drop and plastic surface 4=23901
Newtonian theory of axial elasticity 0=693
notched beams, dynamic stress conditions 1=11720
perfectly elastic, of material systems, subsequent motion 3=1645
plastic deformation of half space and revolution body 4=11142-3
plastic rotating body with plastic half-space 3=16558
plastic surface and drop, and meteorite and earth 4=23901
radioactive projectiles in stainless steel and Al, fraction staying in crater 3=25646
sand, crater volume and bullet deformation 1=18335
scattering, classical, central-force, calc. 4=27125
solids, mechanical response to extreme e. m. radiation 2=11398
solids, on solids, at > 10 km/sec velocities 0=11991
spinning impact of imperfectly elastic bodies 1=15770
steel impacting projectile, depth of indentation on $BaTiO_3$ ceramic 0=10629
steel spheres, coeff. of restitution 2=7157
three-dimensional wedge on compressible fluid 0=6739
trolleys, momentum expt. for teaching lab. 1=12834
Al alloy, high temp. behaviour 4=20665
Al alloy 24S-T, impact fracture 3=3244
Al, deformation striations, etching, electron microscope exam. 3=23534
Al and Cu, pit formation, by liquid drops and steel spheres 0=8142
Ge, dislocation and crack formation 3=20758
Mg with high velo. steel cylinders, wave struct. prod. 4=20668
NaCl crystals, deformation and crack structure caused by impact treatment 4=30787
Pb alloy, high temp. behaviour 4=20665
Pb, cratering by hypervelocity steel pellets 2=6729
PbS, figure formation and dislocation and slip 4=26517
Sn single crystals, deformation twinning under impact loading 0=21115
W rods, notch–impact behaviour 4=30789
Zr–Nb, neutron irrad., impact props. 3=1234

Indeterminacy
causality principle and second law of thermodynamics 0=18966
classical relations giving uncertainty for long times 2=11289
demonstration in electron diffraction obs. of colloids 4=5702
entropy and uncertainty 2=13240
gravitation effects 4=27035
illustration by particle oscill. in electron beam 4=5704
L_z and φ, modification 3=18734-5
new applications of principle, use in teaching 2=9140

Indeterminacy—contd
  in phase and amplitude, interrelation 4=5054
  probabilities, symmetry, invariance requirements 1=18276
  in quantum mechanics, von Neumann theorem 0=14510

  - crossed-grating, for solar observations at 20 cm wavelength 4=4944
  - e.m. waves, for radio source size measurement 1=8022
  - electromagnetic waves, radio-interferometer, Nançay, radio sources obs. 1=18136
  - electron biprism interferometer, applications 2=218
  - electron, for crystal phase meas. 4=2007
  - electron, Fe whisker study 1=11548
  - electron interferometers, compensating alternating mag. fields 1=16418
  - electron three-beam interferometer 1=16417
  - electron, with three biprism fibres 2=22271
  - Fabry–Perot etalon for use in 2.5-10 μ region 1=10599
  - Fabry–Perot, as laser modulator 4=19272

- **Interferometers**—contd
  - Fabry–Perot, for rapid-scan spectroscopy 1=8228
  - Fabry–Perot, recording, pressure regulator 4=8447
  - Fabry–Perot, scanning, for spectral line profile recording 4=18401
  - Fabry–Perot, for spectral line scanning 3=21541
  - Fabry–Perot, ultra-rapid scanning 3=261
  - Fourier spectrometry, apodization 3=9612
  - Michelson for far i.r. spectroscopy 4=24367
  - microwave, polar, for plasma electron density meas. 3=4148
  - Moiré fringe interpolator 4=8443
  - noise analysis of interferometer spectrometers 4=27312
  - radioastronomical, sensitivity and directivity increase 1=18140
  - radio telescope interferometer at Royal Radar Establishment 1=15527
  - radio, tracking, three base-line 3=18648
  - resonant modes 4=19266
  - for spectroscopy, Fourier transform, compensated field 3=21540
  - for testing biological cell counting chambers and cover glasses 4=11359
  - three planes, semi-reflecting, non-parallel 4=5117
  - **acoustic waves**
    - absorption meas., u.s., gas, from impedances, var. reflector position 4=2728
    - operation, and condition for absorpt. coeff. expression 4=16188
    - phase comparison interferometer for velocity changes < 1 mm/s 1=16039
    - for plane waves, theory, elec. impedance of loaded piezoelec. bar and plate 0=6874
    - for steam, in saturated and supersaturated states 1=201
    - temperature meas., 2°–20°K 2=17559
    - two crystal 3=16719
    - u.s., Fabry–Perot type 1=16040
    - u.s., reflection at radiator, theory 0=10734
    - u.s., theory and exptl. check 0=6873
    - u.s., with 2 transducers, and varying-frequency spectroscopy 4=5333
    - ultrasonic, elec. circuits, choice and tuning 4=290
    - ultrasonic (2 Mc/s) interferometer 2=1240
  - **electromagnetic waves**
    - beats between 2 waves due to rot. or object insertion 4=27650
    - Boltzmann, spectrometry of plasmas, 0.1-10 mm 3=9957
    - compound, for observations on intense radio sources, construction 4=4931
    - compound, 10 cm wavelength, applic. solar studies 0=12262
    - compounds, radio telescope, single-lobed receiving pattern 0=4878
    - corner mirror use 4=27651
    - Fabry–Perot, as confocal multimode resonator for mm to optical wavelength masers 1=7144
    - Fabry–Perot, high-resolution 0=11044
    - Fabry–Perot, microwave diffraction theory 0=7224
    - Fabry–Perot, microwave, optical requirements 4=24842
    - Fabry–Perot, mm free and constrained waves 4=24843
    - Fabry–Perot, as model for laser resonator 3=12360
    - Fabry–Perot perforated plates for mm waves 4=19214
    - Fabry–Perot as resonator 2=1590
    - Fabry–Perot, resonators for mm and sub-mm waves 1=8386
    - Fabry–Perot, spherical mirror 4=19213
    - Fabry–Perot, tunable sub mm, grids with holes 4=19212
    - intensity, two new types for coherence phase and magnitude meas. 4=3131
    - Lloyd's mirror and variable spacing instrum. 0=8482
    - for meas. of source angular structure 4=4933
    - Michelson, microwave diffraction theory 0=7224
    - microwave, with coherent background 1=13185
    - microwave dual, for plasma diagnostics 4=18902
    - microwave, X-band, calc. and meas. 3=12313
    - multiphase, for solar source location 0=6567
    - Nançay grating instrument, for 169 Mc/s solar studies 0=4849
    - Nançay, for radioastronomy 0=826-7
    - for plasma 4=525
    - for plasma density meas. 4=18920
    - plasma density meas., use of focusing lenses 3=7576
    - plasma electron density det. 2=9600
    - plasma, reflected, modulated 4=30050

Fabry—Perot, laser modes in active material 4=27679
Fabry-Perot, as laser resonator 1=2853
Fabry—Perot laser resonator 3=9590
Fabry—Perot, as laser resonator, stationary modes 4=19265
Fabry—Perot, as laser resonator, theory 4=19264
Fabry-Perot, low-resolution, spectroscopic applications 0=16855
Fabry—Perot, magnetic fine adjustment 4=8448
Fabry—Perot, maser action of atoms inside 3=7352
Fabry-Perot, mechanical displacment of etalon 0=16851
Fabry-Perot, mirrors, for 2350-20 000 A, multilayer 3=24050
Fabry-Perot, multilayer coatings as mirrors 0=16869
Fabry—Perot, multilayer dielec. coatings for u.v., visible 3=19003
Fabry-Perot, multiple layer dielectric reflecting surface 2=5174
Fabry—Perot, near u.v., metallic—dielec. mirrors 3=3889
Fabry-Perot, for optical maser 0=1202
Fabry-Perot, as optical maser 2=6103
Fabry—Perot, oscillating, fringe pattern, depend. on vibration amplitude, expt. and theory 4=24381
Fabry—Perot, oscillating, for spectrophotometry 3=16768
Fabry-Perot, parabolic 2=7384
Fabry-Perot, parallel strip-spring movement 2=2882
Fabry-Perot, photoelec. for nightlow studies 0=10445
Fabry-Perot, with photoelec. scanning 2=114
Fabry-Perot, for photoelectric spectrometer 0=3634
Fabry-Perot, rapid-scanning with auto parallelism control 2=17643
Fabry-Perot, recording, for night-sky study 0=16741
Fabry—Perot, refl. coating effect on optical thickness 4=21312
Fabry—Perot, remote controlled 4=24382
Fabry-Perot, rings, thermal sweeping 0=16876
Fabry—Perot, Russian demonstration 4=8449
Fabry-Perot, with scanning by pressure variation 0=16872
Fabry—Perot, scanning, for spectral line profile recording 4=18401
Fabry—Perot, scanning wedge modification 4=21311
Fabry-Perot, single thin film or semi-transparent mirrors 0=16885
Fabry—Perot, spectroscopic applications 1=1820
Fabry-Perot, spherical, etalon 0=16873
Fabry-Perot, for student lab. 3=260
Fabry-Perot, surveying topography of highly plane surfaces 2=2872
Fabry-Perot, two etalons for high resolutions 0=5879
Fabry—Perot, for u.v. with dielec. multilayer coatings 0=16881
Fabry-Perot, wavelength det. in atomic spectrograph 2=2880
far i.r., for high electron densities meas. 3=9611
Fizeau, double-pass type 1=5351
Fizeau, double-passed 0=16890
Fizeau mirror system, for testing homogeneity of glass 4=29738
using four diffraction gratings 0=3645
four-plate, field image illumination 4=18418
for Fourier spectroscopy, without collimation, theory 4=11352
gauge, fringe displacement meas. 2=22052
grating, for Ronchi test, historical review 2=22049
grating, for Ronchi test, historial review 4=18414
gratings, aluminized, efficiency in 555-1600 A range 2=11497
Haber—Loewe, refractive index meas. of solutions 1=5278
high-reflecting films, assessment and selection 0=1038
for i.r. refractive index meas., of liquids 0=14803
i.r., two-beam, sensitivity increase 2=9060
Jamin, double-passed, for small angular displacement meas. 1=1824
Jamin, modifications for optical testing 4=18417

Interferometers—contd

Fe, meas., study of magnetization processes 0=11873
Fe, peak, 250°C 3=8756
Fe, sintered and plastically deformed, temp. depend. 1=9084-5
Fe, technical, effects of strain-ageing 4=13415
Fe, 250° C, due to dissolved oxygen or not 3=23300
Fe whiskers 3=8763
Fe wires, carbonized 3=13333
Fe wires containing carbon, strain ageing 1=20313
Fe wires, effect of plastic deformation 1=14854
Fe—Al alloy, rel. to atomic order and ferromag. props. 3=25605
Fe-Al alloys, rel. to mag. anisotropy 2=8620
Fe-Al alloys, Zener and magnetic relaxation 2=21401
Fe_3Al-type alloys, rel. to ordering processes 4=1948
Fe—C alloys, α-tempered 3=13539
Fe—C, rel. to diffusion, by neutron irrad. 3=10702
Fe—C, precipitation of C study 3=6867
Fe-C system, cold-work peak 2=21409
Fe-C-N alloys, 0°-100°C 2=4312
Fe—Cr alloys, quenched, damping capacity 3=5060
Fe—Mn alloys, rel. to martensitic transformation 1=1305
Fe—Mo alloys, damping capacity rel. to quenching temp. 4=1949
Fe-N alloys 0=16209
Fe—N, cold-worked, interstitial—dislocation interaction 3=23293
α-Fe, N peak, quenching effects 1=14855
Fe-N system, cold-work peak 2=21409
Fe—Ni alloy (Invar), rel. to magnetic diffusion 3=15977
Fe—Ni, stress induced amplitude dependence 1=20312
α-Fe_2O_3, effects of temp. and mag. field 2=6714
Fe_3Pt alloy, anomaly at Curie point (71°C) 0=11972
α-Fe—W, temp. depend. 1=4060
Ga, temp. depend. 2=744
Ga, temp. depend. 3=5017
Ge, calc. of O diffusion 1=17560
Ge, dislocation mobility 3=23288
Ge, rel. to semicond. props. 1=1303-4
H, neutral and ionized 2=15300
Hg, liquid 2=15585
Hg-Tl alloys, liquid 2=15685
Ho, rel. to temperature 3=11091
KCl, additively coloured 3=23291
KCl crystals, at low temp. 0=21098
LiF, dislocation damping 2=21408
LiF, rel. to dislocation density after plastic deformation 1=14856
LiF, effect of plastic deformation 2=21413
LiF, effect of plastic deformation and X-irrad. 2=10738, 14871
LiF, at low temps., annealed and cold worked 2=8709
LiF peaks 20°-220°K 1=14857

Internal friction—contd
LiF, recovery after plastic deformation 4=10389
LiF, u.s. attenuation study 2=20927
Mg, neutron irrad., rel. to fatigue 2=18983
Mg, time-dependent 0=4558
Mg and Mg alloys, Bordoni peaks 3=22650
MgO, dislocation damping at low freq. 3=3214
MgO, rel. to dislocation relaxation 1=11204
Mn–Cu alloys, tetragonal 2=12737
Mo, cold-worked, dislocation relaxation spectrum 1=7821
Mo, dislocation relaxation 2=21412
Mo, peak 4=26520
Mo, Mo–Zr, Mo–Re, 20° to 700° C 4=7435
N in Cr rel. to diffusion 2=21061
NaCl, dislocation damping 2=21408
NaCl, effect on Young's modulus 1=20307
NaCl, effects of vibration 0=21100
NaCl, γ-irrad., rel. to dislocation pinning 2=21404
NaCl peaks 20°-220°K 1=14857
NaCl, single crystals, deformed 0=11973
Nb, absorption peaks, rel. to dislocations 1=6446
Nb, α and β-peaks, deform.-induced 3=23303
Nb, anelasticity produced by plastic deformation, 4.2–300°K 0=10258
Nb, cold-worked, dislocation relaxation spectrum 1=7821
Nb, dislocation relaxation 2=21412
Nb, effect of Zr impurities 2=23738
Nb, interstitial—dislocation interaction 3=23309
Nb, low-temperature peak 1=11504
Nb_2O_5, α-phase, in vacuum reduction technique 2=10493
Ni, in alternating mag. field 0=13814
Ni, cold worked, stage III recovery meas. 4=26523
Ni, crystal interstitial rot. effects on peak 4=28968
Ni, rel. to deformation amplitude 3=6779
Ni, effect of annealing in moist H_2 3=20722
Ni, elastic modulus variation with mag. field strength 0=11872
Ni, electrodeposited, rel. to mag. props. 2=16916
Ni, and fatigue, thermal, and grain struct. and dislocations 4=23179
Ni, heat treatment effects 4=23178
Ni, rel. to interstitial atoms 1=3659
Ni, sintered and plastically deformed, temp. depend. 1=9084-5
Ni, temp. depend. 1=3962
Ni, temp. var. 3=3209
Ni, rel. to Young's modulus 0=11971
Ni–Au alloy, rel. to temp. 3=1217
Ni—Co alloys, effect of magnetic annealing 3=8681
Ni–Cr alloys, temp. depend 0=1933
Ni–Cr–Ti–Al alloys, temp. depend. 0=1933
Ni–Fe(66:34), effect of heat treatment with mag. fields 4=23187
NiO, Li-doped, rel. to semicond. props. 2=21415
NiZn ferrite, rel. to Young's modulus 0=11971
Pb 0=18245
Pb, effects of temp (room-200°C), and number of elastic-plastic cycles 3=6778
Pb, overstressed microregions 3=11142
$PbMg_{\frac{1}{2}}W_{\frac{1}{2}}O_3$, anomaly, near antiferroelectric Curie point 4=1953
Pt, cold worked, stage III recovery meas. 4=26523
Pt, 4·2-300° K, after 4·2° K deformation dislocation relaxation peaks 4=7429
Pt, recovery, after load removal 1=7815
Pt wires, Bordoni peaks, position, at low temps. 3=18166
Re, high-temp. damping 0=3145
Si, calc. of O diffusion 1=17560
Si, rel. to dislocation kink motion 3=10663
Si, rel. to semicond. props. 1=1303-4
Sn, overstressed microregions 3=11142
Ta, cold-worked, dislocation relaxation spectrum 1=7821
Ta, dislocation relaxation 2=21412
Ta, high-temp. damping 0=3145
Ta, rel. to interstitial—dislocation interaction 3=23292
Ta, peaks, low-temp., amplitude-dependence 3=18167
Ta—H system 3=18168
Tb, rel. to temperature 3=11091
ThO_2—CaO, theory, rel. to dielec. and mech. relaxation 3=20700
Ti, cold worked, recovery on annealing 4=7461

Internal friction — contd
Ti–O alloys, interaction of interstitial and substituted solutes 2=21002
Ti–O–Me alloys, interaction of interstitial and substituted solutes 2=21002
TiO_2, lattice friction in plastic deform. 3=23328
U, polycrystalline, rel. to temp. 2=12843
V, from ordering of impurities 3=20697
V–H alloys, H conc. depend., –190° to +210° C 3=21286
W, cold-worked, dislocation relaxation spectrum 1=7821
W, deuteron irrad. effects, model 2=12842
W, dislocation relaxation 2=21412
W, high-temp. damping 0=3145
W, temp. depend. rel. to recovery after work hardening 3=11174
YFe garnet, rel. to microwave acoustic losses 2=10322
Yb, peaks due to O_2 and N_2 diffusion 4=15497
Zn, dislocation damping theory 2=21406
Zn, effect of Hg, Sn, Bi, Wood's metal and Pb films 2=21569
Zn, polycrystalline, and creep 3=18190
Zn, polycrystalline, in tension 3=18200
Zr, effect of internal irradiation 4=4494
Zr, peak at low temp. 4=26533
Zr, phase transformation 2=21544
liquids
See Liquids; Viscosity, liquids

Internal stresses
See Stresses, internal

Interplanetary magnetic fields
(Heading introduced in 1963)
as cause of comet tails 4=4891
and cosmic ray streaming due to irregs., and daily var. 4=29353
from cosmic rays, solar flare event time distrib. 4=17996
current theories 4=10738
distinction from solar and geomagnetic 4=13854
effect on solar wind and magnetosphere energy coupling 4=20858
galactic, rel. to interplanetary H distrib. 4=2412
geomag. field–solar wind interaction, effect 3=25958
investigation via cosmic-ray primaries 4=25220
magnetic fields, derivation from cosmic ray solar flare effects 1=18017
magnetic field, rel. to cis-lunar mag. field 2=19277
magnetic fields rel. to solar plasma clouds 2=16261
meas., space vehicle 4=10769
Pioneer V results, mag. field 4=13976
review of satellite data 4=26925
review of space-probe obs. 4=4882
and sun, activity, Pioneer V meas. 3=16329
and sun electric charge 4=23905
value, Explorer 12 meas., and earth's field boundary 4=7934

Interplanetary matter
(Heading introduced in 1961).
absorbing particles, capture by solar radiation field 3=9188
accretion equation solution, special case 3=18594
antimatter density 2=19276
antimatter proportion, cosmic ray data 3=9163
asteroid Thule, motion 3=1510
asteroids, counts and their reduction 2=13112
charge particle data from Soviet rockets 3=3539
charged particle observations to 100 000 km, by space rocket 2=918
charged particles meas., 187-339 km 3=9119
charged particles, trapped at 3-5 earth radii, rel. to magnetic storms 2=15282
comet envelopes rel. to interaction with particle stream 1=18052
corpuscular velocities in streams, rel. to M-disturbances 2=968
cosmic dust, Mariner II detection 3=9164
cosmic dust, size and mass distrib. 1=18020
cosmic-ray correlation 2=16264
cosmic-ray propagation rel. to geomagnetic storm effect 2=12027
debris, theory of origin 2=6979
dust belt round earth due to lunar ejection 4=15882
dust cloud about earth 1=6643
dust cloud around earth, counterglow origin 2=13117, 17236
dust conc. near earth 2=21690
dust concns. near earth, capture processes 3=3540

Interplanetary matter—contd
- dust distribution meas. by satellite 2=17235
- dust distribution near earth 3=3541
- dust, Explorer I measurements 1=6706
- dust grains. perturbation by solar wind 4=23902
- dust, incident flux 1=18016
- dust particles, light scattering rel. to zodiacal light and F-corona 4=15936
- dust particles, micron-size, rel. to Leonid meteor stream 2=6986
- dust particles in vicinity of earth 2=24085
- dust spherules, distribution in ocean sediments, review 2=17269
- dust, thermal radiation, meas. and model 4=10889
- and E-region irregularities 3= 11437
- earth, dust and gas tail, rel. to gegenshein 2=4731
- earth's dust envelope, distrib. 3=23665
- earth's third radiation belt 2=919
- effect on thermionic emission, electrons 4=5697
- 88-168 km, rocket collected, electron microscope examination 3=18592
- electron conc. meas., satellites application 2=9109
- electron densities rel. to zodiacal light scattering 1=12746
- electron density, radioastronomical study 2=11104
- electron density, from zodiacal light spectrum 3=1509
- enhanced density near earth, origin 3=21089
- escape planetary atmospheres, minor constituents lifetime 1=2600-1
- exospher, outer, magnetic hyperwaves rel. to cosmic rays 2=13053
- exosphere, density distrib. 1=2602
- Fermi acceleration, adiabatic theory review 4=665
- galactic D:H ratio 2=21740
- γ-rays rel. to cosmic-rays and diffus matter 2=5773
- gas, H cloud of terrestrial origin 1=15415
- gas, ionization and expected emission lines 1=5129
- gas, rel. to solar disturbances and galactic mag. field 2=13100
- gaseous, properties 1=5150
- gases, ionization by solar extreme u.v. 1=2598
- general corpuscular field due to sun, existence theory 2=965
- geocoma hypothesis rel. to Lyman-α problem 3=13779
- gravitational conc. of particles near earth 2=24086
- gravitational concn. of particles near earth 3=23666
- information obtained by Mariner II, possibilities 3=11616
- interplanetary, cosmic-ray intensity 0=20295
- interplanetary, coupling with polar regions of earth's ionosphere 0=10410
- interplanetary, em. pulsations, propag. 0=9180
- interplanetary, electron density 0=18615
- interplanetary field, auroral theory 2=15255
- interplanetary magnetic storm, April 5, 1960 1=18019
- interplanetary, model, expansion of solar corona 0=6591
- interplanetary, plasma 0=10487
- interplanetary, rel. to primary cosmic rays 0=10507
- interplanetary, proton and electron densities 0=14395
- interplanetary, solar corona extension into Martian orbit 0=16504
- investigation, using artificial ionized cloud at 30 earth radii 2=4728
- ionized, at four earth radii, rel. to solar corpuscles 2=9070
- ionized gaseous envelope of earth, structure 3=3484
- kinetic and transport props. evaluation 2=21691
- low density gases, dynamical aspects 2=4715
- magnetic storms in interplanetary space 2=4730
- magnetic transients rel. to solar flare incidence 2=24125
- magnetopause, review 4=4958
- magnetosphere, motions, rel. to F-region irregularities 4=17953
- magnetosphere structure, rel. to geomag. pulsations 4=15898
- mass distrib. calc. 4=20914
- measurement, use of rockets and satellites, review 2=8992
- Mercury, erosion, by meteoric impacts 3=16352
- metal sphere, potential calc. 2=11196, 17315
- meteor matter density 2=13117, 17236
- micrometeorite studies by recoverable sounding rocket 2=17264

Interplanetary matter—contd
- micrometeorites, distrib. near earth, satellite data 1=18062-3
- micrometeorites, vel., mass, radiance, charge and flux determ. 4=26931
- model, semiempirical 2=17237
- models, rel. to comet tails 1=11675
- models, optical properties rel. to electron density 2=11105
- neutral hydrogen in model corona 1=5158
- particle flux meas. at 1.9×10^6 km from earth by rocket, rel. to geomag. field 4=7982
- particle size, from wavelength—polariz. depend. 3=7019
- penetration, Explorer XIII and XVI satellites 4=10888
- photometric obs., phase law theory 3=3542
- plasma, rel. to comet tail origin 1=15432
- plasma, conference (Culham Lab., 1963) 4=5589
- plasma, direct observation 2=12055
- plasma flow round earth 3=9287
- plasma, up to four earth radii, rocket observations 2=15301
- plasma investigation instrument 1=15583
- plasma and mag. field, at 22 earth radii 2=17204
- plasma, magnetized, expanding, e.m. props. 2=17238
- plasma meas., by Explorer 10 3=25993
- plasma streams, effect on geomag. field 3=18568
- plasma, for sun 2=15302
- plasma, survey 4=20915
- plasma theory 4=20922
- plasma, zodiacal light study 4=20916
- probe 4=20965
- protoplanetary cloud, solar heated, temperature 2=24084
- satellite and rocket study, review 1=9303
- Saturn's rings, shadow effect, generalization 2=4727
- scattering, light 4=18427
- semiempirical model 3=3538
- small bodies, review of work in USSR 2=21706
- solar radiation pressure, forces and moments 4=2475
- solar wind—magnetosphere interaction 3=9134
- sputtering rates under solar-wind bombardment 3=23667
- study by use of comet tails, validity 3=5247
- study using space vehicles 2=19213
- sunlight scatt. by, counterglow 3=1469
- terrestrial ambium, effect on polar-cap airglow 4=4785
- zodiacal dust cloud, origins 3=18595
- zodiacal light, electron density meas. 4=7981
- Fe_2O_3, accumulation on earth, correl. with meteor showers 3=18593
- H, distrib., rel. to solar wind shock front theory 4=2412
- H near earth, origin of H_α emission 4=17995
- H, neutral, distrib., from Hα emission 3=6992
- H, neutral, to 10 earth radii, current knowledge 4=23773
- H_2 escape in outer planet region 4=7973
- He extreme u.v. radiation 2=4726
- Na cloud expansion 1=18018

Interstellar matter
- absorption of dark nebula, calc. 2=2550
- absorption, effect of absorption lines on photoelectric meas. 0=14440
- absorption effects, rel. to globular cluster colour indices 4=4869
- absorption in neighbourhood of sun 2=13097
- absorption spectrum 4=29419
- absorption three—colour system determ. 4=29418
- absorption, ultraviolet, wavelength var. 4=13909
- acceleration by radiation 4=4879
- accretion equation solution, special case 3=18594
- amplification of microwaves by streaming plasma 1=10716
- antimatter proportion, cosmic ray data 3=9163
- astrophysical co-rotation, laboratory experiment with Hg 2=1575
- in barred spiral galaxies, gas motion 4=10871
- calcium clouds, radial velocities 2=24137
- capture in space around star, by inelastic collisions 2=2524
- centre of Galaxy, expansion of neutral hydrogen 1=18014
- Cepheus, Perseus regions, Cygnus Rift 2=19275
- charged particle accel. by varying mag. fields 4=15909
- cloud complex, rel. to star formation 4=10805
- cloud equilibrium, rel. to Galactic magnetic field 4=10855
- cloud with high conc. of CN molecules 4=29421
- cloud model 0=10476
- cloud near α-Oph 2=15298
- cloud, structure and model 3=16326

Interstellar matter—contd
cloud structure in spiral arms 1=18210
cloud, uniform and non-uniform models 4=29481
clouds, internal motions 4=29420
clouds, ionized, size meas. 0=18614
clouds, 21 cm studies 0=8478
Coma cluster, neutral hydrogen meas. 1=18124
compressed region due to supernova envelope 2=21720
condensation, gravitational, stellar association theory 4=29415
condensation, mass-function in galactic clusters 3=16325
conference, Varenna (1961) 4=20883
cosmic debris, sources, theory 2=6979
cosmic dust in recent deep-sea sediments 0=6582
cosmic-ray diffusion 1=2145
cosmic ray fragmentation, effect of 3=15067
consumption at birth of stars 4=13883
and cosmic rays, primary, effect on very heavy nuclei spectrum 4=15908
degenerate superdense gas of elementary particles, theory 1=19154
density of neutrinos, gravitons, baryons in universe, upper limit 1=18007
density of neutrinos, gravitons, baryons in universe, upper limit 3=1507
density, rel. to rate of star formation 2=15362
density and velocity distribution 0=8470
deuterium, in Galaxy, 327 Mc/s line study 1=18008
diffuse band, 4430 A, photoelec. meas. 3=9161
Dirac monopole, behaviour and rel. to cosmic rays 4=10793
distribution and motion, 21 cm data 4=10922
dust grains, suprathermal particles, effect on size distrib. 3=11508
dust within 20 pc of sun, distrib. 4=10867
in elliptical galaxies, emission lines, interpretation 0=18611
energy balance 4=10870
expansion of clouds, virial theorem appl. 3=18591
extinction and polarization, relation 0=19458
far u.v. spectra, summary 2=17299
filamentary structure, elec. current origin 2=1415
filaments, formation 0=18821
formation of stellar associations from galactic gas 0=825
galactic central layer, gravitational resonance effects 4=10848
galactic gas exchange between nucleus and corona 2=2551
Galactic halo, free–free emission, 100 Mc/s optical depth 1=18186
galactical distribution of relativistic electrons 0=831
Galactic gas, magnetic fields and dynamics 4=13898
Galactic plane, disk—halo transition region, composition 4=10849
in galaxies, conference, Princeton (1961) 4=7959
Galaxy, H II regions 1=18185
$\gamma + \gamma \to \nu + \bar{\nu}$ process calc. 4=25060
gamma-ray sources >0.2 MeV in galaxy 4=2383
gas cloud, expanding, 21 cm absorption profiles 4=23885
gas clouds at intermediate latitudes, radio data 4=10921
gas in galactic clusters 4=10857
gas and galactic halo 4=26885
gas clouds, self-gravitating, fragmentation 3=11498
gas, heating, by cosmic rays, induction mechanism 3=23664
gas macro-circulation in large-scale magnetic field 1=9250
globular clusters, possible existence 0=18814
globular clusters, search for neutral H 0=10484

inert gases, sputtering of Cu_3Au and Ag—Pd 0=12645
instabilities in plasma-beam system in mag. field 3=7625

Ion beams—contd
instability in electron plasma 2=11649
intensification, by plasma—mag. field interaction 1=11980
intensity, posn. meas. with signal electrodes 3=5726
interaction of electron—ion beam with plasma 3=24284
interaction with hypersonic beam of atoms or mols. 1=19679
interaction with plasma 3=21792
interaction with plasmas, instabilities 2=11647
interaction with plasma, in mag. field. electrostatic instabilities 2=17826
interaction with plasma in r.f. cavity, potential distrib. meas. 1=5472
interactions, with plasma oscillations, instability 2=201
interactions, with plasma oscillations, instability 3=4171
interpenetration, double steam amplification, theory 0=9199
ion and plasma accelerators, comparison 0=12615
isotope separation, two-directional continuous scanning 0=19796
isotope separator beams of different charge states 3=14669
kinetic energy of atoms ejected from metals 2=17902
klystron, positive ion, 5Mc/s 3=9876
long-wavelength instability 1=301
in mag. field, in rarified gas, space-charge oscillations 0=10976
magnet optimization, computer programme 3=16986
in magnetic channel, transfer matrix 3=14670
mass and energy losses in a medium, macroscopic renormalization 3=5715
mass spectrometers, charge-exchange phenomena 2=5390
mass spectrum of beam from Cockcroft-Walton accelerator 0=19829
mean energy meas., optical method 3=24384
measurement, by elastic waves prod. in solids 3=18889
measurement, sensitive device with small rise time 2=7529
medical appls. of high energy heavy particle beams 4=7995
metal surfaces, bombardment as means of cleaning 0=8726
microanalysis by secondary emission 3=3422
use in micro-colour recording, etching and machining 4=29998
micrographic samples, preparation 1=20718
modulated, injection into plasma, in homog. mag. field energy losses 0=15011
modulation due to h.f. source 0=19773
monochromatization, by electrostatic analyser 0=1406
motion of charged particles and disks through electron—ion beam 1=4658
movement of particles, computer calc. 2=19881
multiatomic, charge/mass ratio 0.1 to 10^7 C kg^{-1}, production and mass spectrometry 4=19116
multicharged ions, ranges and specific energy losses in solids and gases 2=7674
multiply-charged, accelerated in cyclotron of 120 cm polar diameter 2=7687
neutralization by electron injection 3=12128
neutralization, fast positive ions on metal surface 0=19808
neutralization by injection of electrons 1=18776-7
neutralization, plasma oscillations 2=20005
neutralization, resonsance, in monatomic gases 0=7703
noble gases, collection, sputtering expts. 2=3095
noble gases, effect on W surface 1=20690
noble gases, electron ejection from BaO 2=9626
normal beam, linear focusing, differential equation 2=9644
oxidation of Ni films 0=10988
particle beam, charged, interact. with plasma 3=5687
particle beam, charged, interaction with plasma 2=17856
particle distrib. in beam storage systems 3=12255
particulate beams, production 4=29986
p, π, cross-section display at high energy 4=21601
penetration of transverse magnetic fields by protons, rel. to electron neutralization 4=19130
plasma beam, quasi-thermalization 1=5502
plasma—beam system, magnetodynamic instab. 3=21834
in plasma, distrib. function anisotropy effects 2=11648
plasma, in mag. field, radiation emission 2=5388
plasma, magnetoacoustic, wave excitation 2=9574
in plasma, non-uniform, edge instability 4=24699

Ion beams—contd
plasma potential measurement 2=9595
plasma, time-depend. energy loss, theory 4=11584
plasma wave dispersion equation for exospheric corpuscular stream 2=884
in plasma, wave excitation 2=19960
plasmas, two-stream instability in finite beams 2=5358
position and current meas. 4=16572
positive ion attack of glass surface 2=4487
positive-ion beam in neutral gas, multiple charge exchange 3=21716
positive ion detector for meas. of two beams 4=3053
positive ions, millimictosecond pulsing 2=5402
production in high-density ion guns, simulator 1=4660
production of neg. beams using noble gas ions 3=9872
production, positive high-intensity low-divergence beams 4=21581
profile equation solution 4=21584
profile, with linear focusing and space-charge effects 3=12254
proton multiple beam source 1=3021
proton synchrotron beam intensity meas. 4=14816
proton synchrotron beam, position determ. 4=14817
proton synchrotron beam, radial and phase position control 4=14811
protons, extraction from Birmingham synchrotron 1=1945
protons, 4 MeV, charge exchange in nitrogen 2=7567
pulsation device, rapid, at low energies 1=16434
pulsation, in electrostatic accelerator 2=5396
pulsation by h.f. field 2=221
pulse production, n sec range, by modulation 2=7672
pulsed currents, noninterrupting meas. method 4=3054
r.f. sources, energy anomalies 2=17897
range, heavy ions of moderate vel., quasi-elastic collision theory 4=25438
relativistic beam—plasma config., instabilities 4=5677
relativistic, passing through plasma, kinetic theory 4=5597
relativistic, passing through plasma, small amplitude motion 0=17003-4
relativistic, ribbon, formation, shaping electrodes 3=12246
short burst production, theory 1=1925
simulation of synchrocyclotron beam by light modulator 1=13224
soace charge, 3--dimensional flow 0=15065
sorption in presence of sputtering 2=7677
space charge law, verification 2=3087
space-charge neutralization 2=224
space-charge waves, propagation along drifting multi-velocity beam in mag. field 4=29985
sputtering of Ag by light ions 0=10989
sputtering of metals, emitted atom velocity 2=9649
stability in Biot—Savart field 1=5501
stability in e.m. isotope separators 0=19782
supersonic annular nozzle as differential barrier 4=24280
surface analysis by secondary ion emission on bombardment 1=3020
translation system, achromatics 4=19129
transport systems, symmetry props. 3=24381
two-beam instability, review 4=590
velocity analyser, 75 kV 2=1513
velocity spread, resolution of r.f. mass spectrometer 1=335
Zeta D plasma trace-ion energies, spectroscopic studies 4=8700
A, bombard, of Al, Au, corundum and Zn, surface etching 0=8173
A, detection and velocity meas. 2=12355
A, effects on Si point-contact diodes 0=15973
A, glass bomb., secondary electron emission 0=10939
A, prep. of Si thin single-crystal films, bombardment 2=841
A, sputtering of Cu and Ni single crystals 1=10745
A, sputtering of Cu and Ni single crystals 1=11985
A, Ag irradiation, surface structure 0=4311
A, Au bombard. secondary electron emission 0=19731
A, Ge and Si etching 0=1898
A, Na films bombard. secondary electron emission 0=19728
A^+, bombard. of Cu, sputtering ratios 0=9110
A^+, bombard. glass, electron emission 1=1909
A^+, bombard. glass, electron emission 1=4638

Ion beams—contd
A^+, electron emission from W 1=16391
A^+ ion sputtering yields of metals, 50-600 eV 1=4669
A^+ low energy bombardment of Au 1=14346
A^+, for metal bombardment 2=1494
A^+, sputtering of Cr 0=12653
A^+, $^{2+}$, 10 to 100 keV detection by nuclear track plates 2=20052
A^+, AgCl bombard., catalytic activity 0=4709
Ar^+, detection, emulsion, up to 25 keV 4=9037
Ar ions, reflection from Cu single crystal, anisotropy 4=29993
Ar, metallographic etching, 1 keV 3=20976
Ag, bombardment by ions, atomic collision sequences 1=14157
Au, bombardment by ions, atomic collision sequences 1=14157
C deposition, thin film preparation 1=1449
C^{12}, interactions, resonance structure of $C^{12} + C^{12}$ reaction 2=5401
C^{12}, prod. of CsI:Tl fluorescence 0=664
Ca^+, electron emission from W 1=16391
Cs, imaging methods 4=27583
Cs ion "engine" with 0. 5 g thrust 0=12644
Cs in plasma, rel. to oscillation excitation 2=17854
Cs, in plasma, rel. to oscillation excitation 3=5686
Cs^+ collisionless plasma stream in transverse mag. field 4=24708
Cs^+—Cs atom charge transfer, 50-4000 eV meas. 3=5629
$Cs^{134,137}$, keV energies, range in Ge 2=22276
Cs^{137}, range in Al 0=19804
Cu, bombardment by ions, atomic collision sequences 1=14157
Cu, high-energy sputtering, surface study 2=1523
D^-, 20 MeV, electron detachment from in gases 4=18676
D, fast ions, interaction with metals 0=19807
D^+, bombard. of Cu, sputtering ratios 0=9110
Ge bombarded, edge dislocation detection 2=6345
Ge surface states after bombardment 2=3894
Ge^+, h.f. source 3=24380
H^-, and deuterium 0=17047
H^-, from duo-plasmatron, 70 μA at 20 keV 3=9870
H^- polarized, production 4=24751
H^-, production 4=29987
H, effect on elec. resistance of Al_2O_3 and MgO 0=20865
H, r.f. source, characteristics 2=223
H, space-charge expansion from duoplasmatron source 2=11723
H, space-charge neutralization 2=224
H, sputtering of Cu 2=7676
H, from 2 MeV accelerator, H^+–H_2^+–H_3^+ content 2=11731
H, in H_2, light emission 0=20646
H^+, bombard. of Cu, sputtering ratios 0=9110
H^+, 200 keV, light emission on bombardment of Ni 2=3970
H^+ and H_2^+, en W, prod. of H^- 0=8986
H^+, H_2^+, D_2^+, detection, emulsion, up to 25 keV 4=9037
H^+, H_2^+, H_3^+, bombard. glass, electron emission 1=1909
H^+, H_2^+, H_3^+, bombard. glass, electron emission 1=4638
H^+, H_2^+ + H_3^+ ionization and excitation of N_2 1=2311
H_2 , duoplasmatron source with gas charge exchange 3=7650
H_2, dissociation, energy spreads 4=12542
H_2^+, charge-exchange and dissociation, in different gases 3=7445
H_2^+, effect on N ions and neutral N_2 2=13532
H_2^+, injection and accumulation in mag. mirror system 4=541
H_2^+, passage through H_2 and He 1=14111
He^-, duoplasmatron source with gas charge exchange 3=7650
He^-, production 4=29987
He, energy loss in metal foils 0=3814
He, glass bomb., secondary electron emission 0=10939
He injection into tandem accelerator 1=9645
He^+, Auger electron ejection from Ge, adsorption effects 1=10737
He^+, bombard. of Cu, sputtering ratios 0=9110
He^+, bombard. glass, electron emission 1=1909
He^+, bombard. glass, electron emission 1=4638
He^+, electron emission from W 1=16391
$He^{+,2+}$, 10 to 100 keV, detection by nuclear track plates 2=20052

Ion beams—contd
- Hg, 5 kV, from Kaufman-type source, neutralization by electron injection 4=19117
- Hg ion sputtering of metals, at 4-15 keV energy 1=7109
- Hg^+, sputtering of Cr 0=12653
- Hg^+, in sputtering of Mo, Fe, Ni and Pt, ang. distrib. 0=1174
- Hg^+, sputtering yields of var. metals, angle of incid. depend. 0=1173
- K, intensity modulated, secondary emission from Mo, Ta, W 0=15059
- K^+, crossing K beam, resonance charge transfer 1=278
- Kr, charge distrib. after passage through various gases 1=18940
- Kr, multiply-charged, intensity and distrib. 3=14669
- Li, charge exchange, ionization and electron loss cross-sections in H_2 and He 1=10675
- Li, luminescence of $CaSiO_3$ on bombardment 2=724
- Li, positive, ionization of 8 gases 1=4565
- Li, 3-10 keV, charge transfer in thin foils 2=13544
- Li^+, secondary electron aided source 0=7169
- Li^+, 10-475 keV, charge-changing collisions in H_2, He, N_2 0=19625
- $Li^{6,7}$, 1.1–2.2 MeV, Coulomb excitation of F^{19}, Mn^{55} and Ti^{47} 0=4107
- N, effects of bombardment of Pt films 2=18622
- N, energy loss in metals 0=3814
- N on Ge, rel. to exo-electron emission 1=16358
- N, ionization of A 2=11617
- N, Au bombard., secondary electron emission 0=19731
- N, on W–Ge and W–Si contacts, V–I curves 1=17771
- N^{14}, interactions with various targets 2=5401
- N^{14}, prod. of CsI:Tl fluorescence 0=664
- $N^{+,2+}$, 10 to 100 keV, detection by nuclear track plates 2=20052
- N^+ and N^+_2, electron emission from W 1=16391
- $N^{3+;4+}$, Coulomb excitation of various nuclei 1=2243
- Na^{24}, range in Al 0=19804
- Ne^+, Auger electron ejection from Ge, adsorption effects 1=10737
- Ne^+, electron emission from W 1=16391
- Ne^+ ion sputtering yields of metals, 50-600 eV 1=4669
- Ne^{4+}, Coulomb excitation of various nuclei 1=2243
- O, ionization of A 2=11617
- O, on W–Ge and W–Si contacts, V–I curves 1=17771
- O^{4+}, Coulomb excitation of various nuclei 1=2243
- O^{16}, interactions with various targets 2=5401
- O^{16}, prod. of CsI, Tl fluorescence 0=664
- Rb^{86}, range in Al 0=19804
- Si^+, h.f. source 3=24380
- T, for plasma density meas. 4=2990
- W range, anomalous penetrating tail, heavy ions 4=19119
- Xe, multiply-charged, intensity and distrib. 3=14669
- **effects**
  - (subheading introduced in 1963).
  - alkali metal ions, backscattering from metal surfaces rel. to temp. 4=8854
  - α-brass films, etching, electron micr. study 3=18241
  - amplification of spin waves in ferromagnetics 4=28792
  - atomic particles and solids, interactions 3=5713
  - bombarding light targets, ang. distrib. of scattered secondary ions 4=8856
  - charge exchange with neutral gas molecules jet 3=24223
  - crystal interstitial prod. at low energies 4=6833
  - crystal lattice, open channels penetration 4=4086
  - dE/dR meas. in gases with low energy heavy particles 4=27578
  - diffraction grating, scale, gauze prod., with chemical process 4=14387
  - effects, Al, defect clusters 2=18565
  - effects, Ag single crystals, disorientation 1=17591
  - effects on Au films 2=23150
  - effects on Au, Pt, lattice defects 2=23170
  - effects, Bi_2Te_3 surface cleaning 0=14047
  - effects, Cu, impurity prod. and removal 2=18576
  - effects, elec. charge on nonconducting targets, meas. 2=15967
  - effects, electron emission from metals, theory 2=1491, 7655
  - effects, high-energy, on metal surfaces 2=1523
  - effects, on metals, sputtering yields, energy depend. 0=12653

Ion beams—contd
- **effects**—contd
  - effects on oxide cathodes, electron emission 0=10938
  - effects, quartz and vitreous silica, surface refractive index changes 0=13569
  - effects, Si particle detectors production 2=16096
  - effects on solid surfaces, conference 2=10423
  - effects, synthetic fibres, etching 0=17052
  - elastic waves, generation, in solids, pulsed, for energy exchange and beam study 3=18889
  - electromagnetic oscills., on interaction with plasma, neutral beam 4=11665
  - electron microscope, secondary emission, contamination removal 3=9864
  - etching effects, on polyethylene fibres 3=23497
  - exo-electron emission, as detection method 3=12229
  - force on bombarded surface, microbalance meas. 3=23829
  - gases, secondary processes by slow ions 4=2939
  - gold, spike regions, form. by A^+ and Xe^+ 3=6552
  - inert-gas, bombard. metal surfaces, energy transfer 3=22511
  - inert gas ions, 100-30 000 eV, bombard, of Cu, Au, graphite, secondary emission, positive 3=14665
  - inert gas ions, reflection by solid surfaces 4=604
  - inert gases, induced emission of sorbed gas from glass surfaces 4=23593
  - ion—solid interaction, low energy, Auger-type 4=19093
  - luminescence excitatn., damage 3=970
  - metals, electron emission, due to rare gas ions 3=9843
  - metals, f.c.c. and b.c.c., orientation from ejection patterns 4=23303
  - metals, neg. ion emission due to Cs positive ions 3=4205
  - metals, optical properties 4=20472
  - metals, secondary electron emission due to H, He^+ 3=7638
  - microparticle charging for accel. system 4=3062
  - molecules, ionization, in MeV range 3=20024
  - monocrystals, cathode disintegration anisotropy and focused collisions 3=7658
  - photographic plate blackening 4=24401
  - plasma 3=21769
  - plasma excitation, ion velocity effect 4=3002
  - plasma, along mag. field, unstable transverse propagation 4=553
  - plasma, energy loss 4=27508
  - in plasma, interaction and thermalization 4=11642
  - plasma interaction, e.m. osc., neutral beam 4=11665
  - plasma oscs. 4=19010
  - quartz, stress relaxation 4=15507
  - range in solid from sputtering yield 3=5721
  - secondary effects, mass-spectrometric studies 0=19809
  - secondary electron emission distribution function, by positive ions on metal surfaces 3=12239
  - secondary electron emission from metals 4=8824
  - secondary electron emission, meas. of coeff. 4=3036
  - secondary electron emission, mechanism 0=19805
  - secondary electron emission, from W and Ta 0=19806
  - secondary electron yield, meas. 3=14679
  - secondary emission, in presence of theormionic emission 0=7167
  - secondary emission of electrons from Cu 2=11704
  - secondary emission from metals, rel. to ion mass 4=8825
  - secondary processes in gases, review 2=15881
  - shock waves, production of nuclear fusion temps. 4=18328
  - u.v. radiation from Ag, Al, Cu, W, on H ion impact 4=20487
  - vitreous silica, stress relaxation 4=15507
  - Ag films, etching, electron micr. study 3=18241
  - Al, bomb. with Ar ions 3=10706
  - Al, crystal point defect clusters, obs. by electron microscopy 3=20159
  - Al films, etching, electron micr. study 3=18241
  - Al monocrystal, atomic ejection sequences by Ar^+ bombardment, 50 keV 3=2845
  - Al, spike formation on surface by Ar ions 3=22880
  - Al, surface, Zr bombard. at ~ 10 keV 3=4219
  - Al, u.v. spectrum on K^+, H ion bombardment 4=22913
  - Ar, bombard. metals, secondary electron emission 4=8822
  - Ar collisions with gas atoms, diff. scatt. cross-sect. and charge state distrib. 4=25593
  - Ar-ions on Ag crystals, surface optical props. 3=20435
  - Ar, total ionization, by 8-100 keV beams 4=21459

Ion beams—contd
effects—contd
ArII excitation by He$^+$ and H$^+$ 3=12770
Ar$^+$, atomic scattering from metal surfaces, 40 to 80 keV 4=19121
Ar$^+$, on Cu, secondary atom emission, 15 keV 4=17457
Ar$^+$ on metal surfaces, rel. to secondary electron emission 4=11700
Ar$^+$, 1-10 keV, sputtering yields of single crystals 4=4103
Ar$^+$, sputtering of Cu (100) surface 3=10703
Au, dislocation generation at 100 eV 3=17723
Au films, crystal interstitial prod. at low energies 4=6833
Au films, damage by inert gas ions 3=10707
Au films, dislocation loops and Ar bubbles 4=1489
Bi, films, on Bi cleavage faces, crystal plane orientation 3=16136
C, on Tl, Pb, Bi, α-activities 3=12644
C^{12} on graphite single crystals, defect obs. 4=28444
on C$_3$H$_8$, atomic and molec. ions 3=10549
Ca bombard. metals, secondary electron emission 4=8822
CaO, due to Hg, paramagnetic defect centres 4=7320
CdS, surface effects study 3=8924
Cs, bombard. metals, secondary electron emission 4=8822
Cs$^+$ bombard. Mo and Ni targets, ang. distrib. of scattered secondary ions 4=8856
CsCl, secondary emission, by K ions 3=16978
Cs and Rb with Mo surface 3=5714
Cu, dislocation generation at 100 eV 3=17723
Cu, electron emission, secondary, ang. var. 4=21565
Cu, electron emission, secondary, var. Ar$^+$ ion beam angles 4=14754
Cu, in electron microscope below 30°K, vacancies and loops 4=6897
Cu films, crystal interstitial prod. at low energies 4=6833
Cu, 50 keV, open channels penetration 4=4086
Cu, luminescence, resonance, ang. var. mechanism 4=13071
Cu, preferential atomic ejection directions, bombarded by Ar$^+$ ions, 40 keV 4=4095
Cu, reflection and secondary electron emission 4=27565
Cu single crystal, sputtering ratio and ion-electron emission coeff. anisotropy 4=25983
Cu, surface, Sn, Zr and Mg bombard. at ~10 keV 3=4219
Cu surface structure after bombardment 4=13671
Cu—Be, secondary electron yield under $H^{0,+}_{1,2,3}$ 4=8828
Ge, doping and radiation damage centres, prod. 4=28558
Ge, electron excitation into cond. band 3=858
Ge, electron excitation into cond. band. 3=6588
H$^-$ formation, by H$_1^+$, H$_2^+$, H$_3^+$ ions, in H$_2$O or Hg vapour streams, 5-30 keV 4=450
H, H$_2$ and H$_3$ ions, bombard. metals, secondary electron emission 4=8822
H, sputtering of Cu 3=4218
H$^+$, electron capture into excited state in H$_2$, Ne, He or Kr 4=11527
H$^+$, H$_2^+$ and H$_3^+$ incident on H$_2$ 3=15390
H$_1^+$, H$_2^+$, H$_3^+$ in H, electron ionization and capture 4=21461
H$_2$ collisions with H$_2^+$ and H$_3^+$, Balmer emissions meas. 3=25043
H$_2$, energy transfer from fast H$_2^+$ and H$_3^+$, meas. 4=11514
H$_2^+$, 750 keV, energy transfer to give neutral beam of quantum levels > 7 4=11515
H$_2^+$ and H$_3^+$, charge exchange, H atom beam formation 4=11526
H$_2^+$ and H$_3^+$, in He—Ne, Balmer line excit. in H 4=9656
He penetration depth in LiF films 4=8855
He$^+$, He$^-$ ion formation in He 4=19114
He, He$^+$, Ne$^+$, Ar$^+$ beam losses due to ionization 4=24594
K, bombard. metals, secondary electron emission 4=8822
KBr, secondary emission, by K ions 3=16978
Kr penetration into Mo in glow discharge 4=27581
KrII excitation by He$^+$ and H$^+$ 3=12770
Kr^{85}, in Al channelling events 3=15521
Li, bombard. metals, secondary electron emission 4=8822
Li$^+$, for continuous potential meas. in plasma 4=16485
Li$^+$, energy loss processes in rare gases 3=19186

Ion beams—contd
effects—contd
Li^{7+} interference in gases 3=21901
LiF, secondary emission, by K ions 3=16978
Mo, damage due to H$^+$ and He^{2+} 3=2850
Mo, electron emission due to He$^+$ and Ar$^+$ 3=4185
Mo metal, scatt. process of Rb$^+$ and Cs$^+$ 3=22854
Mo, reflection and electron ejection, comparison of K$^+$, Na$^+$ and inert gas ions and atoms 4=5719
N$^+$, collisions due to N$_2^{2+}$ content 3=21719
N and N$_2$ bombard. metals, secondary electron emission 4=8822
N$_2$, energy loss of He$^+$ per ion pair 3=12081
N^{14} and Ne^{20}, Coulomb excitation of nuclei 3=10237
Na$^+$ bombard. NaCl, secondary electron emission, depth of emergence 4=8821
Na$^+$, energy loss processes in rare gases 3=19186
NaCl, secondary emission, by K ions 3=16978
NaF, secondary emission, by K ions 3=16978
Ne, bombard. metals, secondary electron emission 4=8822
Ne, He$^+$, Ne$^+$, Ar$^+$ beam losses due to ionization 4=24594
NeI excitation by H$^+$ and He$^+$ 3=12770
Ni, dislocation generation at 100 eV 3=17723
Ni, electron emission, secondary, var. mass number 4=24736
Ni films, crystal interstitial prod. at low energies 4=6833
Ni, u.v. and visible radiation, by H ion bombardment, 200 keV 3=7657
PbS, photoelectricity, conductivity 4=4162
Rb$^+$ bombard. Mo and Ni targets, ang. distrib. of scattered secondary ions 4=8856
Rn^{222}, 70-210 keV, α-emission 3=14677
Rn^{222} and Xe^{133} labels in crystals, release 3=823
Sb, films, on Sb cleavage faces, crystal plane orientation 3=16136
Si, doping and radiation damage centres, prod. 4=28558
Si, 100 kV, H$^+$ and He ion bomb. effects 3=10708
Si, secondary emission, by K ions 3=16978
UO$_2$, focussed collision sequences, by 50 keV Xe$^+$ 4=6902
W, Auger electron emission 4=3039
W, kinetic electron emission due to 1-21 keV Cs 4=19095
W, photon emission, He, Ne ions, 25-100 eV 3=21900
W, secondary electron emission due to He$^+$ 3=4182
W, spike formation on surface by Ar ions 3=22880
Xe$^+$ on amorphous Ge, displacement spike recrystn. 4=17461
Zn, etching dislocations 4=1477

Ionization—contd
molecular, probability by energy transfer from inert gas atom 3=2675
molecule—electron collisions, inelastic, review 4=25760
molecules in comets, factors 4=4889
molecules, cross-section, due to electron impact 1=14127
molecules, by elec. fields, dissociation model 4=15386
molecules, electron impact, diabatic effect calc. 4=12439
molecules, electron impact, rel. to isotopic labelling and structure 4=454
molecules, by electrons, mass-spectra cross-section meas. 4=2941
molecules, in MeV range 3=20024
molecules, rel. to polariz. and radical deform. energy 3=8303
monatomic, at high densities, eqns-of state 4=13881
moving particles, losses due to ionization 0=20073
multistage, with recomb., theory 3=7432
naphthacene, ionization—dissociation processes caused by electron impact 4=28248
naphthaphene, ionization—dissociation processes caused by electron impact 4=28248
negative beam prod. using noble gas ions 3=9872
nuclear particle discrimination by ionization losses in scintillation counter telescope 4=16731
organic molecules by high-energy electrons 2=2999
n-paraffins, fragmentation model 3=16903
photo-ionization cross-sections for atoms 0=19609
photo-ionization cross-section calc., Al and Ga atoms 0=15654
photo, light source, capillary discharge 4=18719
photo, mass spectrometer meas. 4=24758
photoionization, absorption cross-section 3=9722
photoionization, atmosphere, F region heating 1=20987
photo-ionization and electron capture processes in solution 3=16180
polyatomic molecules, states, rel. to electron impact 1=14126
by protons, relative ionization near end of their range 0=20141
π-mesons, ionization–momentum relation, in relativistic region 4=864
methyl derivatives of benzene, photoionization 2=9527
propane, dissociative charge exchange with rare-gas ions 4=3920
protons, ionization-momentum relation, in relativistic region 4=864
pyrene, ionization—dissociation processes caused by electron impact 4=28248
r.f. emission due to electrical breakdown near ionizing particle track 4=681
relativistic increase, possible enhancement 1=8441
spectra prod. by laser 4=16239
stability of ionization fronts 2=4724
stellar atmospheres, effect of C abundance 1=18114
total specific ionization 1=5423
triphenylene, ionization—dissociation processes caused by electron impact 4=28248
vertical ionization transport 1=20965
X-ray, electron spectroscopy for chemical analysis 4=23694
X-ray emission, Kα, from radioactive sources 4=9665
Al, inner shell, to Al^{3+}, Hartree—Fock eqns. 4=6466
Ar atom, autoionized energy levels, meas. and theory 4=6474
Ar atomic collisions, characteristic energy losses 4=12399
Ar, charge exchange, two-electron, with protons 4=464
Ar, by He atoms and ions, 15-180 keV 4=2944
Ar, inner atomic shells, by X-rays 3=25058
Ar^{40}, charge distrib. at high velocities in matter 3=7447
Au, L-Auger, fluoresc. and Coster—Kronig yields 4=1227
BaO, desorption from W by elec. field 4=7722
Be^+ autoionization probability 2=152
C, photoionization of lower excited states 3=25048
C^-, photodetachment cross-section up to 3eV 4=12387
C I, photoionization cross-section 4=18677
C^{12}, charge distrib at high velocities in matter 3=7447
$C_8F_{16}O$, electron attachment in mass spectrometer 0=5273
CH radical, effect on electronic structure 1=7477
CH_2, potential, vacuum u.v. spectra investigation 2=548

Ionization—contd
CH_3I^{125} and $C_2H_5I^{125}$ decay, formation of fragment ions 3=18459
Ca, single and double, by electron impact, power law 4=8617
CdSe, photoionization in fundamental absorpt. region 4=26143
D and D^- beams, 20 MeV, by collisions in gases 4=18676
D^-, 20 MeV, electron detachment by mag. field 3=24213
Fe XIV by electron impact, Bethe approx. 4=8621
H atom, two-photon, metastable 25 state 4=22318
H atom, excited, by electron impact, calc. 4=12392
H atom, n*l* state, by light and electron impact 4=12388
H atoms, close coupling wave functions 4=24579
H atoms, by electrons, with distortion of incident and outgoing waves 4=24578
H atoms by electrons, incident s-wave distortion 3=10466
H atoms, excited, by strong elec. fields, meas. 4=11530
H, atoms, highly-excited, by electron impact 4=24580
H—electron colls., rel. to interference 3=4018
H-electron collisions, rel. to interference 2=5303
H, electron impact, accuracy of classical calcs. 4=28141
H, electron impact, exact classical calc. 4=28146
H^-, by e, cross-section, calc 3=14521
H^- photodetachment, empirical analysis 3=19180
H—p scattering, rearrangement collisions 3=4722
$H^+ + H(1s)$ electron capture, exact resonance, asympt. form of impulse approx. 4=27487
$H^+ + H(1s) \rightarrow H(n^7 m) + H^+$, calc., no need for p—p interaction 4=27475
$H^+ + H\ (1s) \rightarrow H\ (1s) + H^+$, exact resonance, asymptotic form of impulse approx. 4=18691
$H^+ + H\ (1s) \rightarrow H(1s) + H^+$, first Born and distorted wave approx. 4=18690
$H^+ + H(1s) \rightarrow H(2s \text{ or } 2p) + H^+$, theory 3=9732
H^+—H collisions, electron capture theory 4=12405
$H^+ + He(1s^2) \rightarrow H(1s) + He^+$, charge exchange cross-section 4=27474
$H^+ + He\ (1s^2) \rightarrow H\ (1s) + He^+\ (1s)$, first Born and distorted wave approx. 4=18690
H_2, charge exchange, two-electron, with protons 4=464
H_2, dissociative, proton ang. and energy distrib. 4=6656
H_2, dissociative, at 6-120 keV onto H_2 gas 4=20114
H_2, by He atoms and ions, 15-180 keV 4=2944
H_2^+, occurrence in field ionization of H 3=4019
HO_2, potential calc. 2=15131
H_2O_2, by electron impact 2=13537
He atom, autoionization meas. near 200 A 4=12355
He beam, effective charge through Cd metal and gas 4=1231
He, by He atoms and ions, 15-190 keV 4=2944
$He(1s^2)$, electron capture by protons 3=15304
He^- ions, auto-ionization by spin—spin interaction 1=13928
He^+ scatt. on He, resonant electron capture, 0.4-25.0 keV 4=5563
He^+ scatt. on He, resonant electron capture, data analysis 4=5564
$He^{2+} + H(1s) \rightarrow He^+(2s \text{ or } 2p) + H^+$, theory 3=9732
Hg atoms, K-shell, by fast electrons 1=2302
Kr atom, autoionized energy levels, meas. and theory 4=6474
Kr, charge exchange, two-electron, with protons 4=464
Li atoms, auto-ionization by spin—spin interaction 1=13928
Li atoms in H_2 and He, ionization cross-sections 1=10675
Li by electrons 4=24585
Li, metastable states, autoionization 4=25538
Li, photoionization cross-section, 2300-1450 A 3=4016
Li, due to recoil in He^6 decay 4=17087
Li^+ ions, photoionization cross-section calc. 2=13541
Li^+ ions, photoionization cross-section calc. 3=5621
N atom, electron capture by protons 3=15303
N, atomic, electron-impact 2=22174
N, photoionization of lower excited states 3=25048
N_2, by He atoms and ions, 15-180 keV 4=2944
N^{14}, charge distrib. at high velocities in matter 3=7447
N^{n+}—H_2 collisions (n=0-3), charge exchange meas. 4=8628
$(N^{14}\ N^{15})^{2+}$, potential 4=2945
N_2—N_2 collisions, 20-1000 eV meas. 3=4015
Na, from β-decay of Ne^{23}, electron shake-off 3=15141
Na, photo, >160A, calc. 4=27493
Nd atom, ionization potential 4=6480
Ne^+ to Ne^{2+} by electron impact 3=21703

Ionization—contd

- Ne^{n+}—Xe and Xe^{n+}—Ne collisions 3=2583
- Ne^{2+}–Xe and Xe^{r+}–Ne collisions 2=3718
- Ne^{20}, charge distrib. at high velocities in matter 3=7447
- Ne, by X-rays, 80-600A, cross-section meas. 4=12390
- Ne atom, K-shell, by X-rays, readjustment processes 4=9653
- Ni atoms, K-shell, by fast electrons 1=2302
- O atom, electron capture by protons 3=15303
- O, de-ionization cross-section 1=12245
- O$_2$ and O atoms, excited, in electron collisions, meas. 4=11537
- O^{4+}, by electron impact, cross-section 3=5619
- O^{5+}, by electron impact, cross-section 3=5619
- O^{16}, charge distrib. at high velocities in matter 3=7447
- O$_2$—O$_2$ collisions, 20-1000 eV meas. 3=4015
- (O^{16} O^{17})$^{2+}$, potential 4=2945
- P^{32}, on β decay 3=10286
- Pu^{239,241} II and nucleus, mag. moment 3=17392

    - dielectrics, fountain near a charged point, mechanism 1=16239-40
    - formic acid, field, at metal surfaces 4=456
    - fracture under stress due to ionizing particles 2=2699
    - n-hexane, under γ-irrad., rel. to elec. cond. 3=11804
    - hydrocarbons, saturated, current rel. to irradiation 4=27186
    - isobutylene, photoionization 4=27189
    - isopentane, photoionization 4=27189
    - methyl-2-pentene-1, 4=27189
    - n-heptane, energy loss per pair, average 4=24252
    - n-hexane, energy loss per pair, average 4=24252
    - hydrocarbon liquids, saturated, ion mobilities 2=13545
    - organic cpds., various solvents, n.m.r. study 2=1168
    - optical erosion of condensed matter, review 4=17455
    - organic, strongly polar, de-ionization 4=23663
    - paraffin oils, various viscosities, ion mobility meas. 4=27190
    - photo-ionization potentials, electrostatic det. 2=22180
    - Poisson—Boltzmann eqn. numerical soln. 0=3315
    - propane, photoionization 4=27189
    - rare earth ion mixtures electrolytic separation 4=20835
    - 2.2.4-trimethylpentane, energy loss per pair, average 4=24252

Ionization—contd
- **liquids**—contd
  - water, electron irrad., ion distrib. 3=14532
  - water, product change at high pressures 4=10646
  - A, electron mobility 0=8993
  - H_2, recombination and mobility 3=16911
  - H_2O solns., by gamma rays, H_2^+, H_2O^- struct. and stability 4=10651
  - He, by α-particles, ion drift velocity, superfluidity study 0=14913
  - He, positive and negative, mobility meas. 4=14491
  - He II, var. temp. and field 4=14500
  - SiO_2, low-energy process in defect production 2=12478
- **solids**
  - alkali halide crystals 0=7892
  - alkali halides, multiple, in F-centre formation 2=18617
  - alkali halides, by X-rays, in defect formation 2=12418
  - anthracene, exciton, single-state, spontaneous rate 4=15463
  - centres, by electron impact, theory 3=8502
  - covalent crystals, impurity centres, ionization energy, temp. depend. 0=15864
  - cylinder, by monoenerg. electrons, distribution 3=20256
  - d.c. spark, disjunctive, for mass spectroscopy 4=618
  - degree of, in crystal lattice, electric transfer study 2=6246
  - 1, b-diaminopyrene solid complexes, ionic components 4=13062
  - diamond, by electron bombard., conduction pulse counting 0=9925
  - dielectric films, avalanche theory of breakdown 4=12959
  - dielectrics, study by analogue method 3=1939
  - electron beam energy losses in 32 cpds. 3=2780
  - electron impact ionization of semiconductors 1=14400
  - F-centre, excited, Schottky ionization and tunnelling 4=12808
  - F'-centres, photoionization theory 3=20243
  - films, very thin, by 1 MeV electrons 2=2076
  - fission fragment stopping, inner electrons 2=5307
  - foils, Li ions charge transfer 2=13544
  - hydrocarbons, aromatic, in boric acid glasses, photoionization by u.v. 0=21290
  - ionization along tracks of electron pairs 0=355
  - K-shell ionization by electrons 3=21019
  - laser prod., energy independent of metal and α power 4=27576

  - solid cast explosives 0=3584
  - solid state detector 1=3091
  - submicronic particles, in ionized fields 4=19131
  - surface breakdown, electronic analogue 2=21221
  - thermal, in vacuum 0=14958

Ionization—contd
- **solids**—contd
  - transient electron effects, mechanisms 4=17454
  - traps, inducing luminescence and conductivity 0=1740
  - X-ray production in M shell of Nd, Sm, Gd, Tb, Dy, Ho by 25-100 keV protons 4=25505
  - Al, K-shell X-rays due to 60-500 keV protons 4=13046
  - Al_2O_3, α-phase, low-energy processes rel. to defects 2=12478
  - Ag–Pd alloy, effective charge of Ag and Pd ions 1=20576
  - Ag–Pd alloy, effective charge of Ag and Pd ions 2=8838
  - Ag^{110} in Mg, mobility, d.c., and scatt. 3=22831
  - Au, from α-particle deceleration by foils 2=19903
  - Be secondary ion spectra, under bombard. with 10-100 keV ions 3=5713
  - Be secondary ion spectra under bombardment with 10-100 keV ions 2=9640
  - Br_2. benzene, charge transfer lack, p.q.r. investigation 4=25802
  - CBr_4. p-xylene, charge transfer lack, p.q.r. investigation 4=25802
  - CCl_4. p-xylene, charge transfer lack, p.q.r. investigation 4=25802
  - Ca, multiple, Auger effect 3=12069
  - CdS, heat-treated in vacuum and O_2 2=4060
  - Co, in X-ray flash tube, rel. to K-spectrum 2=8547
  - Cs^+, calc. from CsI spectrum 2=1991
  - Cs^+ ions on Mo surf., secondary emission 3=5714
  - Cs^+ ions on Mo surface, secondary emission 2=9641
  - Cu phthalocyanines 2=17793
  - Cu, Kα radiation under electron impact, meas. 4=9664
  - Cu, K-shell X-rays due to 60-500 keV protons 4=13046
  - Cu target, 29 keV electron beam 3=21019
  - Fe, thermal, at 116 000°K, with subs. expansion in vacuum 0=14958
  - Ge donor impurities, photoionization spectra 2=2231
  - Ge, filamentary impact ionization at 4.2°K 2=8334
  - Ge, p-type, impact ionization of impurities, at low temp. 2=2142
  - Ge, photoionization 3=15578
  - Ge, semiconductors, quantum impact, thresholds calc. 4=6942
  - Ge, Zn doped, impact ionization 2=14535
  - Hg in discharge plasmas 0=7069
  - K, multiple, Auger effect 3=12069
  - K, single and double, by electron impact 2=1392
  - K, surface ionization by diffusion through a Globar 4=16546
  - K and W surfaces, 1100°-1200°K 2=13546
  - KBr, F-centre prod. efficiencies at liq. He temp. 4=12810
  - KCl, F-centre prod. efficiencies at liq. He temp. 4=12810
  - Li^+, photo-ionization 3=25047
  - LiF, F-centre prod. efficiencies at liq. He temp. 4=12810
  - Mg, in GaAs, activation energy 3=4922
  - Mg phthalocyanines 2=17793
  - Mg, single and double, by electron impact 2=1392
  - Mg, K-shell X-rays due to 60-500 keV protons 4=13046
  - Mo secondary ion spectra, under bombard. with 10-100 keV ions 3=5713
  - Mo secondary, ion spectra under bombardment with 10-100 keV ions 2=9640
  - Na, single and double, by electron impact 2=1392
  - NaCl, F-centre prod. efficiencies at liq. He temp. 4=12810
  - Pb, by 85 MeV γ-rays 0=11131
  - Pt wire, field ionization 3=12067
  - Rb^+, calc. from RbI spectrum 2=1991
  - Rb^+ ions on Mo surf., secondary emission 3=5714
  - Rb^+ ions on Mo surface, secondary emission 2=9641
  - $SbCl_3$, negative ion formation, by electron bombard. 4=453
  - Si, collision ionization, field dependence of conductivity 0=18033
  - Si, compacted, radiation-induced, dilatation effect 4=6889
  - Si, holes and electrons, rates meas. 4=17395
  - Si, impact ioniz. of impurities at low temps. 0=4348
  - Si, impact ionization 3=20416
  - Si, impurities by impact 1=19862
  - Si, p–n junctions, secondary 4=7002
  - Si photoionization 3=15578
  - Si, photoionization, quantum yield, wavelength and temp. depend. 0=15993
  - Si, semiconductors, quantum impact, thresholds calc. 4=6942

Ionization—contd
- **solids**—contd
  - Si, Li–B ion pairing 0=15940
  - SrS:Eu, $Eu^{2+} \rightarrow Eu^{3+}$ 0=13713
  - W wire, field ionization 3=12067
  - XeF_4, ionization potential from MO treatment 4=17299
  - ZnS:Cu, impact ionization 0=1764
  - ZnS, Fe and Cr ion charge transfer, e.s.r. meas. 4=1357

F^+ from metals by electron bombardment 1=10667
He^+, on reflection at solid surfaces 1=10744
In, on W, in fields up to 2 MV/cm 1=4568
K atoms, effect of elec. fields 1=3019
K^+, photoionization of layer adsorbed on Pt 2=22272
K, on W 3=9733
K, on W, shift of temp. threshold 0=10873
K, on W, temp. var. 4=23610
KCl, on W and Ta, ion velocity distrib. 3=5632
LiCl—NaCl—KCl, mass spectrometer successive detection of + and -ions 4=27490
LiF, thermal, energy calc. 2=20013
Na, on incandescent W, mass spectrometer study 0=10878
NaF, thermal, energy calc. 2=20013
Ne^+, on reflection at solid surfaces 1=10744
O^+ from CO absorbed in metals, by electron bombardment 1=10667
Pt wire, field ionization 3=12067
Tl, on W, in fields up to 2 MV/cm 1=4568
U 0=10874
U, on W, thermal, effect freon-12 2=22179
W, ionization of Sr and Ca atomic beams 3=24226
W molecular-beam detector, reduction of K ion background 1=13135
W surface, effect of BaO beam 3=23541
W wire, field ionization 3=12067

Ionization chambers
a.c. B chambers, characteristics 1=12032
  for α-activity, very low 2=5829
α-particle collimation, 4=30282
alpha-particle fast counting 2=5754
α-ray spectroscopy, review 2=5755
appl. to meas. of high resistances 1=16205
application in γ-ray intensity meas. 1=13378
argon-methane mixture, props. 2=20186
automatic, with variable sensitivity 1=3075
bakeable, for Townsend's coeffs. 2=7788
for beam location in polarization experiments 2=20184
for β- and γ- activity measurements 1=8399
β—γ ionization chamber for substandards 1=13208-9
β ray dosimeter, extrapolation 4=9180
for beta radioact. meas., comparison with liquid scintillation counters 4=15175
boron, three types, construction 0=5443
bremsstrahlung energy determ. in different countries 4=6013
for bremsstrahlung meas. 4=11966
bremsstrahlung monitor 2=5616
calorimeter, pulse-amplitude analyser 3=14496
capacitor type, for pulsed X-rays recording 3=24420
cavity ionization theory, validity 2=11823
cavity, stopping-power ratio meas. 2=3197
cloud type, with alcohol vapour diffusing in argon 3=7745
commercially available (British), characteristics 1=8400
compensated, cylindrically symmetrical 3=22030
for cosmic rays, on rocket 2=9942
current source for high resistance ($10^7\Omega$) meas. 2=1346
as current sources in high resistance measurement 1=8287
cylindrical, characteristics, air-filled 2=20185
cylindrical, correction factor for geometry 0=5445
cylindrical, pulse shapes 0=17137
d.c.-a.c. converter, use for X-ray monochrom. 2=11590
determination of B in gas mixtures 0=14153
differential, as bremsstrahlung monitor, in synchrotron 2=1623
differential, for gas activity meas. 1=7167

Ionization chambers—contd
for diffusion-chamber control 2=1636
discharge chamber, light-emitting track production 1=561
discharge chamber, 97.5% Ne, 2.5% A 1=12038
discharge number, var. with supply impedance 4=11561
discharge, self-maintained, due to α-particles 3=4038
distinguishing between He^3 and He^4 particles 0=2456
double collector, for simultaneous meas. for + and −ions 4=16423
double-grid 1=13211
double-grid 2=5507
effect of front size on meas. of small photon sources 0=17136
electron attachment effects 2=22356
electron drift velocities 1=18773
electron drift-velocity detector for impurity determ. in gas chromatography 4=29246
electron path length 3=21704
exit dosimeter, for effective patient thickness 0=7250
exposure dose rate meas. for kilocurie sources 2=17987
for extensive air showers 2=1739
fast spherical ionization chambers, action 1=394
feeding nuclear reactor period meter, tune response during startup transients, computer calc. 3=12741
fission chamber, small-diameter 3=24540
fission counter for estimation of U^{235} 0=15188
fission fragment studies 2=3196
fission, small, U coated W wire in Ar at 15 atm. 3=17098
fluctuation decrease by 0.8% acetylene addition 3=2152
flux perturbation by presence in reactor 0=15621
free-air chamber with mag. field, for photons up to 50 MeV 4—5886
free-air, field-guarded, for 10-50 kV X-rays 0=5441
free-air, for γ-rays from Co^{60} and Cs^{137} 0=17559
free-air, for soft X-ray region, design 0=5442
free-air, standard, for low-energy X-rays, at N.B.S. 0=7243
frequency response to neutrons 2=17985
gamma-activity comparison, semiautomatic 2=20205
for γ detect., thick-walled, energy var. calc. 4=16861
for γ detection, multilaminal, with sens. $>$ 15 MeV 4=16850
gamma-radiators, Ra equivalents 3=12367
gamma-ray, compensated B^{10} neutron detector 0=3882
gamma-ray intensity, absolute determination 0=7242
for γ-ray intensity meas. up to 100 MeV 1=13210
for γ-ray meas., strong sources 4=6262
γ-ray variable-pressure differential type, spectral sensitivity 4=16862
gamma-rays, pulse response 3=12368
gas concentration detector 0=14156
gas and vapour detection 0=8340
graphite, 4π gamma type 0=2455
graphite, thick-walled, absolute sensitivity 3=14821
grid, transparency coeff. method of meas. 2=17986
gridded, reduction of α-ray background 2=11824
gridded, waveforms and pulse-height distributions 2=3198
with grids, pulse amplitude, ionization process, calc. 1=12033
hexane liq., α-particle pulses 1=19055
hexane, n response, fast 3=19505
high temp., for neutrons 4=27869
insulators, PTFE 4=16729
"ionization calorimeter", Pu α-specimen use 3=6096
isotope determination in β-active gas mixture 3=6187
large counter for detection of weak α-activity 1=4842
liquid filled 1=9697
liquid-hexane filled, for fast neutrons 3=19650
liquid hexane, variable parallel plates, characteristics 0=5444
liquid, ion distribution 2=1165
long, anomalous response near guard tube 4=24941
in magnetic field, geometry, operating conditions 2=16089
meteorological effects on cosmic ray data from ionization chambers 1=3333
microwave discharge chambers, principles discussed 1=12039
molecular beam detector 2=20886
multicellular, for 150 MeV proton beam 2=5413
multichannel (128) recording device 0=3883
NBS P2, calibration, extension to 260 MeV 3=14819
for neutron detect. by current fluctuations 4=27868
neutron detector for reactor control 0=9384

Ionization chambers—contd
- neutron flux meas., operation to 400°C, suitable materials 0=15189
- neutron fluxes, absorbed dose determination 2=18033
- neutron sensitive, operation and design 1=763
- parallel-plate free-air, ion recombination 2=3195
- parallel-plate, integrating type 2=243
- parallel-plate, response to radiation pulses 4=24940
- parallel plate, simple design for demonstration purposes 0=1229
- for particle selection, by meas. E(dE/dx) 3=7744
- photodetectors, u.v., description 3=7337
- in photon intensity meas., accuracy 1=5708
- precision quantameter for high-energy X-rays 0=17298
- protons, 3 GeV, nonsaturating 4=9200
- pulse analysing system 2=9505
- pulse ion chamber, resolution and linearity 3=674
- pulses arising on grid 2=16090
- quantameters for γ-meas., absolute calibration 4=9163
- RC6, with low-polarizing voltage for compensating volume 3=22031
- for radioactive γ-ray meas. 4=6264
- for radioactivity meas. of C^{14} and S^{35} labelled gases 4=17080
- response in high-level radiation field 0=15185
- review article 0=17135
- sample changer, for gridded chamber 2=7787
- semiconductor, low-noise preamplifier 3=1913
- Sievert, electrometer improvements 0=3884
- spherical chamber, He^3—A filled, for slow neutrons 2=1622
- statistical behaviour, new treatment 3=14040
- temp. and pressure variations, automatic correction 0=15187
- thimble type, X-ray comparison, half-value layer 0=9232
- toluene—argon and n-heptane—argon filled, for α-particles 3=4291
- track angle meas. in gridded chamber 0=19966
- transition effect for electrons in walls 0=1230
- triple, with shielding screen, for fission fragment meas. 4=6396
- two-grid, operation and theory, low-energy particle spectra 0=15186
- use for detection of 0.3 eV resonance neutrons 3=2280
- use for X-ray tube output stabilization 0=20109
- for vacuum u. v., 1050-1500A 4=27303
- vacuum u.v. photoionization detector 3=21537
- V—I characteristics 4=16727
- X-ray meas., calorimetric calibr. 3=2151
- X-ray total beam-energy det., 6-170 MeV 2=20306
- zero-current and polarity effects, expt. 3=14820
- BF_3, pulse height distribution, study 1=10806
- H—Ne proton recoil, for fast neutron meas. 3=24750
- He discharge, for proton detection 2=3340
- He^3, distortion of pulse spectrum 4=16728
- He^3, for fast neutrons 3=668
- for Rn^{220} meas., atmospheric 4=23770
- Si p—n junction, shallow diffused type 1=3081
- for T meas. 4=15176
- U^{235} fission, B^{10} shielded, energy response 3=690

effect on geomagnetism, Halley Bay (Antarctica) observations 1=1572
effects of high-altitude nuclear explosion 9th July 1962 3=13701
effect on long-range v. l. f. radio waves 2=16070
effects of nuclear explosions, atmospherics enhancement 4=2283
effect on radio signals from satellite 1=6753
effects of recurring flares 3=23612
effects associated with Sept. 28, 1961 flare 2=19221
effect on satellite Doppler measurements 0=6633
effects of solar flare, July 11 and 14, (1959) 2=976
effect of solar flares on absorption 4=13844
effects of strong gyro-waves 0=6454
effect of vertical drift on nocturnal ioniz. density 0=6450
effective recombination coefficient 1=15278
elec. cond. between stratosphere 0=10409
elec. current detection above Greenland 0=10416
elec. current induction by periodic field 4=23801
electric conduction law, for waves in mag. field 2=7768
electric current induction by periodic field 4=23801
electric current systems due to mag. storms 2=15221
electric field, as cause of atomic oxygen red lines 3=23633
electric field intensity at surface of rocket 3=3487
electric field magnitude, rel. to mag. disturbances 3=3490
electroacoustic wave excitation by aerials 3=11423
electrodynamic behaviour and physical structure 4=23790
electrodynamic drift theory, rel. to sporadic-E 4=2300
electrodynamics, review 0=12156
electrojet, equatorial, radiowave backscatt. 4=4792
e. m. reflection virtual height meas. improvement 4=7913
electromagnetic waves absorption, decametric, from nuclear explosion 3=7721
e. m. wave absorption, models review 2=7772
e.m. wave backscattering, Boltzmann eqn. calc. 4=11235
e.m. wave diffraction by random ionosphere 1=6607
e.m. wave equation in dipolar coordinates 3=16252
e.m. wave prop., group velocity 0=308
e.m. wave propagation, math. problems 3=16247-8
electromagnetic wave propag., oblique path length and deviation 3=16253
electromagnetic wave reflection light, from Schlomilch's equn. 3=12331
electromagnetic wave reflection, low power ground source 4=2280
e.m. wave scatt., polarization analysis 3=17054
electron acceleration, in outer regions, mechanism 0=18486
electron attachment coeff. to O_2 3=362
electron clouds, artificially produced, lifetime and movement 3=21052
electron collision freq. meas., by absorption e. m. waves 4=7912
electron collisions, in D, E, and F2 layers, effective number 0=3349
electron collisions, frequencies in nitrogen 0=3350
electron conc., free, rocket meas. apparatus 2=17153
electron conc. with height, rocket radio study 2=8998
electron conc. with height, variations, rel. to model 2=8999
electron concn. meas. by ionosph. soundings and rockets 3=25922
electron conc. meas., satellites appl. 2=9109
electron concentration detm., by polarization fading analysis 4=4809
electron conductivity, rel. to velocity depend. of collision freq. 3=14763
electron content, bistatic lunar radar measurements 4=7914
electron content and distrib., satellite observations, theory and results of anal. 0=14205-6

Ionosphere—contd
electron content by Doppler integral of satellite original 3=3494
electron content by Faraday-Doppler technique 2=13030
electron content, from Faraday effect in transmission from fast spinning satellites 0=12340
electron contents, from Faraday effect of Sputnik 3 40Mc/s transmission 3=16272
electron content from Faraday fading observations 0=16426
electron content and irregularities, from polarization fading studies 0=14224
electron content, lunar radio obs. 0=10415
electron content at mag. equator, satellite obs. 2=13024
electron content measurement by Doppler shift and fading rate 3=13736
electron content at middle latitudes in summer 4=26837
electron content, from moon radio echo fading 0=760
electron content, from polarized galactic radiation 3=6980
electron content from satellite Doppler measurements 1=15258-9
electron content from satellite harmonic frequency Doppler shifts 1=20940
electron content, satellite observations, comparison of methods 4=2282
electron content, from simultaneous Faraday fading rate and differential Doppler shift 3=11434
electron content, total, below sporadic E stratification 3=13773
electron content, total, Faraday rotation meas. 2=11051
electron content, total, at middle latitudes, nr. solar cycle peak 3=18526
electron content, total, from satellite data 4=15888
electron content, total, over Singapore during mag. storm 2=13031
electron content, use of geostationary satellites 0=16427
electron content variations, July (1959) 2=885
electron content and variations by satellite radio observations 1=20921
electron content and variations by satellite transmission Doppler shifts 2=19220
electron content variations in winter 1=15260
electron density, conductivity and current system 3=11428
electron densities by cross-modulation, College, Alaska, 1960 3=6977
electron density, determination by earth-to-satellite transmissions 0=14271
electron density rel. to differential absorption 0=21349
electron density, distrib. calc. 0=761
electron density and distrib., rel. to magnetic storms 1=9198
electron density distribution from whistler and Faraday-fading data 1=1550
electron density equation solutions 4=10754
electron density in exosphere from whistlers 2=890-1
electron density above F2-layer, UK1 (Ariel) satellite data 3=16236
electrons, density, rel. to Faraday fading of satellite transmissions 2=4643
electron density, 400-1200 km, satellite signal meas. 0=12147
electron density fluctuations 1=20961
electron density in lower ionosphere due to cosmic rays 4=13847
electron density, rel. to magnetic dip. 0=16425
electron density measurement by Faraday rotation 1=15324
electron density, meas. by incoherent scattering 2=6938
electron density measurement to 1500 km 1=15323
electron density meas. using rockets 2=13019
electron density, meas. by whistlers, high-latitude field line 4=2210
electron density, profiles 0=21369
electron density profiles det., quick method 3=3496
electron density profile, at eclipse 4=7903
electron density profiles, estimation, test 1=15255
electron density profile by incoherent scattering 1=6613
electron density profile from ionograms 3=9081
electron-density profiles rel. to solar activity 4=2259
electron densities, r.f. impedance probe meas. 3=6972
electron density, rocket meas. 0=6448, 12146, 14208, 21350
electron density, rocket measurements 1=7936
electron density, rocket and satellite data, rel. to e. m. wave propag. 2=13020
electron density, from satellite observations 0=3348
electron density, solar flare effects, l.f. propag. 1=16589

Ionosphere—contd
electron density, spectrum, due to turbulence 0=12171
electron density, topside, effect of nuclear explosion, high altitude 3=18524
electron density up to 200 km 2=19215
electron density up to 200 km, rocket meas. 3=23610
electron density variations rel. to cosmic ray protons, July (1961) 2=22687
electron density, vertical distrib. meas. 0=10450
electron density, from whistler data 0=6449
electron density, July (1959) 2=887
electron density during Feb. 1961 solar eclipse 2=11050
electron detachment and recombination coeffs. 0=8375
electron diffusion and drift in nitrogen 0=14973
electron diffusion, vertical, near mag. equator, effects 1=1531
electron distrib., review of 1960-62 U. S. work 4=30952
electron distribution with height, July 1959, Moscow 1=20911
electron distribution, new model 0=2013
electron distribution, from satellite Doppler observations 0=14261
electron energies det. from v.l.f. emission 3=13700
electron heating by solar u.v., calc. 3=25920
electron and ion densities and variations below 90 km 1=20903
electron and ion density gradients 1=20962
electron motion 3=6973
electron temp., geomag. latitude depend. 3=25921
electron temp. meas., Langmuir probe 2=6936
electron temperature meas. and implications 4=7908
electron temperatures rel. to neutral particles 2=15222
electrons, penetrating, meas. 3=13798
electrons trapped by nuclear test, polarization of synchrotron radiation 4=7911
electrons, vibrating, damping coeff. 0=17116
electrostatic field theory 1=20971
electrostatic fields and equatorial electrojet 0=16478
electrostatic fields at equatorial latitudes, theory 1=20972
electrostatic fields, theory for nonpolar geomag. latitudes 0=14204
elongated irregularities 0=12163
emissions, discrete v.l.f., cyclotron theory 3=5214
enhanced ionization, by solar protons during polar cap absorption 2=4630
enhancement rel. to solar flare X-ray absorption 2=17164
entry of solar protons and its effects on radiowave propag. 1=20957
equatorial aeronomy conference, Huancayo, Peru 3=21044
equatorial E_s, geomagnetic disturbance effects 1=15276
equatorial electrojet, rocket magnetometer investigation 0=8424
equatorial, irregularity elongation 4=2263
equatorial jet over Ghana 2=17165
equatorial, satellite obs. 3=9078
equatorial spread-F belt, morphology 1=1538
equatorial spread-F irregularities, effect on c.w. transmissions 1=8393
equipotentials, effect of interplanetary mag. field, resemblance to S_D current system 1=6635
equivalent height of reflection, radio waves, calc. 2=21647
events, Nov. (1960) 2=18216
exosphere, amplification of v.l.f. e.m. wave by proton beam 2=15264
exosphere coupling with solar wind 0=16456
exosphere, disturbances in geomagnetic storm 1=20897
exosphere, electron density rel. to gyro freq. 3=5211
exosphere, hydromag. oscillations 2=19265
exosphere, isotropic hydromag. waves, models 3=1474
exosphere, magnetohydrodynamic waves 2=13052
exosphere, model 1000-1700 km, from Echo I path 2=6931
exosphere, O, H, He, distrib., 1500, 2000°K 3=16240
exosphere, propag. of hydromag. waves 3=483
exosphere and upper F region, origin, theory 1=15285
extension of solar corona to outer ionosphere 0=8397
extraterrestrial radio-signal focusing by aerial in ionosphere 1=18145
fading, down-coming single wave, statistical anal. 0=17121
fading of radiowaves reflected at oblique incidence 1=20934

Ionosphere—contd
fading of radio waves scattered at vertical incidence 1=20936
fading speed of 70-200 kc/s radiowaves, rel. to incidence of meteors 1=1545
Faraday effect calculation with respect to ionosphere 1=377
Faraday rotation 4=13841

positive ion expansion in plasma expansion of spark 1=18789
positive, kinetics at cathode of luminescent discharge 1=1893
positive, Thomas—Fermi model numerical solns. 0=19608
production of negative ions by atomic collisions, review of theory 1=9526
propane, dissociation cross-sects., for Ne atom collisions 4=28274
propane, fragment production cross-sections 3=1932
quadrupole effect, second-order, for nuclear hexadecapole coupling 2=18396
quadrupole polarizability and antishielding factors 2=10199
quantum defect method, basis 2=18395
radiation emission, in plasma in mag. field 2=5388
range—energy relationships, in nuclear emulsions 0=12771
range in solids, det. rel. to proton range 1=4667
rare-earth, in crystals, mag. and spectroscopic props., theoretical investigation 2=21295
rare earth, in crystals, shielding for internal elec. field 4=25808

Ions—contd
- rare earth, divalent, in cubic crystals, spectra 4=20465
- rare earths, anti-shielding factors, calc. 3=742
- rare earths, luminescent states, perturbing influences 0=18136
- rare-gas molecule-ion formation 2=16569
- reactions with molecules, study, mass spectrometer 2=3101
- resonance charge exchange with atoms 0=8990
- resonance, r.f. probe obs., hot cathode Hg discharge 4=14681
- runaway and suprathermal particles 1=9562
- scattering processes and related metastable levels, independent particle model 4=24544
- Schwartzschild index of Ilford Q plates for ions of medium mass 2=19734
- secondary emission, from Mo, under Ne^+, A^+, Kr^+ bombard. 0=17044
- secondary positive, yield and energy distrib. from metal surfaces 0=9095
- single, slow, detection, by field-emission microscope 4=2738
- singly charged, low K.E., detection 1=9920
- slow, coeff. of dynamic friction 1=16274
- slow ions formed by H^- and O^- in various gases 1=4558
- in solutions, diffusion of 3 ion species 3=21327
- in spark discharges, concn., time variation 3=2553
- spectra, using Van de Graaf accel. 4=22285
- spectra, X-ray satellites, screening 3=10443
- spectral distribution of bremsstrahlung 0=1265
- spectrograph, focusing, parabola 2=20048
- spectrum, multiple, excitation, as nova spectrum 4=15922
- Stern–Gerlach transverse expt., rel. to mag. moment 2=6112
- stopping power, from effective cross-section theory 0=10604
- in sun, diffusion 0=18766
- thermalization on injection into plasma 1=11927
- thermodynamic props. of unipositive gaseous elemental ions, 100-50 000°C, calc. 0=14972
- 3d group central, optical electromag. 3=8222
- Thomas–Fermi model, diamagnetism 0=5842
- Thomas–Fermi positive ions, interpolation formulae, graphical 3=7429
- in three-level system, resonant harmonic generation 4=24876
- tracks in emulsions, effect of development on resolution 0=12778
- transition elements, props. and electronic structures 0=20727
- transition metal ions, zero field splittings 3=25164
- transition metals, crystal field effects on 3d charge densities and mag. form factors 0=9886
- transition metals, 1st-row, radial wave-functions 2=6084
- triphenylcarbonium ion, n.m.r. spectrum 1=12313
- triphenylene, mono- and divalent, electronic spectra 0=20648
- triple ionization in small molecules 4=11511
- unipositive gaseous elemental, thermodynamic props. 2=7561
- wave-functions and term energies, parameter tables 4=6459
- Ag in Ag halides, mobility 2=14598
- Ag, effective charge in Al 2=10416
- Ag^+, diffusing in Ge, in elec. field 0=15870
- Al^-, formation, interaction of electrons with $AlCl_3$ 4=18674
- Al^{2+} + H, charge exchange cross section, matrix calc. 4=29871
- AN^+ and AN_2^+, formation and detection 0=12584
- Ar, effect of bombardment on mica and graphite 3=17806
- Ar, electron capture and loss, 250-1400 keV 4=16431
- Ar, energy loss and effective charge in H_2, N_2 and Ar, at < 10 MeV/a.m.u. 3=1937
- A, range in emulsion, at energy up to 10 MeV/nucleon 0=4105
- A^-, formation by charge transfer from fast H beam 1=16277
- $Ar^+ - Ar$ collisions at keV energy, inelastic energy loss 3=709
- A^+—A potential energy functions 1=818
- A^+, charge exchange with A atoms, cross-section, calc. 1=4563
- A^+, charge transfer to CH_4 0=16976
- Ar^+, detection, emulsion, up to 25 keV 4=9037
- A^+, excitation in inert gases, 5-24 keV 0=10880
- A^+ in He, Ne, A, Kr and Xe, excitation mechanism 1=276
- Ar^+ metastable state near Ar^{2+} threshold 4=1222
- Ar^+, N^+, N_2^+, incident on Cu and Al, momentum accommodation above sputtering threshold 4=19123
- A^+, reflection on solid surfaces 1=10744
- A^+, sputtering of Cu and Pb 2=3094
- A_2^+ in GM counter, quenching mechanism 2=242
- Ar^{2+} + He, charge exchange cross section, matrix calc. 4=29871
- A^{2+}, sputtering of Si, yield rel. to A^+ 1=1930
- A^{3+}, A^{4+}, mechanism of formation 2=22171
- Ar^{8+}, ionization potential, corrected value 3=8214
- Ar^{41}, range in W at keV energies 3=22878
- $(AKr)^+$, detection 0=12583
- AKr^+, formation in A–K collisions 0=16971
- AXe^+, in GM counter, quenching mechanism 2=242
- AsO^+, observation in As_2O_3 discharge, u.v. band spectrum 1=14051
- Au^+, in Ge, photocond. kinetics, compensated 2 eV level 4=1684
- B–S system, species formed at high temp. 0=14970
- Ba^{2+}, hydration energy 1=15196
- Be, range in air 0=2327
- Be^9, range in Al and Au, at 2-21 MeV 3=2048
- Be^{++}, scattering of electrons 0=11504
- Br^-, structure 0=17647
- Br_2^- in KBr crystals, hole photoconduction 2=8425
- Br^+ to Br^{13+}, formation from methyl bromide by nuclear isomeric transition of Br^{80m} 0=16388
- C, energy loss and effective charge in H_2, N_2, CH_4, Ar and He, at < 10 MeV/a.m.u. 3=1937
- C, energy loss and range in C, Al, Ni, Ag and Au 1=4668
- C, molecular, formed in spark source, mass spectrographic study 4=9782
- C, range in Au 1=4667
- C, range in emulsion, at energy up to 10 MeV/nucleon 0=4105
- C^-, electron photodetachment calc. 2=12298
- C^-, structure and photodetachment spectrum 2=6088
- C^{++} and C^{4+}, scattering of electrons 0=11504
- C_n^+, n = 3 to 28, in h.f. spark 0=2351
- C_n^+, from r.f. spark with graphite electrodes 2=166
- C^{12}, energy loss in Mylar and polyethylene 1=338
- $(C^{12})^{4+}$, range in Al, Au, Cu, 50-110 MeV 0=1171
- $C^{12,13}$ charge states 4=24564
- CCl^+ and CF^+ spectra, really due to BF and BCl 3=8252
- $C_3H_3^+$ formation in methane, acetylene oxidation 4=13713
- $C_3H_3^+$ formation 4=13714
- CO^-, formation by charge transfer from fast H beam 1=16277
- CO^+, in comets, formation, proton charge exchange theory 0=3415
- CO^{++}, dissociation, double mass spectrometer obs. 4=22429
- $(CO_2)^+_n$, $n < 23$, in mass spectra 1=9960
- Ca, in H pinched plasma, radiative losses 0=1131
- Ca^+ height distribution in upper atmosphere 1=10321
- Cd II, excited states, mag. resonance in atomic beam 0=17683
- Cl, electron photodetachment calc. 2=12298
- Cl^-, hydration energy 1=15196
- Cl^{35}, in various cpds., n.q.r., 4.2-300°K 4=26458
- Co II, crystal-field spectra in various cpds. 3=25453
- Co^-, discovery 0=2320
- Co^{++} paramagnetic, in soln., light absorption 1=15883
- $Co(ethylenediamine)_3^{3+}$, optical rotatory dispersion 3=730
- $CoFe_6^{3-}$, in various salts, spin-free $3d^6$ systems, Jahn–Teller effects 1=3831
- Cr, adsorbed, by exchange of ions, e.p.r. spectrum 3=8707
- Cr, opacity calcs. 2=15651
- Cr in ruby, spin-lattice relax. 2=4275
- Cr^{3+}, in corundum, spin-lattice interaction, 4-90°K 2=776
- Cr^{3+}, in octahedral crystal fields, spectrum 3=25454
- Cr^{3+} in solution, light absorption 2=5018

Ions—contd
- Cr^{3+}, in $ZnWO_4$, e.s.r. and spin—lattice relax. 3=25569
- Cs, charge exchange with Cs atoms 1=11915
- in Cs plasma, volume recombination 3=24278
- Cs, positive, reson. charge exchange meas. 2=17789
- Cs^-, resonance charge exchange, 900-2400 eV 4=18692
- Cs^+—Cs atom charge transfer, 50-4000 eV meas. 3=5629
- Cs^+, desorption from W, kinetics 2=17073
- Cs^{137}, range in Al 3=12608
- Cu^{2+}. mag. anisotropy, susceptibility 3=1 3224
- Cu^{2+}, octahedral complexes, spin inversion and e.s.r. spectrum 3=25570
- Cu^{2+}, in soln., paramag. resonance, 90° and 300°K 0=16714
- Cu^{2+}, in ZnO and YGa garnet, absorption spectrum 1=14609
- Cu^{63+}, in various cpds., n.q.r., 4.2-300°K 4=26458
- $Cu(CN_4)^{2-}$ complex, electronic structure and absorption spectrum 4=1273
- $[Cu(CN)_4]^{2-}$, energy levels, absorpt. spectrum., polarization 3=19992
- D^-, 20 MeV, electron detachment by mag. field 3=24213
- D^+, irrad. of metals, disintegration 2=11727
- D^+, D_2^+, energy distrib. in D_2 glow discharge 2=3014
- D_2^+, charge exchange, in H_2 atmos. 1=4564
- D_2^+, detection, emulsion, up to 25 keV 4=9037
- D_2^+ dissociation 3=15391
- D_2^+, number of bound states, calc. 0=13434
- D_2^+, range in quartz at 7.5-52 keV 1=556
- D_2^+, scattering in D gas 0=4168
- D_3^+ dissociation into D_2^+ and D^+ 3=1931
- Er^{2+}, in MeF_2(Me = Ca, Sr, Ba), absorption and emission spectra 4=13038
- Eu^{3+}, in Eu ferrite garnet, magneto-optical props. 4=17563
- F^-, electron photodetachment calc. 2=12298
- F^- wave functions and correlation energies 4=3789
- Fe, self-ionization and spectra in stars, nebulae and solar corona 0=846
- Fe series (Sc to Cu), Hartree-Fock calculations 0=9737
- Fe^-, discovery 0=2320
- Fe^{2+}, energy-level splittings in cubic and axial fields 0=10228-9
- Fe^{2+}, Sternheimer factors, variational calc. 3=2567
- Fe^{2+}, in tetrahedral sites, Jahn—Teller distortions 4=15406
- Fe^{3+}, in andalusite, isomorphism, by e.s.r. 3=20855
- Fe^{3+}, antishielding factor, calc. 1=795
- Fe^{3+}, e.s.r., in corundum, temp. depend. 2=768
- Fe^{3+}, e.s.r., in corundum, temp. depend. 3=5039
- Fe^{3+}, e.s.r. in MgO, cubic field splitting, pressure depend. 0=18218
- Fe^{3+}, e.s.r. in TiO_2 (rutile) at low temp. 0=11951
- Fe^{3+} in $MgAl_2O_4$ and $ZnAlO_4$, exchange interaction and field splitting parameter 1=11481
- Fe^{3+}, in MgO, acoustic e.s.r. 4=1867
- Fe^{3+}, in $ZnWO_4$, e.s.r. and spin—lattice relax. 3=25569
- Fe^{13+}, ground and excited states, self-consistent field 0=20542
- Ga^-, formation, interaction of electrons with GaI_3 4=18674
- Gd^{+++} absorption bands, oscillator strengths 3=19935
- Gd^{3+}, in CaF_2, e.s.r. 4=1876
- Gd^{3+}, spin-polarized Hartree—Fock calc., mag. interactions 1=7524
- H, fast proton resonant charge transfer 4=24575
- H, formation by H atoms in H_2 0=11502
- H molecule-ion, statistical theory 4=12451
- H, neutral, highly-excited, formation by charge exchange 4=28155
- H, proton resonance charge exchange 1=17291
- H, sputtering-yield for metals 4=12826
- H and He, interactions, energy calc. 0=7716
- H, O and O—H ions, prod. by elec. bombard. water vapour 0=8987
- H^-, absorption coeffs. 0=9765
- H^-, accurate solution 0=11503
- H^-, binding energy from photodetachment cross-section 4=9629
- H^-, bound-free absorption coeff. 3=2557
- H^- bound—free absorption coeff. 4=25482
- H^-, collisions with H atoms, charge transfer and electron production cross-sections 0=13409

Ions—contd
- H^-, continuous absorption coeff., analytical formula 1=17270
- H^-, continuous absorption due to free—free transitions, calc. 1=2277
- H^-, doubly excited states 0=17666
- H^-, in elec. field, mean life against dissociation 3=12083
- H^-, electrostatic polarizability, calc. 1=12242
- H^-, formation in H_2O vapour, cross-section 1=13065
- H^-, free-free absorption coeff. 0=7076
- H^-, injector for electrostatic generator 2=17908
- H^-, photodetachment cross-section, spectral depend. 0=2714
- H^-, photodetachment rel. to oscillator strengths 2=20741
- H^-, photo-ionization, calc. 0=9752
- H^-, positron binding energy to calc. 2=18406
- H^-, prod. by H^+ and H_2^+ bombard. of W 0=8986
- H^-, in solar atmos., collisional dissociation 0=18747
- H^-, stopping by atomic H at low energies 0=9755
- H_1^-, H_2^+, H_1°, prod. by p-beams in H_2, He, Ne, A, CO_2 C_3H_8 2=1386
- H^+, collisions with H atoms, charge transfer cross-sections 0=13408
- H^+, collisions with He, H_2, prod of Lyman-α radiation 3=6366
- H^+, formation, on incandescent W 0=8985
- H^+, growth in water vapour 4=457
- H^+-like, excitation and ionization in solar corona 2=15346
- H^+, resonance charge transfer with H(1s), calc. 1=19607-8
- H^+, stopping power of H_2 for 2=18428
- $H^+ + H(1s) \rightarrow H(1s) + H^+$, cross-section calc. 3=1938
- H^+ and H_2^+ densities in slit source by mass spectrograph and spectroscope 1=16432
- H^+ and H_2^+, injection into plasma 2=13570
- H^+, H_2^+, prodn. by fast H atoms 3=7427
- H^+ to H_4^+, light emission 0=20646
- H^+, H_2^+, D_2^+, detection, emulsion, up to 25 keV 4=9037
- H^+, H_2^+, H_3^+, charge exchange and ionization 0=2329
- H^+, H_2^+, H_3^+, discrepancies in Al(p,γ) resonance studies 1=691
- H^+, H_2^+, H_3^+, reaction rate consts. in H_2 and H_2—He discharges 0=14969
- H^+ and O^+ in thermosphere altitude distrib. 2=2472
- H_2, induction energies, spherical term 3=17568
- H_2^-, activation energy, theory 2=157
- H_2^-, energy absorption and emission, model 2=5306
- H_2, metastable states, MO calc. 2=3752
- H_2^-, observation 0=2319
- H_2^-, $^2\Sigma_u^+$ state, potl. curve 3=25096
- H_2^+, alignment by selective photodissociation 2=6229
- H_2^+, binding energy, from 3-body theory 1=4924
- H_2^+, charge exchange, in H_2 atmos. 1=4564
- H_2^+, collisions with He, H_2, prod of Lyman-α radiation 3=6366
- H_2^+, cyclotron freq., mag. moment of proton 1=10886
- H_2^+, dissociation, in collision with H_2, N_2, He, A and Kr 1=16266
- H_2^+, dissociation, effect of vibrational excitation 4=20115
- H_2^+, dissociation by H 0=244
- H_2^+, dissociation in magnetic mirror for plasma production 4=21543
- H_2^+, dissociation by variable strong elec. fields 1=2947
- H_2^+, dissociation, vibr. effects 2=2026
- H_2^+, interstellar, monochromatic radio emission 2=1019
- H_2^+, isotopic, reaction with isotopic H_2 3=2677
- H_2^+, Lorentz dissociation, proton trapping in DCX-1 4=5687
- H_2^+, μ-mesic, properties 0=11492
- H_2^+, one, two and three-centre wave functions 3=22541
- H_2^+, r.f. spectra, calc. 0=17742
- H_2^+, range in quartz at 7.5-52 keV 1=556
- H_2^+, relative population of vibr. levels 2=10106
- H_2^+, S-states, energy calc. 0=17762
- H_2^+, vibrational states of ground electronic state 0=13434
- $H^{+,2+}$ in CH_4, CF_4, C_2H_6, C_2F_6, interaction energies 2=12354
- H_2^+ and H^+ in hydrogen photoionization 1=11907
- $H_2^+ \rightarrow H^+ + H^\circ$ or $2H^+ + e^-$, cross-sections in argon 3=2585
- H_2^+, HD^+, HT^+, dissociation by elec. and mag. fields, calc. 1=8862
- H_2^+, H_2O^- struct. and stability, by valence bond method 4=10651

Ions—contd

H_2O, dissociation due to collisions with mols., 3.5—100 keV 4=9783
in H_2O vapour glow discharges 3=7480
H_3^+, occurrence in field ionization of H 3=4019
H_3^+ as ion usually observed, not H_2^+ 1=2944
H_3^+ molecule—ion, pot. energy surfaces 4=12482
H_3^+, structure and energy calc. 4=12481
H_3^+, H_2D, formation in omegatron 2=22177
H_3O^+ formation in mass spectra of alcohols and formate esters 4=9780
H_3O^+, LCAO MO study, rel. to expt. 1=19654
H_4^+, H_5^+, detection in mass-spectrometer 4=9740
H_5, detection in H glow discharge 2=22190
He, electron capture and loss, in H, He, N, A, Kr, 200–1500 keV 2=162, 22169
He, electron scattering, exchange polarization approx. 4=25564
He, energy loss and effective charge in H_2, N_2 and Ar, at < 10 MeV/a.m.u. 3=1937
He-like ions, second-order perturbation theory 1=7429
He, mobility in liq. He 0=8902
He, passage through rotating He II 2=22108
He plasma, diffusion, in magnetic field 1=13082
He sequence, correlation energies 0=9739
He sequence, relativistic and radiative corrections of eigenvalues 0=9740
He I, departure from Saha equation 1=5968
He II, liq., evaporation 0=8901
He II, mobility 0=8900
He II, motion in rotating He under elec. field 4=14499
He^-, dissociation by variable strong elec. fields 1=2947
He^-, lifetime and interaction cross-section with He gas 1=4559
He^+, charge transfer to O_2 and N_2 3=24224
He^+, collisions with H_2, prod. of Lyman-α radiation 3=6366
He^+, ionization by electron impact, calc. 3=14519
He^+, ionization by electron impact, cross-section 1=18765
He^+, ionization of He, Ar, H_2 and N_2, 15-180 keV 4=2944
He^+ in outer atmosphere, 1630 km expt. evidence 2=8993
He^+, range in quartz at 7.5-52 keV 1=336
He^+, reflection on solid surfaces 1=10744
He^+—A potential energy functions 1=818
He^+—He potential energy functions 1=818
He^+, HeH^+, reaction rate consts. in H_2—He discharges 0=14969
He^+—Ne potential energy functions 1=818
$2He^+ \rightarrow He + He^{2+}$, energy change, rel. to Coulomb repulsion integral 3=22576
He_2^+, suggested cause of He emission continuum 1=12248
He_2, Σ_u state binding energy calc. 4=9712
He^{2+}, formation from He by electron impact, cross-section 0=14968
He^{2+}—He charge exchange, resonant 3=16909
$He^{2+} + He^+(1s) \rightarrow He^+(1s) + He^{2+}$, calc. 3=1938
He^3, liq. mobility rel. to pressure and temp. 2=15832
He^3, prod. in accelerators 1=2237
He^3 and He^4 I, liquids, mobility, theory 3=317
He^4, energy loss and range in solids 2=1931
He^4 I, liq., mobility rel. to pressure and temp. 2=15832
$(He^4)^+$, orientation by exchange collisions with Cs atoms 2=17785
Hg^+, drift velocities in vapour 4=24576
Hg^+ and Hg_2^+, drift velocity, Hornbeck determ. method 4=14577
Hg^{2+}, electron distrib., calc. from statistical model 0=9742
HgI_3^- configuration, in $(CH_3)S.HgI_3$ crystals 3=16087
Ho^{2+}, in MeF_2(Me = Ca, Sr, Ba), absorption and emission spectra 4=13038
Ho^{3+}, free ion, term scheme eigenstates calc. 1=19584
Ho^{3+} in $LaCl_3$, absorp. and fluoresc. spectra rel. to energy levels 4=30685
I^-, adsorption on Cu at low concns. 1=20685
I^- photodetachment energy dependence near threshold 4=24582
I^- spectrum, in molten salt, charge transfer 4=15338
I^{127+}, stopping cross-sections in Au, Ni, Al, C 4=3815

Ions—contd

In^-, formation, interaction of electrons with InBr 4=18674
In^+ above In_2O_3, mass spectrum 3=12010
InO above In_2O_3, mass spectrum 3=12010
In_2O^+ above In_2O_3, mass spectrum 3=12010
K, analysis following Ar^{41} β^- decay 3=19954
K, mobility in N and Ne at 294°K 0=1103
K, positive, resonance charge multiplication 0=8988
K, reson. charge exchange, with K atoms 1=13070
K^-, resonance charge exchange, 900-2400 eV 4=18692
K^+, double charge exchange in gases 1=18780
K^+, hydration energy 1=15196
K^+, resonance charge transfer, cross-section meas. 1=278
K^+, resonance charge transfer with K 1=4566
K^+, in N_2 gas, mobility meas. by "time of flight" apparatus 3=7437
$K_3Fe(CN)_6$ ferric ion exchange interaction effects 1=20224
K^{42}, range in Al 3=12608
Kr, ionization of inert gases 0=12578
Kr^+, charge exchange with Kr, at 3-7 keV, cross-section 2=160
$Kr^+ + CH_4$, charge transfer reactions 0=16976
Kr^{85}, 40 keV, range in WO_3 3=22878
Kr^{85}, heavy, channelling in monocryst. Al 4=22642
Kr^{85} range in Al, W, 2-600 keV 3=14675
Kr^{2+} + Ne, charge exchange cross section, matrix calc. 4=29871
Kr^{3+} + He, charge exchange cross section, matrix calc. 4=29871
Kr^{4+} + He, charge exchange cross section, matrix calc. 4=29871
Kr^{4+} + Ne, charge exchange cross section, matrix calc. 4=29871
La, spectrum, in CaF_2, SrF_2, BaF_2, after 2 MeV β irrad., d^1 4=10167
Li, isotopic effect in countercurrent electromigration in molten LiBr and LiI 0=1959
Li-like, ground state, Hartree–Fock eqn. 2=22906
Li-like, ^2S ground state, wave-functions 0=15643
Li–B ion pairing, effect on Li^+ drift in Si 0=15940
Li^- to F^-, wave functions 4=25495
Li^+, bombard. of stainless steel, electron yield 1=8345
Li^+, charge-changing collisions in H_2, He, N_2 at 10-475 keV 0=19625
Li^+, double charge exchange in gases 1=18780
Li^+, range in Ag-backed C foils 1=8345
Li^+—Li charge exchange, resonant 3=16909
Li^+ to Ne^+, wave functions 2=8059
Li^+—O interaction in Si, from drift mobility 1=11301
Li^+, in Si, capture by B^- ions, recombination kinetics 1=11302
Li^{2+} + H, charge exchange cross section, matrix calc. 4=29871
Li^{2+}—Li charge exchange, resonant 3=16909
$Li^{6,8}$, range in emulsion 0.75-2 MeV 0=9108
Li^8, range in H_2, D_2 and He, 40-450 keV 1=7107
LiH^+, LiH^{2+}, dissociation by elec. and mag. fields, calc. 1=8862
Mg II, excitation by electron impact 1=13962
Mg^+ height distribution in upper atmosphere 1=10321
Mg^{2+}, hydration energy 1=15196
Mg^{27}, range, from Al^{27}(n,p) 3=6270
Mn in TiO_2 (rutile), e.s.r. spectrum at 9.505 kMc/s 1=1263
Mn^{2+}, antishielding factor, calc. 1=795
Mn^{2+}, crystal field effects on 3d charge density and mag. form factor 0=9886
Mn^{2+}, cubic field splitting, proposed e.s.r. expt. under high pressure 0=11944
Mn^{2+}, e.s.r. in MgO, cubic field splitting, pressure depend. 0=18218
Mn^{2+}, e.s.r., in SrS 2=771
Mn^{2+}, e.s.r., in SrS 3=5042
Mn^{2+}, in soln., paramag. resonance, 90° and 300°K 0=16714
Mn^{2+}, in MgO, acoustic e.s.r. 4=1867
Mn^{2+}, paramag. resonance in Al_2O_3 (corundum) 0=11942
Mn^{2+} paramagnetic resonance 1=11480
Mn^{2+}, in SrS, e.s.r. spectrum, relaxation effects 2=781, 23701
Mn^{2+}, in SrS, paramag. relax. time 4=1867

Ions—contd
Mn^{2+} in $ZnAlO_4$, exchange interaction and field splitting parameter 1=11481
Mn^{3+}, Jahn–Teller distortion in tris-acetylacetonate 0=20636
N ions, kinetic energy meas., line shape analysis in mass spectrometer 4=16565
N, mobility and electron-attachment probab. rel. to O_2 and water vapour 3=5624
N, molecular ions 0=2323
N, range in Au, 0.4-6.4 MeV 3=4211
N, range in air 0=2327
N, range in emulsion, at energy up to 10 MeV/nucleon 0=4105
N_2, in glow discharges, mass spectra 3=5643
N^-, formation, in gas targets, N^+ bombarded 0=10877
N^- spectrum, shock excited 4=21455
N_2^-, possible occurrence in atmosphere 0=10400, 16422-4
N^{3-}, electron affinity, calc. 0=13483
N_2^+, absorption coeff., 580-1000A 3=25101
N_2^+, first negative band intensity behind shock waves rel. to pres. 3=4756
N_2^+, formation in presence of He 3=10514
N_2^+ ions, atmospheric distribution, Antarctic 1=1526
N_2^+, vibrational levels of $B^2\Sigma$ state in polar aurora 1=15312
N_2^+ and H_2^+, photographic plates density curves 2=9653
N_2^+ and N_3^+, drift velocity 4=14578
N_3^+, N_2^+ in glow, drift velocity studies 4=24576
N_2^{2+}, charge-exchange, dissociation collisions 3=21719
N^{2+} + He, charge exchange cross section, matrix calc. 4=29871
N^{13}, ang. distrib. in $Au^{197}(N^{14}, N^{13})Au^{198}$ 0=15584
N^{14}, energy loss and range in solids 2=1931
$(N^{14})^{5+}$, range in Al, Au, Cu, 50-110 MeV 0=1171
Na, from β^--decay of Ne^{23}, electron shake-off 3=15141
Na^-, resonance charge exchange, 900-2400 eV 4=18692
Na^+, double charge exchange in gases 1=18780
Na^+, hydration energy 1=15196
Na^+, resonance charge exchange in H 1=17291
Na^{24}, heavy, channelling in monocryst. Al 4=22642
Na^{24}, keV energies, range in Al 3=24385
Na^{24}, range in Al 3=12608
Na^{24}, range in Al, at keV energy 1=7106
Na^{24}, range in Al, from reaction $Al^{27}(n, \alpha)Na^{24}$ 4=6355
NaCl, secondary emission, under Li ion bombardment 1=13129
Nd, relaxation processes, resonance coupling, under pulsed excitation 4=17604
Ne, ionization of inert gases 0=12578
Ne, range in emulsion, at energy up to 10 MeV/nucleon 0=4105
Ne^+, range in quartz at 7.5-52 keV 1=536
Ne^+, reflection on solid surfaces 1=10744
Ne^+—A potential energy functions 1=818
Ne^+—Ne potential energy functions 1=818
Ne_2^+, formation in Ne glow discharges 0=10890
Ne^{20}, energy loss in Mylar and polyethylene 1=538
Ne^{20}, energy loss and range in solids 2=1931
$(NeA)^+$, formation and detection 0=12583
NH_3, dissociation due to collisions with mols., 3.5—100 keV 4=9783
NH_4^+ and ND_4^+, force consts. 0=17724
Ni^-, confirmation of existence 0=2320
Ni^{2+}, crystalline field effects 0=20770
Ni^{2+}, mag. suscept. in ZnO and CdS 4=17616
Ni^{2+}, spin polarized, electron densities and mag. form factors, unrestricted Hartree–Fock method 0=20769-70
Ni^{2+}, in NiO, aspherical 3d electron distrib. 1=6103
$NO(SO_3)_2^{--}$, paramagnetic, relaxation study 0=16713
$NO(SO_3)_2^{2-}$, relaxation study by dynamic polarization 1=2769
NO^+, formation in atmosphere 1=20890
NO^+, formation in ion–molecule reactions 3=23539
NO^+, in GM counter, quenching mechanism 2=242
NO_2^-, formation by charge transfer at low energies 2=3009
NO_2^-, spectrum, solvent band shifts and electronic transition assignments 4=3878
NO_3^- in soln., u.v. absorpt. 3=1689
NO_3^- in solution, absorption spectra 2=5024
NO_3^- spectrum, in molten salt, charge transfer 4=15338

Ions—contd
O, discharge glow, masses, O_2^+, O^-, O_3^- 3=19183
O, energy loss and range in C, Al, Ni, Ag and Au 1=4668
O, in H pinched plasma, radiative losses 0=1131
O, range in emulsion, at energy up to 10 MeV/nucleon 0=4105
O, slow electron attachment coeffs. 0=8995
O^{16}, energy loss in Mylar and polyethylene 1=538
$(O^{16})^{5,6+}$, range in Al, Au, Cu, 50-110 MeV 0=1171
O^-, electron photodetachment calc. 2=12298
O^- from O_2 and CO, mass spectrometric meas. 3=12070
O^-, O_2^-, O_2^+, O_4^+, in glow discharges, mass spectrometer study 0=9005
O_2^-, electron affinity 1=5420
O_2^-, electron attachment coeff. 0=8480-1
O_2^-, energy absorption and emission, model 2=5306
O_2^-, prod. by low-energy electron attachment, cross-section 3=362
O^+, high-energy, in CO_2 mass spectra 0=19615
O^+, O_2^+, O_3^+, O^{+++}, mass spectra lines 0=10875
O_2^+, near i.r. spectrum and mol. constants 2=16518
O_2^+ above In_2O_3, mass spectrum 3=12010
O_2^+, O^-, O_2^-, O_3^- in pure oxygen 3=7438
O^{4+}, electron impact ionization cross-section 3=5619
O^{5+}, electron impact ionization cross-section 3=5619
O^{5+} excitation cross-section 3=4713
—OH groups on surface of $Al_2O_3.xH_2O$, rel. to fluorescein luminescence 2=4183
OH, metastable transition rates, effect of initial prep. 4=13706
OH, use of electronic band for H-flame temp. determ. 4=10641
OH^- electron polariz calc., ϵ var internuclear dist. 4=25651
$OH^- + ROH \rightarrow RO^- + H_2O$ in alcohols 4=13725
Os–O system, species found at high temp. 0=14971
$PO_2H_2^-$, n.m.r., ~ 1G 4=1309
Pn^+, mass spectra from red P 2=1393
Pt^+, secondary emission from Pt by inert gas ion bombard. 0=17043
Rb^-, resonance charge exchange, 900-2400 eV 4=18692
Rb^+, structure 0=17647
Rb^{86}, heavy, channelling in monocryst. Al 4=22642
Rb^{86}, range in Al 3=12608
Rn^{222}, 2-450 keV, range in Al, W 3=14676
SF_6, Townsend discharge, identification, by time-of-flight mass spectrometry 3=16905
SO_4^{2-}, adsorption on Cu at low concns. 1=20685
Sc, spectrum, in CaF_2, SrF_2, BaF_2, after 2 MeV β irrad., d^1 4=10167
Si^{2+} + H, charge exchange cross section, matrix calc. 4=29871
$(SiO_3)^-$, mass-spectrometry, Si isotopic analysis 0=17679
$(SnF_3)^-$ complexes, evidence of vibra. spectra 1=833
$(SnF_6)^{2-}$ complexes, evidence of vibra. spectra 1=833
Te^+, thermodynamic props. 2=7561
Ti, opacity calcs. 2=15651
Ti, spectrum, in CaF_2, SrF_2, BaF_2, after 2 MeV β irrad., d^1 4=10167
Ti^{3+}, in corundum, e.s.r., theory 3=23237
Tl^-, formation, interaction of electrons with Tl halides 4=18674
Tl^+, in alkali halide crystals, luminescence 2=8561
$(UO_2)^{2+}$, formation in air 2=3771
UO_2^{2+}, U–O bond force const., from $K_3UO_2F_5$ spectrum, i.r. 3=22575
V^{3+}, in corundum, e.s.r. 1=20238
V^{3+}, zero-field splitting in Al_2O_3, pulsed field meas. 1=1270
V^{4+}, in TiO_2, spin-lattice relaxation, 4.2-110°K 4=1891
W^{187}, range in W, 1.6-127 keV 3=14678
Xe-hydrocarbon ions, formation from nuclear decay 3=16183
Xe, ionization of inert gases 0=12578
Xe, range in Cu, Ni, Mo crystal lattices, 5-30 keV 4=19120
Xe^+, sputtering of quartz 1=3026
$Xe^{3+,4+}$ in Ne, charge exchange 2=15891
$Xe^{3+,4+}$ in Ne, charge exchange 3=5630
Xe^{n+}–Ne, and Xe–Ne^{n+} collisions, ionization 2=3718
Xe^{125}, range in monocryst. Si, 5-80 keV 4=22652
Xe^{133}, heavy, channelling in monocryst. Al 4=22642
Xe^{133}, range in Al 3=12608

Ions—contd
- Xe^{133} range in Au 3=12608
- Xe^{133}, range in W and keV energies 3=22876
- Xe^{n+} —Ne, and Xe—Ne^{n+} collisions; ionization 3=2583
- Y, spectrum, in CaF_2, SrF_2, BaF_2, after 2 MeV β irrad., d^1 4=10167
- Yb^{3+}, e.s.r. and optical spectra in CaF_2 0=11938
- Zn, effective charge in Al 2=10416
- Zn II, excited states, mag. resonance in atomic beam 0=17683

recombination
- in air, initial 4=5566
- air, ionized by α-rays, effect on ionization meas. 0=19612
- alkali metal ions 2=5305
- alkali metals, vapours, radiative, calc. 4=15297
- atmosphere, upper, electron—ion, ion—ion, reviews 4=15884
- atmospheric gases, electron-atom collision processes 2=2782
- "auroral afterglow", laboratory scale model 0=2346-7
- bimolecular gaseous ion recombination, rate constants 4=24557
- catalytic probe studies 2=158
- collisional—radiative, survey 4=24558
- dielectronic , and solar corona temp. calc. 4=20930
- in discharge afterglow, review 4=14610
- discharge, glow, high press., and relax. osc., freq. var. 4=14591
- in discharges, glow, cathode at surface, from spectra 4=18722
- electric discharge, r.f., from Balmer spectrum 2=1398
- electron-atomic, in optically thin plasma 2=11620
- electron capture, accidental resonance type 0=8997
- through electron—electron collisions, theory 1=18774
- electron-ion three-body process 2=13543

- electron—ion 3-body recomb. rates, phase space calc. 4=24559

- H, through electron—electron collisions, calc. 1=18774
- H plasma, rates of recombination 2=19935
- H plasma, three-body, spectr. meas. 3=21771
- H^-, charge transfer with H, resonance 2=16492
- H^+, electron capture from $He(1s^2)$, cross-section, calc. 1=7031
- H^+, spectrum, calc., planetary nebulae 4=12351-3
- H_2^+, in inert gases 2=9531
- $H^+ + H(1s)$ electron capture, exact resonance, asympt. form of impulse approx. 4=27487
- $H-H^+-e$ plasma, collisional—radiative, low temp. and density 4=8682
- $H^+ + O$, electron capture 0=8997
- He afterglow, electron energy decay meas. 4=11542
- He, afterglow, very early 3=4065
- He afterglows mech., optical and microwave meas. 4=18693
- He, in dense plasma 2=3029
- He, electron-temp. depend., from afterglow quenching, impurity effects 1=4562
- He ion, electron capture in H_2, He, A, N_2, Kr 3=5631
- He, in a mag. field 1=18775
- He plasma 3=4106
- He plasma, to excited bound states, spectr. study 4=5565
- He plasma, low-temp., in B-1 Stellarator 1=11924
- He plasma, in mag. field 3=14603
- in HeII, liquid, β-irrad. 3=5562
- He II, at supercritical velos. 4=14500
- He^{2+}, charge transfer with H, resonance 2=16492
- $He^{2+} + H(1s)$, electron capture cross-section 0=8997
- in Hg—Ar discharge 3=24236
- I afterglow, recomb. coeffs. 4=27489
- Kr, in discharges at 1.5 mm Hg 0=10882
- Kr^{3+}, electron capture, 6-90 keV, in Kr and Ne 0=8998
- Li^- to F^-, electron affinity calc. 4=25495
- N, afterglow of pulsed d.c. discharge 3=21717
- N, atomic, thermal and radiative props. 3=7443
- N and O, NO formation 3=8264
- N plasma, microwave study 2=22229
- N, recomb. column between ions and electrons 0=14983
- N^+, ^3P state, dielectronic recomb. calc. 2=15889
- N_2, afterglow meas. with 20-30 MeV electrons 4=14579
- N_2, shock-heated, nonequilibrium radiation 2=7566
- NO^+, in upper atmosphere 2=8985
- Ne, afterglow, electron-ion recomb. 4=14597
- Ne, temp. var. 3=24222
- Ne^{3+}, electron capture, 6-90 keV, in Kr and Ne 0=8998
- O in elec. discharges, role of excited molecules 4=21464
- O^-, on exposure to Ag surface 3=18442
- O^+, charge transfer with H, resonance 2=16795
- O^+, $^4S^0$ state, dielectronic recomb. calc. 2=15889

Ions—contd
  recombination—contd
    O^+ and N_2, electron capture 0=8997
    O_2, meas. from plasma density 4=21495
    OH^- and H_3O^+, in flames 2=17786
  scattering
    alkali metal ions, backscattering from metal surfaces rel. to temp. 4=8854
    by atoms, in keV region, cross-section, calc. 1=16441
    by atoms, 1-200 keV, resonant electron capture and stripping 0=13407
    by atoms in solid 4=9818
    at collimator slit, calc. 3=5719
    collision study methods 3=7439
    elastic, differential cross-section calc. 0=7586
    excitation cross-sections, inelastic, heavy ions 2=8010
    50 keV, in gases, deduction of range, charge and straggling, use of ions from radioactive samples 4=24752
    heavy ions by nuclei, elastic, quasi-classical approx. 3=24978
    heavy ions, by P^{206-8}, elastic, at 10.4 MeV/nucleon 2=18362
    heavy, on medium and heavy nuclei 3=15232
    kinetics of ions (K^+, Hg^+) in gases 0=3742
    on metal surfaces, theory 0=19801
    on nuclei, elastic, nuclear surface study 2=3621
    nuclei, elastic, quasiclassical analysis 4=19828

    on nuclei, review, nuclear structure evidence 1=8781
    nucleus, elastic, strong-absorption model 4=22084
    plasma, fast ion relax., Butler—Buckingham rel. to Boltzmann calcs. 4=27512
    secondary ions from light targets bombard. with heavy ions, ang. distrib. 4=8856
    secondary ions from Mo and Ni targets bombard. with Cs^+ and Rb^+, ang. distrib. 4=8856
    Ar, by Cu, graphite, max. 4=19118
    Ar, 30 keV, ang. distrib., on graphite, Cu, W 3=5720
    Ar^+, by (100) faces of Cu, Ni 3=13020
    Ar^+, from metal surfaces, 40-80 keV 4=14766
    A_2^+, in A, rel. to A_2^+ binding energy 2=10237
    C, elastic, by N, at 10 MeV/nucleon, abs. diff. cross-section 1=9886
    C^{12}, on Au^{197} and Bi^{209}, at 10.4 MeV/nucleon ang. distrib. 0=17612
    C^{12}, on C, elastic, rel. to C–C "molecular" states 0=13253
    C^{12}, on C, at 6-29 MeV, resonant elastic scatt. 0=9648
    C^{12}, on C^{12}, elastic, quasi-molecular resonances 1=8784
    C^{12}, by C^{12}, resonant elastic scatt. 1=8782
    C^{12}, on C^{12}, at 10 MeV/a.m.u., diff. cross-section 2=3622
    C^{12}, by O^{16}, resonant elastic scatt. 1=8782
    Cs in weak plasma 4=21497
    Cs^+, bombarding Mo target 2=1524
    Cs^+, on hot Mo 2=20050
    Cs^+, on hot Mo 3=2047
    Cs^+, by Ta and Mo, at 900-2150 eV 0=9107
    Cu single crystals, reflection 4=27565
    F^{19}, on Tb^{159}, elastic, det. of nuclear surface parameters 1=8545
    H, by atoms, 1-200 keV, resonant electron capture and stripping 0=13407
    H, in H and D, collisions, between 6 and 30 keV energies 0=10881
    $H^- + e \rightarrow H + e + e^\pm$, detachment cross sections 4=15302
    H^- ions in O_2, low-energy collision cross-sections 3=4012
    H^+, in A 0=16977
    H^+, on H, resonant electron capture 2=3715
    He, in H and D, collisions, between 6 and 30 keV energies 0=10881
    He, inelastic on O^{16}, 65 MeV, rel. to levels 4=17201
    He, stopping cross-section in hydrocarbon gases 3=22133
    He^+ on H_2, 5-35 keV, rel. to Balmer series excitation cross-section 4=22290
    He^+ by He atoms, electron scatt. 4=19995
    He^+, on He, resonant electron capture, 0.4-25.0 keV 4=5563
    He^+, on He, resonant electron capture, data analysis 4=5564
    He^3, elastic, on Fe^{56}, ang. distrib. 2=18359
    He^3, by He^3, elastic, at 20-29 MeV, calc. 1=3249
    He^3, on He^3, elastic, at 20 and 25 MeV, diff. cross-sections and phase-shift analysis 1=8521

Ions—contd
  scattering—contd
    He^3, on He^4, elastic, at 2-6 MeV, phase-shift analysis, spin polarization calc. 0=1408
    He^3, on Ne 2=1925
    He^3, on O^{16}, elastic, at 1-3 MeV, diff., cross-sections 2=493
    Kr, in Kr gas, with electron capture 0=12590
    Li^+, in CCl_4, derivation by Debye–Ehrenfest theory 2=20049
    Li^+, by inert gas atoms, 7-60 keV 4=3818
    $Li^{7(+)}$, by inert gas atoms, theory 4=6509
    Mo metal, maximum energies of Rb^+ and Cs^+ 3=22854
    N, on A, resonant electron capture and stripping 0=13407
    N, on Al, elastic, at 27.3 MeV 0=11427
    N^{14}, inelastic, by C^{12} at 27.3 MeV, excitation cross-sections 1=732
    N^{14}, on Au^{197} and Bi^{209}, at 10.4 MeV/nucleon ang. distrib. 0=17612
    N^{14}, by Be^9, elastic, at 27.3 MeV 0=1423
    N^{14}, on C and Be, at medium energy, optical model 1=8780
    N^{14}, on C^{12}, at 10 MeV/a.m.u., diff. cross-section 2=3622
    N^{14}, on N^{14}, at 10 MeV/a.m.u., diffr. cross-section 2=3622
    Na^{24}, in Al 1=7106
    Ne, on H and D, collisions, between 6 and 30 keV energies 0=10881
    Ne, in Ne gas, with electron capture 0=12590
    Ne, on Ne and He atoms, He and Xe ions, ejected electron energy distrib. 2=20750
    Ne^+—A, energy transfer at 75 keV 1=5981
    Ne^+, by (100) faces of Cu, Ni 3=13020
    Ne^+ on H_2, 5-35 keV, rel. to Balmer series excitation cross-section 4=22290
    Ne^{20}, on Au^{197} and Bi^{209}, at 10.4 MeV/nucleon ang. distrib. 0=17612
    O, elastic, by He, N, Ne, at 10 MeV/ nucleon, abs. diff. cross-section 1=9886
    O^{16}, from Al^{27}, Au^{197}, C^{12} and Ni, at 158 MeV, elastic 0=2671
    O^{16}, on Au^{197} and Bi^{209}, at 10.4 MeV/nucleon ang. distrib. 0=17612
    O^{16}, by C, Mg and Al, elastic 3=19891
    O^{16}, by O^{16}, resonant elastic scatt. 1=8782
    O^{16}, by O, at 6-29 MeV, resonant elastic scatt. 0=9648
    O^{16}–O^{16}, rel. to nuclear interactions and surface 2=5973
    O^{16}, on Pb^{208}, elastic, det. of nuclear surface parameters 1=8545
    OH^- ions in O_2, low-energy collision cross-sections 3=4012
    Rb^+, on hot Mo 2=20050
    Rb^+, on hot Mo 3=2047

- domain structure, in very pure iron 2=6667
- domain wall thickness 2=13648
- domain walls, 180°, orientation 0=8048
- domain walls, reversible motion, distrib. functions of activation fields 0=6230

Iron—contd
- E.S.D. particles, ang. var. of mag. props 0=10122
- e.s.r., Fe^{3+} in Al ammonium sulphate 4=13321
- e.s.r. of Fe^{3+} in $SrTiO_3$, test of spin Hamiltonian 0=3133
- e.s.r. and optical absorption of Fe^{2+} in cubic fields 0=10228-9
- eddy currents, effect of mag. domains 0=11847
- effect of annealing on dislocations 1=14273
- effect of elastic deform. on magnetostriction 1=3906
- effect of neutron irrad. on crystal structure and hardness 1=3698
- effect of stress on mag. domain walls 1=14710
- effect on tensile props. of α-U, —183° to 350°C 4=28987
- elastic and anelastic yield points, 90-300°K variation 2=23750
- elastic constants, compared to Li, hexamine 4=28358
- elastic constants, pressure depend., up to 10^4 kg/cm^2 2=23733-4
- elastic constants, 3rd order, tabular data 1=2501
- elastic constants, variation with hydrostatic pressure 1=2503
- elastic consts., 4.2-300°K, spin-wave contrib. to specific heat 1=10203
- elastic fatigue limit, stress ageing effects, b.c.c. 4=13417
- elastic limit, var. with strain rate, mechanism 4=4469
- elastic modulus and damping, effect of sintering 2=16945
- elastoplastic waves, prod. by explosion 3=18885
- elastoresistance, of single crystals 2=14491
- electric arcs, thermal equilibrium 1=4582
- elec. cond. 0·38°-4·2°K 3=6560
- elec. conduction through oxide-coated surface 1=1017
- electrical conductivity at high pressures 2=8276
- electrical conductivity, 0.38°–4.2°K 2=16679
- electric conductivity, spin-wave scatt. processes 4=1553
- electric conductivity of strips, 0-30 Mc/s 4=7236
- electrical resistance of hydrogen-charged wires 3=10721
- elec. resistance at low temp., effect of domain structure 4=28529
- elec. resistance and magnetoresist. at low temps., effect of domain 0=2846
- elec. resistivity anisotropy 1=14362
- elec. resistivity and solid-phase transitions 1=17607
- electrical resistivity rel. to temp., 300-1300°K 4=30611
- electrochemical desorption, of adsorbed hydrogen 2=17091
- electrodes, overvoltage and H diffusion through, X-ray study 0=8309
- electrolytic, plastic flow stress, rel. to temp. and strain rate 2=23747
- electrolytically deposited films 0=739
- electron beam deflection in thin films 1=10157
- electron bomb., energy losses, effect of temp. 0=20763
- electron density in 3d-shell 1=20116
- electron density, in 3d-shell 2=3866
- electron diffraction by reflection, rel. to surface 3=18403
- electron energy spectrum 2=16621, 20955
- electron magnetic scattering amplitude 3=1102
- electron—photon showers 4=25884
- electron scattering, energy loss, rel. to phase transf. 3=2040
- electron spin resonance, use in masers 0=2436
- electron states, 3d, two-centre integrals 2=3862
- electronic structure 1=1208
- electrons, d- and f- in crystalline field, X-ray and neutron scatt. on 0=12028
- energy band structure 2=6300
- energy band structure, calc. by APW method 2=10353
- eqns. of state and conduction bands, 10^8 atmos. 3=8372
- equations of state, quantum mech. deriv. 2=20943
- equations of state, quantum mech. deriv. 3=8373
- evaporated films, effect of formation in air on mag. props. 1=10161
- exchange integral sign change 3=980
- exo-electron emission 0=2383
- experimental g' and g values 1=6332
- Faraday effect and mag. domains 1=3822
- fatigue and creep, N and C influence 4=28957
- fatigue limit of strain-aged material 3=8783
- Fermi age of neutrons in iron 0=7369
- Fermi level, shift by mag. field 2=14408

Iron—contd

- ferromagnetic anisotropy, second const. 3=13246
- ferromag.and Curie temp.,crystal lattice size effects 4=26322
- ferromagnetic—paramagnetic transition 4=26304
- ferromagnetic permeability, stress angle effects 4=13185
- ferromag. props. rel. to band structure 3=8665
- ferromagnetic resonance, in colloidal particles 2=18930
- Ferromagnetic resonance, single-crystal films 3=15919
- ferromagnetic saturation moment, pressure effect temp. var. 4=7257
- ferromag. scattering 0=13803
- field emission electrons, polarization 2=5368
- field emission, from saturation mag. Fe, electron polarization 2=7639
- filamentary crystals, surface structure 4=10457
- films, absorption, light, oxidation and wavelength effects 3=17991
- films, adhesion to glass 0=8145
- films, "alternating magnetic induction", Procopiu effect, rel. to torsion 4=4359
- films, on amorph. substrate, fibre orientation 2=17067
- films, b.c.c., ferromag. props., theory 2=16911
- films, Barkhausen effect, rel. to nucleation 2=14783
- films, Barkhausen jump duration 2=21323
- films on Cu, Procopin effect 1=20097
- film on Cu substrate, electron interference study 1=10283
- films, on Cu substrate, mag. props. at low temp. 0=13811
- films, coercive field strength 3=15810
- films, coercive force, duration evaporation 2=2286
- films, columnar structure, internal microstresses 4=26696
- films, complex reproducible refr. index 2=8480
- films, domain boundary electron optical observation 1=10154
- films, domain structure, coercivity 2=16912
- films, domain structure, Faraday effect study 0=13794
- films, domain walls, magnetization vectors 2=21319
- films, easy axis magnetization reversal 3=11087
- films, effect on slip of Ag substrate 0=21113
- films, elec. cond., chemisorption depend. 0=4313
- films, elec. cond. and Hall effect 2=23241
- films, electrodeposited, submicroscopic porosity 2=19108, 23916
- films, electron diffr. rings, contrast, breadths and relative intensities 0=10308
- films, evap., fibre texture and mag. anisotropy 2=8624
- films, evap., induced mag. anisotropy 2=12653
- films, evap. on MgO, domain patterns 2=21325
- films, evaporated onto various substrates, structure 0=4697
- films, ferromagnetic reson., standing modes, k^2 field spacing var. 4=13280
- films, ferromagnetic resonance 0=16150
- films formed in mag. field, anisotropy 1=20103
- films formed in magnetic field, mag. anisotropy 1=2480
- films, induced mag. anisotropy, rel. to residual gas press. 2=4228
- films, investigation using Faraday effect 0=4494
- films, Kr, H$_2$ and O$_2$ sorption 1=1482
- films, longitudinal Kerr magneto-optical effect 3=13157
- films, mag. anisotropy 2=12780
- films, magnetic anisotropy, effect of crucible material 3=18082
- films, magnetic props. 3=20600
- films, mag. structures, electron microscope obs. 2=12784
- films, magnetization distrib. meas. 3=18091
- films, magnetization electron diffraction exam. 0=1799
- films, magnetization jumps, magnitude distrib. 3=20599
- films, magnetoelastic energy 4=22971
- films, monocrystal, growth and mag. props. 1=6318
- films, monocrystalline, domain structure 1=7754
- films, ~ 100A, conductivity, electrical up to 300°C, and activation energy 3=15538
- films, 1500-2000A, large Barkhausen jumps 3=11080
- film, O$_2$ chemisorpt. effect on work function 4=23657
- films, optical absorpt. 2=11488
- films, optical consts. rel. to wavelength 3=10902
- films, optical constants meas. 2=12577

Iron—contd

- films, optical Faraday effect 4=22879
- films, optical, prep. and props. 2=5716
- films, optical props. in air and vacuum 1=17863
- film orientation on Cu substrate, orientation 1=10282
- films, orientation and ordering 0=11861
- films, Procopin and magnetization effects rel. to thickness 3=3109
- films, prod., magnetization and mag. anisotropy 2=8642
- films, saturation mag. Curie temp. 2=23665
- films, single-crystal, Bitter patterns 2=12657
- film, single-crystal, checkerboard domain pattern 2=23662
- films, single-crystal, mag. anisotropy 0=10115
- films, spin-wave resonance 3=3155
- films, stripe magnetic domains, rotatable anisotropy 4=26306
- films, superconductivity, no evidence 3=19109
- films, thickness, composition, uniformity, by X-ray microanalysis 4=2122
- films, transparency increase by blooming 2=7378
- films, uniaxial anisotropy 2=6669
- films, uniaxial mag. anisotropy 1=3895
- films, vacuum evap. from TiC and adhesion to glass 2=6850
- films, very thin, optical refl. and transmission 2=4112
- films, Weiss domain observation 0=4490
- films, work function 2=9612
- flow stress, dependence on impurities 0=15848
- foils, dislocations due to bending 1=8909
- foils, polarization of transmitted electron beams 3=2042
- foils, prep. as isotope targets 2=17978
- foil, recrystallization, X-ray scattering study 1=5107
- fracture, brittle and ductile, in α-Fe 2=10770
- fusion curves up to 96 000 atm, rel. to temp. in earth's core 0=8354
- γ-phase, f.c.c., antiferromagnetism, neutron diffrac. det. 2=21350
- γ-ray absorption 2=5599
- γ-ray backscattering 1=10869
- gamma-ray backscattering, 0.2-2.0 MeV 0=7318
- gamma-ray emission, recoil-free, of Fe^{57}, temp. depend. of energy 0=11313
- γ-ray point sources, Cs^{137} and Co^{60}, scatt. radiation fields 4=6009
- gamma-ray resonant absorption 0=3947-8
- γ-ray scatt., albedo meas., 0.66 MeV 4=19467
- gamma-ray scatt., ang. and energy distrib. 3=14936
- γ-ray scattering, source in contact with Fe 2=1676
- gas-free, H$_2$ permeation, 400-900°C 2=12457
- in glass, magnetic props. rel. to colouring action 1=14684-5
- glowing surfaces, optical pyrometer meas. 0=12537
- grain boundaries 2=8233
- grain boundary absorption, superhigh plasticity 1=14883
- group elements, X-ray spectra, asymmetry in Kα_1 and Kα_2 lines, cause 3=8184
- gyromagnetic ratio, weakly magnetized sample 0=11924
- Hall effect in crystals containing impurities 1=10031
- Hall effect and magnetoresistance, anomalous, localized d- electron model 3=827
- Hall effect in single cryst. and polycryst. 3=2853
- Hall effect, temp. dependence to 4.2°K 0=6075
- hardness, effect of crystal props. and grain substructure 2=23791
- heat capacity, 940°–1937°C, γ and δ liquid phases 2=12383
- heat of fusion, of δ- and γ-forms 2=7479
- heating to ~ 1000°C, ultrasonic, effects on structure 4=11398
- high-purity, recrystallization kinetics 4=15761
- hydro-extruded, mech. props. variation 3=1215
- impurities of C and N, ageing 1=8905
- impurities in Cu–Ni alloys, Mössbauer effect 1=11586
- impurities in MgO, cause of thermoluminescence 0=11795
- infiltration by liquid metals and alloys 4=8144
- interactions with 10^{11}-10^{13} eV particles 1=3271
- internal field, temp. depend., using Mössbauer effect 1=1210
- internal friction 0=1845
- internal friction, anelasticity produced by plastic deformation (4.2-300°K) 0=10258

Iron—contd
internal friction, cold-worked metal 2=21407
internal friction, cold-worked and quenched specimens, theory 1=3963
internal friction and crystal dislocation 4=28958
internal friction, damping by grain boundaries 2=4313
internal friction, elastic modulus and dislocation damping 2=21405
internal friction, at low temp. 0=695
internal friction at low temp. 4=20660
internal friction, meas., study of magnetization processes 0=11873
internal friction, 0°-400°C at 1 c/s 3=23287
internal friction peak, 250°C 3=8756
internal friction peaks rel. to localized defects 4=26513
internal friction, sintered and plastically deformed spec., temp. depend. 1=9084-5
internal friction, 250°C, due to dissolved oxygen or not 3=23300
interstitial C and N, segregation of C and N to dislocations 4=17427
ionization, by heating at 116 000°K and exp. in vacuum 0=14958
ions, activated, diffusion in Cu 2=18497
ions, e. s. r. in MgO, $\Delta M = 2$ lineshapes model 4=13320
ions, Fe IV, energy levels and transition probabilities 0=20541
ions, Fe group impurities in MgO, electron transfers, e.s.r. study 0=21075
ions, Fe$^-$, discovery 0=2320
ions, Fe$^+$, e.s.r. in NaF 0=21076
ions, Fe^{2+}, e.s.r. in MgO, phonon absorpt. 2=10699
ions, Fe^{2+}, e.s.r. in ZnSiF$_6$.6H$_2$O 2=16932
ions, Fe^{2+}, energy states in FeCl$_2$ 2=12397
ions, Fe^{2+}, Fe^{3+}, in water, electron transfer theory 3=14178
ions, Fe^{2+}, in oxides, paramag. suscept. 2=18892
ions, Fe^{2+}, Sternheimer factors, variational calc. 3=2567
ions, Fe^{2+}, in tetrahedral sites, Jahn—Teller distortions 4=15406
ions, Fe^{3+}, acoustic e.s.r. 4=1867
ions, Fe^{3+}, antishielding factor. calc. 1=795
ions, Fe^{3+}, e. s. r. in calcite, isotopic shift in h. f. s. 4=13322
ions, Fe^{3+}, e.s.r., in corundum, temp. depend. 2=768
ions, Fe^{3+}, e. s. r. in cubic SrTiO$_3$, temp. and press. depend. 4=10325
ions, Fe^{3+}, e.s.r. in MgO, pressure effects 1=7786
ions, Fe^{3+}, e.s.r. in strong axial field of PbTiO$_3$ 4=20595
ions, Fe^{3+}, ground-state cubic crystal field splitting parameter, sign 0=1824
ions, Fe^{3+}, mag. props. in dilute systems 0=8084
ions, Fe^{3+}, maser action in TiO$_2$ 2=1583
ions, Fe^{3+}, in methylamine alum, zero-field e.s.r. 2=770
ions, Fe^{3+} in sapphire, spin Hamiltonian 2=8670
ions, Fe^{3+}, in spinel lattices, paramag. resonances 2=769
ions, Fe^{13+}, ground and excited states, self-consistent field 0=20542
ions, polyatomic, up to Fe$_3^+$, rel. abundances 2=9533
ions, self-ionization and spectra in stars, nebulae and solar corona 0=846
ions, trivalent, in molten silicates + Fe$_2$O$_3$, coordination 4=2654
iron group impurity e.s.r. in CaO 4=26405
iron group ions in tetrahedral coordination, electronic structure and e. s. r. 4=25903
ironmaking, automatic control, conference 2=15073
irradiated, C precipitation 2=15070
irradiation effects, study using mag. props. 2=21084
isomeric shift, Fe^{57} γ-rays, due to lattice compression effects 2=10305
isomeric shift, in Mössbauer effect 2=20909
K absorpt. edge for β, γ, δ iron 3=15691
Kβ_5 X-ray emission band 3=10976
lattice frequ. spectrum, Born—von Karman model 4=20184
lattice parameters and volume, effect of press. 4=29136
lattice stability of b.c.c. and f.c.c 3=13523
layers on Cu, outward growth, electrolytic 4=4531
liquid, critical consts., calc. from quasi-f.c.c. lattice model with vacancies 1=1739

Iron—contd
liquid, diffusion of Si, S and Mn 1=1738
liquid, surface tension, contact angle, var. with P, S content, 1560°C 3=11775
liquid, viscosity 3=14115
in magnesium, spectral determination, effect of Mg structure 2=19173
magnetic after-effect, due to impurity atoms 2=4222
magnetic after-effect meas. up to 750°C 4=17653
magnetic after-effect due to motion of dislocations 0=13820
magnetic after-effect in pure, doped and neutron irrad. samples 4=1832
magnetic anisotropy 0=13772
magnetic anisotropy, and Bloch wall mobility, interstitially dissolved C and N 0=13773
magnetic anisotropy of films 1=14719
magnetic anisotropy, low-temp. dependence, Zener's theory 0=1784
magnetic anisotropy of wires under small torsion 3=20577
magnetic axis, determ. by electron diffraction 2=14796
magnetic crit. temp., neutron scatt. 4=13187
magnetic "drag band", rel. to neutron irradiation 3=8469
use for magnetic electron-microscope lenses 3=2037
mag. field, internal, meas. by n.m.r. 1=17949
magnetic field, local, at impurity Fe^{57} nuclei, using Mössbauer effect 0=11826
magnetic field at nucleus, contrib. of exchange polarization of core electrons 1=3628
mag. field at nucleus, by Sn^{119} Mössbauer effect 1=10961
magnetic field at nucleus, contrib. of Fermi contact term 1=3629
mag. field at polarized Co^{57} nuclei, Mössbauer effect 1=8877
magnetic film anisotropy, domain rotation obs. 4=26321
magnetic films, anisotropy and coercive force, var. incidence angle 4=28808
magnetic films, mag. ripple formation mechanism 4=13160
magnetic hysteresis loops, eddy-current broadening 3=15790
magnetic initial suscept. just above Curie temp. 4=13186
magnetic interaction domains in ESD compact 1=3398
magnetic internal field, Au^{197} Mössbauer data 3=6458
magnetic properties, defects, γ-irrad. 2=8628
magnetic properties, depend. on crystal alignment 0=11993
magnetic properties, effect of neutron irrad. 0=18189
magnetic props, effects of proton irradiation 3=15863
magnetic props., grain-size and demag. depend., square-loop hysteresis 1=3887
magnetic props, neutron effects, very pure 3=23179
magnetic props., proton irrad. effects, recovery 4=17643
magnetic saturation induction, charged with H 3=6703
mag. saturation induction, increase by H absorption 3=1145
magnetic scattering, of polarized neutrons 0=4492
magnetic sheets, eddy-current losses meas. 4=13164
magnetic sp. ht., effect of elastic modulus relaxation 4=25856
magnetic susceptibility at γ/d and melting point 3=8654
mag. susceptibility, 1000°C 3=15785
magnetic viscosity, due to C atoms dislocations 0=1803
magnetism, electronic model 1=20039
magnetism of particles, surface-to-bulk induction, by electron diffr. 1=17964
magnetization, deviations from $T^{3/2}$ law, meas. and spin-wave theory 4=7274
magnetization, exchange parameters, 4.2-70°K 4=20545
magnetization, field calc. 0=13778
magnetization of films 7-142A thick 4=7265
magnetization, fluctuation dynamics, near Curie pt. 0=13804
magnetization, intrinsic, press. depend. 3=6700
magnetization, intrinsic, under high pressure 2=14771
magnetization meas. near saturation in polycrystals 0=13807
magnetization process, in 25-120 μ films 2=8635
magnetization spontaneous moment rel. to temp., 1.4° to 5°K 3=15792
magnetization of wire and effect of torsion 1=6282
magnetized, electron beam deflection on passing through edge 0=4475
magneto-acoustic properties 2=12379

Iron—contd
magnetocrystalline anisotropy rel. to field strength 3=20581
magnetoelastic damping in zone-melted Fe 4=26303
magneto-optical const., u.v., i.r. and visible regions 0=6171-3
magneto-optical effects rel. to optical consts. 3=10918
magneto-optical, γ-ray polarization rot. near Mossbauer absorpt. 4=17571
magneto-optical and optical props., i.r. 3=10919
magneto-optical reflectivity change on magnetization reversal 4=22871
magnetoresistance, longitud., in single crystals 4=1563
magnetoresistance, temp. var. 4=22982
magnetostriction constants 0=3067
magnetostriction constants, meas. and calc. 4=28809
magnetostriction constants, temp. dependence 0=21049
magnetothermal effects 0=4487
magnets made of elongated particles 1=6341
martensite—ferrite transition, thermodynamics 3=5120-3
martensite, in foils, by optical microscopy 3=8890
mechanical ductility improvement by low-temp. precompression 4=17732
mechanical prop. improvement by adding dispersing particles 4=17733
mechanical properties, rel. to fast neutron irrad., 4° to 300°K 3=8759
mechanical (tensile) props., effects of C, N, Mu up to 500°C 4=26515
metal, 3d electrons config. 3=4833
meteorite, magnetic props. 1=5140
meteorite, magnetic props. 1=10384
meteoritic, thermal properties 3=11526
micro crack stability, effect of hydrogen 1=2517
microhardness rel. to applied load 4=17743
microstresses, due to plastic deformation 0=10263
microtwins and microcracks in Fe deformed at −196°C 4=20719
molar extinction coefficient, in H_2O and D_2O 2=13344
molten, surface tension rel. to N_2, and N_2 adsorption 4=21111
monocrystals, dislocation distribution by etch method 3=15498
monocrystals, orientation and magnetization 1=1215
mosaic structure 4=26695
mosaic structure, after recovery and recrystalliation 2=21049
Mössbauer effect 0=9524
Mössbauer effect in embedded Au^{197} 1=11147
Mössbauer effect, Fe^{57} in Au, temp. var. 4=15401
Mössbauer effect of Fe^{57} for press. up to 240 kbar 4=28327
Mössbauer effect, Fe^{57} steel, 14 keV, var. velo., thicknesses, angle 4=17334
Mössbauer effect, Fe^{57}, temp. var. near Curie point, and mag. internal field 4=13190
Mössbauer effect, in foil, rel. to temp. 0=5663
Mössbauer effect in InAs, isomer shift 4=1346
Mössbauer effect in metallic Fe, 4-1300°K 3=6457
Mössbauer spectrum of Fe^{57} at high pressures 4=9814
motoelectric effect, temp. depend. 2=8923
μ-meson scatt. in 18 in. sample, analysis 3=10138
n.m.r., and Bloch wall thermal movements 2=10716
n.m.r., of dispersion in polystyrene 2=14850
n.m.r., Fe^{57} 2=785
n.m.r., Fe^{57} in α-Fe_2O_3 2=21387
n.m.r. of Fe^{57}, fast-passage effect analysis 4=28898
n.m.r., longitudinal, model and expt. 3=3197
n.m.r. of powder, effect of external mag. field 3=1203
n.m. relax. rate theory and internal mag. field 4=23062
Néel temperature, f.c.c. phase, determ. using Mössbauer effect 3=23153
neutral atom, absorption spectra shift due to He 1=8813
neutron attenuation, in iron-water shields, calc. 2=20712
neutron backscattering from reflectors, Monte Carlo calc. 4=21860
neutron bombarded, strengthening 4=23165
neutron damage, electron microscopic obs. 3=8477
neutron diffraction intensities, effects of simultaneous reflections 4=23411

Iron—contd
neutron diffraction pattern, effect of moving lattices 4=13576
neutron form factors; spin density distrib., Hartree—Fock calc. 3=1103
neutron irradiated, diffusion magnetic viscosity 1=1227
neutron irradiated effect on mech. props. 0=7905
neutron irrad., relaxation strains 3=20717
neutron irradiated, resistivity 0=20864
neutron irradiated, stored energy 4=4098
neutron irradiated, structure 0=1917
neutron irrad., to 10 MeV, primary damage state 4=22649
neutron irradiation effects, hardness, elec. cond., lattice parameter 4=28509
neutron irrad. effects on physical properties 1=10021
neutron nonelastic scattering cross-sections 4=3676
neutron radiation damage effect on mag. props. 1=14730
neutron scatt., inelastic, critical 3=3120
neutron scatt., polarized, spin wave theory 3=6717
neutron small-angle scatt. by spin waves, theory confirmed 0=13805
neutron spectrum, spherical and slab cases, 3 and 15 MeV 4=30233
in nonmagnetic matrices, dilute soln., mag. props. 2=12683
nuclear mag. resonance of Fe^{57} in own field 0=13892
nuclear mag. resonance, up to 65 000 atm 3=11123
nuclear polarization of dissolved Mn^{54} 3=17636
nuclear transitions, meas. from γ-ray spectrum after Fe + n 4=12133
nuclear Zeeman effect of Au^{197} rel. to mag. field 4=9811
old, shield for low-activity counting 0=11074
optical constants, meas. 2=16802
oscillator strengths of neutral atom 0=20590
oxidation, interface defects 2=12440
oxidation, interface impurity content, direct obs. 2=23162
oxidation by O_2 and water vapour, rel. to imperfections, electron microscope study 1=4077
oxidation and reduction, using gas reactor for transmission electron microscopy 4=29220
oxidation, study diffusion of O by inert markers 0=17968-9
oxidation to wüstite, reaction rate transition 4=10635
oxide growths, rel. to surrounding gas 3=18433
paramag. resonance, Fe^{3+} in MgO, cubic field splitting, pressure depend. 0=18218
paramag. resonance, Fe^{3+} in TiO_2 (rutile), at low temp. 0=11951
paramagnetic resonance linewidth, above Curie pt., theory 2=4259
paramag. resonance, and optical spectrum of Fe^{3+} in beryl 0=16169
paramag. susceptibility 0=11809
paramagnetism, Fe impurities in transition metals, by Mossbauer effect 2=21294
particle size in Hg 2=15529
particle size and lattice distortions, effect of cold pressing, by X-ray reflections 3=18401
particles, in Hg, coercivity, effect of other metals 3=15773
particles in Hg, mag. effects of Sn adsorption 2=15614
particles, impact at v. high velocities 0=11989
particles, one-domain, mag. props. 3=11088
particles, 25-2000 A, coercive force and remanance 0=10133
permeation rates of H_2 and D_2 3=22815
phase transformation, α-γ, detection by differential thermal cond. anal. 0=14043
phase transformations, α—γ, γ—δ, wires, and plastic deformation, irreversible 3=23471-2
phase transformation, b.c.c. to h.c.p., at 130 kbar, room temp., X-ray diffr. study 4=30802
phase transformation, γ—α change point, meas. 0=14572
phase transformation, martensitic, on rapid quenching 4=13495
phase transformations, shock-induced, temp. depend. 2=6821
phonon dispersion, meas. 2=10325
phonon frequ. distrib. of α-phase 3=22641
phonon-magnon interaction, calc. 2=16882
plastic deform. and annealing, intercrystal. slip 4=13432

Iron—contd
- plastic deformation of α-Fe single crystals, preferential surface effect 1=14878
- plastic deformation, effect on mosaic structure 0=16229
- plastic deformation, and fracture (4.2-77°K) 0=8118
- plastic deformation, initiation by twinning 2=10756
- plastic deformation, polycrystalline specimens 2=12853, 14881
- plastic deformation of single crystals 1=20350

- whiskers, electron diffraction examination 4=7570
- whiskers, electron interferometer study 1=11548
- whiskers, ferromag. nucleation sources 1=11426
- whiskers, ferromag. resonance 0=3114
- whiskers, growth 0=3185
- whiskers, growth by chem. transport 3=5090
- whiskers, growth from double spiral source 0=6334
- whiskers, growth from H_2-reduced $FeCl_2$ 0=3184
- whiskers growth, influence of elec. field 1=20447
- whiskers, growth and nucleation sites, by oxide replica technique 4=2036
- whiskers, growth pyramid form. on surface 4=29064
- whiskers growth by vapour reduction 3=18277
- whiskers, Kerr method observation of domain structures 1=6303
- whiskers, magnetization reversal, nucleation rel. to surface defects 4=7261
- whiskers, orientation and oxidation 3=23412
- whiskers, resistance to oxidation 2=12960
- whiskers, surface topography, effect of H_2-reduction and etching 1=4030
- whiskers, torsional plasticity, 20°K to room temp. 3=8763
- whiskers, by vapour deposition 2=8798
- white layers, structure 4=13653
- wires, internal friction, ageing 3=13333
- wires, oscillation damping due to dislocations, effect of O and Si solute atoms 0=21101
- wires, permanent magnets obtained by drawing compacts of parallel wires 0=15107

Iron—contd

- wires, plastic deformation and internal friction 1=14854
- wires, stressed, magnetization in a.c. field 0=679
- work function, absorbed F reduction effect 4=19075
- work function, of surfaces cleaned in vacuum 0=2373
- work function, var. O, press. and temp. 4=19076
- work hardened, strongly, very pure, microheterogeneities 4=13650
- X-ray absorption, K-edge in antiferromagnetics and ferrites 0=672
- X-ray absorption, K-edge, and electron gas vibrations 0=1738
- X-ray atomic scatt. factor, abs. meas. 1=7433
- X-ray atomic scatt. factor and electron density 4=13591
- X-ray diffraction study, high-press. 2=8811
- X-ray emission $K\alpha_{3,4}$ lines 0=20735
- X-ray K-absorption edge 2=10609, 17030
- X-ray spectra, Kα centroid wavelengths 4=15771
- X-ray spectrum, K-absorption spectrum, fine structure, effect of W impurities 3=8608
- yield and flow stress of electrolytic iron 1=20352
- yield and flow stress, rel. to grain size 3=11149
- yield and flow stress, temp. effect 0=21109
- yield model, dislocation multiplication 2=16952
- yield plateau after deformation ageing 1=6455
- yield point rel. to temp. and dislocation—intrusion atom interaction 3=5065
- yield points, by reapplication of load at low temp. 3=11150
- yield points and transient creeps 3=15992
- yield stress, effect of Lüders front number 2=10757
- yield stress, polycrystalline specimens, effect of disloc. locking 4=10383
- yield stress, thermal activation 2=10743
- yield and work hardening, neutron effects 3=11168
- zone-melted, coercive force 1=10144
- zone-melted, directional ordering effects 1=6447
- zone-melted, effect of directional ordering on damping 0=10167
- zone refined, C added, mag. props. 2=12764
- zone structure, rel. to mag. and thermoelec. props. 1=19914
- C diffusion in, grain-size effects 1=3683
- C impurites, pressure influence on time of stay 1=6118
- Fe particles <100 A diam., saturation magnetization 1=6308
- Fe single-domain particles prep. by borohydride reduction 1=6305
- α–Fe containing N, quench-aged, strain ageing 1=20611
- α-Fe, creep at low temp. 4=17731
- α-Fe, diff. of Au, Co, Ni, effect of ferromagnetism 3=22810
- α-Fe, dislocations, shock wave induced 3=4872
- α-Fe, electron microcharacteristics meas., by optical constants 3=15467
- αFe, incubation creep effect 4=1946
- α-Fe, interactions between glide dislociations in double pile-up 1=2510
- α-Fe, internal friction due to H and D 1=14305
- α-Fe, kinetics of recovery and recrystallization 3=23484
- α- and γ-Fe, mag. symmetry near Curie point, with total moment $\neq 0$ 4=22966
- α-Fe moving edge dislocations 3=10654
- α-Fe, precip. of C rel. to kinetics in alloys 4=23246
- α-Fe, self-diffusion in large temp. gradient 1=2393
- α-Fe single crystal growth by halogen reduction 1=15006
- α-Fe, solute adsorption of sulphur at grain boundaries 1=3690-1
- α-Fe, stress relaxation at low temp. 1=20318
- α-Fe, thermoelec. props., lattice binding forces 3=2984
- α-Fe, X-ray diffraction intensities, effect of temp. 1=4042
- δ-Fe, diff. of Co^{60} and Fe^{59} 3=22811
- Fe I, arc spectrum, faint lines 1=4904
- Fe I atomic absorption spectra in presence of A 1=17265
- FeI lines, growth curves, in solar spectrum 4=23911
- Fe II, d^6 p config. 1=806

- Fe XVI and Fe XV, multiplet strengths for transitions 4=25500

Iron—contd
- Fe^0 atom embedded in Si, e.s.r. 3=20639
- Fe^0 and Fe^+ paramagnetic resonance in interstitial Si 1=20214-15
- Fe^{++}, Jahn-Teller effect 1=6389
- Fe^{2+}, antishielding of mag. and elec. hyperfine interact. 3=25038
- Fe^{2+} ion, e.s.r. in CaO 4=17678
- Fe^{2+} e.s.r. in MgO, stress effects 4=30736
- Fe^{2+}, e.s.r. in MgO, virtual phonon effects 4=23046
- Fe^{2+} in MgO, u.s. pulse interaction with spin resonance 4=26415
- Fe^{3+} in cubic cryst. field, ground state splitting 4=25827
- Fe^{3+} in cubic crystal field, optical spectrum and ground-state splitting 4=20463
- Fe^{3+}, e.p.r., in Al_2O_3, 2-80° K, 3 cm 3=20649
- Fe^{3+}, e.s.r., in corundum, temp. depend. 3=5039
- Fe^{3+}, e.s.r. and spin Hamiltonian in $CdWO_4$ 3=5040
- Fe^{3+} e.s.r. in AgCl 4=13324
- Fe^{3+}, e.s.r. in α-Al_2O_3, appd elec. fld effect 4=26406
- Fe^{3+} e.s.r. in $BaTiO_3$, at low temp. 4=7329
- Fe^{3+}, e.s.r. in CaO 3=3181
- Fe^{3+}, e.s.r., in Fe—Rb alum, rutile and $K_3CO(CN)_6$ 4=20594
- Fe^{3+} in $K_3Co(CN)_6$, paramagnetic relaxation from 0.1° to 4.2°K 4=26407
- Fe^{3+} e.s.r. in $Li_{0.5}Al_{2.5}[Ga_{2.5}]O_4$ 4=26404
- Fe^{3+} e.s.r. in $ZuWO_4$ 4=30734
- Fe^{3+}, energy levels calc. in Al_2O_3 4=1356
- Fe^{3+}, g-factors from crystal field theory 4=25825
- Fe^{3+} ion, in corundum, transition matrix elements, calc. 3=23230
- Fe^{3+}, line broadening of P^{31} n.m.r. absorpt. in H_3PO_4 3=13316
- Fe^{3+}, in paramag. salts, S-state, relax. time 1=3927
- Fe^{3+}, paramagnetic resonance spectrum, at room temp. 3=25571
- Fe^{3+}, quadrupole antishielding factor 3=12772
- Fe^{57} impurity in supercond. In, Mössbauer resonance 1=19693
- Fe^{57} in inorganic glasses, Mössbauer absorption 4=20168
- Fe^{57} interaction with crystalline surroundings, 300° to 77° K 4=12587
- Fe^{57} in iron, n.m.r. pressure and temp. dependence 1=6432
- Fe^{57} isomer shift calibration improvement 4=20163
- Fe^{57} isomeric displacement, interpretation 3=7972
- Fe^{57} Mössbauer effect, applications to magnetism 1=6249
- Fe^{57} Mössbauer effect, in graphite, rel. to binding anisotropy 4=12586
- Fe^{57} Mössbauer effect at η Al_2O_3 surface, 4=25816
- Fe^{57}, n.m.r. in Fe_3O_4, temp. dependence 3=8734
- Fe^{57} N.M.R. in local field of metallic Fe 1=11495
- Fe^{57}, n.m.r. in unenriched Fe 1=6433
- Fe^{57} in Fe and Cu, Mössbauer effect, 20° to 850° C 4=12584
- Fe^{59} self-diffused in γ-Ge, grain size effect, radioactive tracer, coeff. meas. 4=30581
- in Se as trace element, neutron activation chem. anal. 4=23692

- mumetal-type alloys, ferromag. reson., in Gorter's normal field 2=23694
- nitrides, mag. and crystallographic props. 0=11830
- oxide film on monocrystals, orientation 1=1215
- oxides, ferrimagnetic, hexagonal, anisotropy 0=10179
- oxides, formation on thin Fe films 0=4697
- oxides, saturat. magnetization reduction by neutron irradiation 0=3008
- paramagnetic susceptiblity rel. to temperature 3=13231
- pearlite–α-iron and ferrite, phase change meas. at high press. 0=1926
- Permalloy, complex permeability of tapes 3=15854
- Permalloy films, domain structure obs. 2=18907
- Permalloy films, domain wall creeping 2=12773
- Permalloy films, evaporation system and magnetic properties 4=20548
- Permalloy films, ferromag. resonance 2=10685
- Permalloy films, ferromagnetic resonance meas. at low bias field 4=10307
- Permalloy films, mag. anistropy meas. 2=12775
- Permalloy films, magnetization reversal, along hard direction 4=10283
- Permalloy films, prep. by cathodic sputtering 4=13676
- permalloy, film, resonance linewidth and anisotropy, var. 3=13257
- Permalloy films, standing spin waves at r.f. and u.h.f. 4=20575
- Permalloy films, structure and mag. props. relationships 4=15640
- Permalloy films, structure and switching 4=26327
- Permalloy, film, uniaxial, magnetic fine structure 4=26324
- Permalloy, intial permeability, γ-ray effects 2=8617
- Permalloy, magnetic props., rel. to composition 4=15649
- Permalloy, magnetostriction, effect of prep. 2=14793
- Permalloy 66, internal friction, due to ordering 3=11137
- pyrite, elastic consts 3=23280
- pyrite, Madelung const. 2=20901
- pyrites, triglyph, crystal distrib. of trace elements 4=30822
- pyrrhotite, mag. props. at low temps. 2=14809
- pyrrhotite, remanent mag., field depend. 3=11063
- pyrrhotite, thermal expansion and mag. props. 0=13818
- rare-earth garnets, far i.r. spectra and ferrimag. resonance 3=8597
- salts of Fe group, paramag. anisotropy, theory 0=21021
- Sendust, sheet processing and mag. props. 4=13222
- siderite, Fe^{2+}, mag. anisotropy 0=21025
- silicides, specific heat, temp. depend., 55-300° K 3=8360
- silicon iron single crystal disc, coercive force theory 1=10141
- silicon iron, single crystals, temperature magnetic hysteresis 1=10148
- solid solutions N and C clustering 3=22759
- solutions, aqueous, Fe^{3+} ion hydration 0=14123
- Tutton's salts, water of cryst., proton–proton vector orientations 4=10450
- Vicalloy II, mag. hardness and internal stresses 3=1139
- Vicalloy II, magnetization anisotropy in strips and small coercivity 4=23010
- Vicalloy II type Fe—Co perm. magnet alloys, props. 1=6343
- wüstite disintegration, kinetics, study by mag. analysis, and mechanism 4=23268
- wüstite, metastable triple point 4=20710

Iron compounds—contd

wüstite, phase transformation, second order, from thermodynamics 4=26742
Cu—Fe mixed whiskers, metallography 3=20796
Cu—Mn ferrite, saturation magnetization rel. to structure 1=20131
Fe—Ni, high pressure antenite—martensite phase transitions 4=23267
Cu—Ni—Fe, magnetic hysteresis a.c. integrals, residual to saturation mag., ang. var 3=25526
Fe—Pt alloys, Pt enriched, mag. props. 0=13766
Fe, with Al, Ni, S, Si, diffusion, effect of phase transform 0=8268
Fe alloyed to: Mn, Cr and Va, mag. moments, disorder, neutron diffn. study 4=28817
Fe alloys, crystal mag. field at In^{114}, Re^{186}, Ir^{192} from β asymmetry at 0.1°K 4=20157
Fe alloys, dilute, crystal internal induced mag. field 4=30496
Fe alloys, effect of neutron irrad. on crystal structure and hardness 1=3698
Fe alloys, dilute, effect of second component on Hall effect and elec. cond. 1=6128
Fe alloys, exchange interaction, Mössbauer study 4=12602
Fe alloys, fatigue and creep, N and C influence 4=28957
Fe alloys, fatigue fracture, experimental values 0=1870
Fe alloys, Fe^{57} hyperfine fields 4=12559
Fe alloys, internal mag. field, meas. by n.m.r. 1=17949
Fe alloys, magnetic anisotropy and magnetostriction 0=10126
Fe alloys, phase transforms., liquidus—solidus curves 4=24430
Fe alloys, with polarized Sc^{47} nucleus, γ-ray asymmetry, effective mag. field 0=20787
Fe alloys, precipitation and deform. damping peak 4=28962
Fe alloys, radiation effects on mag. props. 0=2994
Fe alloys with Si, Ge, and Sn, specific ht. 4=30520

Fe alloys, Si and P content, spectrochem. anal. 0=14828
Fe alloys, thin-film martensite transformation 0=21209
Fe alloys, vaporization, 760°-980°C, 5×10^{-7} to 10^{-9} torr 4=18500
Fe alloys, wires, oscillation damping due to dislocation, effect of O and Si solute atoms 0=21101
Fe amalgam, mag. props. correl. with grain dimensions 0=13764
Fe ammonium alum, mag. susceptibility 1=12522
Fe-base alloys, mech., elec. and elastic props. rel. to Co and Ni content 4=17736
Fe carbides, phase transformations, 350°-550°C 4=7499
Fe carbonyls, Fe^{57} Mössbauer analysis 2=18245
Fe chromium boride, crystal structure 4=26651
Fe complexes with Fe at centre of 4N square, e.s.r., and MO calc, 1=873
Fe complexes, Mössbauer spectra 2=14235
Fe complexes, nuc. quadrupole interact 3=12905
Fe dihalides, linear symmetrical, mean of vibr. and Bastiansen—Morino shrinkage effect 4=30441
Fe ferrite, proeutectoid, growth in ternary Fe—C—Mn
Fe ferrites, single crystal growth 1=7847
Fe garnets, rare earth—Fe anisotropic exchange interaction 4=22469
Fe—graphite solid solutions, phase boundaries in eutectoid part of equilib. diagram, rel. to pressure 4=23238
Fe halide complexes, tetrahedral, spectra 3=15354
Fe Laves phases, Mössbauer effect 2=3816
Fe mineral compounds, spectral fine struct. in Mössbauer effect 4=28329
ϵ Fe nitride, magnetic props. 4=26311
Fe orthosilicates, mag. props. 77°-300°K 3=23142
Fe oxide catalysts, with alkali metals, positive-ion emission, mass-spectrometric study 3=21891
Fe oxide films on Fe single crystals, electron diffraction study 4=26711
Fe oxide films, layer structure 3=20928
Fe oxides, crystals, morphological forms 2=12881
Fe oxides, elec. cond. rel. to Fe/O radio, mechanism 2=10490
Fe oxides, Mössbauer study of isomer shifts, quadrupole interaction and hyperfine field 2=6663
Fe oxides, remanent magnetization, pres. effects 3=23156

Iron compounds—contd

Fe oxides, semicond. glasses, structure 4=2137
Fe-rare earths, field at nucleus, expt. and theory 2=10300
Fe-rich alloys, liq.—solid and δ—γ equils. 3=13526
Fe silicates, Mössbauer effect 3=8341
Fe silicides, heat capacity and enthalpy, 55-1925°K 4=12647
Fe silicides, 3d-electrons of Fe, effect on bonds 3=20041
Fe sulphide, mag. susceptibility, temp. anomaly 0=668
Fe telluride, Hall effect measurement 1=12418
Fe tetracarbonyl complexes, Mössbauer study 4=6625
Fe—transition metal dilute alloys, magnetostriction, 4° - 300°K 3=1045
Fe^{2+} hydrated salts, paramag. behaviour 3=6691
Fe^{2+} ions, scattering of neutrons, in FeO 1=12523
Fe^{3+}-containing crystals, absorpt. spectra 3=15681
Fe^{57}, in FeF$_2$, h.f.s. in paramag. and antiferomag. states, from Mössbauer effect 1=1197
Fe^{57} in spinel type oxides, nucl. quadrupole interaction 4=3963
Fe—Al alloys, elastic and plastic props. rel. to quenching temp. 2=6715
Fe—Al alloy, electronic specific heat, low temp., composition effect, calc. 4=28370
Fe—3% Al alloy, magnetic texture and other props. of sheets 3=15855
Fe—Al alloys, from Al diffused into ferrous alloys 2=17051
Fe—Al alloys, effect of atomic ordering on mag. props. 4=13117
Fe—Al alloys, electro-diffusion of components, radioactive tracer study 4=25968
Fe—Al alloys, ferromag. behaviour, rel. to demag. method 2=10648
Fe—Al alloys, induced mag. anisotropy 2=8620
Fe—Al alloys, induced magnetic anisotropy, annealed at 580° C 4=7258
Fe—Al alloys, internal friction 2=21401
Fe—Al alloys, internal mag. fields and saturation magnetization 3=15734
Fe—Al alloys, lattice consts. meas. rel. to temp. 2=17003
Fe—Al alloys, mag. props. 2=2279
Fe—Al alloys, mag. props., rel. to ordering process 2=16902
Fe-Al alloys, ordering rel. to yielding 4=28959
Fe—Al alloys, oxidation, around Curie point 3=11337
Fe—Al alloys, in paramag. range, ordering 2=23635
Fe—Al alloys, reptation and bascule effect 2=4333
Fe—Al alloys, single crystals, ordering, precipitation, mag. props. 2=14770
Fe—Al alloys, specific heat, low temp. 4=25857
Fe—Al alloys, thermodynamic props 4=15441
Fe—Al alloys, X-ray exam., microstructure 4=23529
Fe—Al crystals, field induced mag. anisotropy 1=10138
Fe—Al (0-50 at %), crystal internal mag. field at Fe^{57} 4=12562
Fe—Al, elastic props., rel. to atomic order and ferromag. 3=25605
Fe—Al, elec. resist., rel. to short-range order 1=19828
Fe—Al, electrical resistance 0=20867
Fe—Al films, evaporated, mag. anisotropy and Al source position 3=18084
Fe—Al, interatomic bond forces 0=1934
Fe—Al, iron-rich, slip system 4=6854
Fe—Al, "K-state" and order data 3=23467
Fe—Al, long-range order, thermoelec. power 1=20592
Fe—Al, mag. anisotropy induced by cold rolling 1=7746
Fe—Al, mag. anisotropy induced by mag. or stress annealing 1=6280
Fe—Al, mag. viscosity due to solute atom pairs 1=9033
Fe—Al, magnetic field, local Mössbauer obs. 4=12564
Fe—Al, magnetic props., effect of heat treatment 1=11435
Fe—Al, magnetization 0=677
Fe—Al, mechanical strength 3=6798
Fe—Al, ordering, atomic configs., theory 3=6871
Fe—Al, ordering kinetics 3=3327
Fe—Al, reptation and bascule effect 3=1229
Fe—Al, short-range order, by diffuse X-ray scatt. 4=15789
Fe—Al, short range order, 300°-400°C 3=13505
Fe—Al single crystals, magnetic annealing effect rel. to comp. 3=1040

Isomerism

See also Nuclear isomerism
1-alkenes, rotational 0=15783
allylic chlorides, rot. from i. r. spectra 4=28235
anils, transient species in photolysis 4=15847
bromocyclohexane, u.s. studies 1=4340
butene-2, cis-trans isomerization in shock tube 3=16160
n-butyl radicals, isomerization 1=6570
butyronitrile, rotational 3=6409
β-carotene, photoconductive props. of hindered and unhindered cis-isomers versus trans-isomer 1=8965
chlorocyclohexane, u.s. studies 1=4340
cis-trans isomerization of N_2O, in photolysis of hydrazoic acid 0=21288
cyclopentane derivatives, rotational isomers 1=19674
cyclopropane isomerization 1=7903
cyclopropanes 1=20754
Δ^{α}-pentenoic acid, entropy prod. 0=14098
difluorodiazine, heats of formation of isomers 3=8960
2, 3 dihalopropenes, rotational isomerism 1=17369
ethylene chloride, ratio of gauche to trans in soln. 0=2770
fluorinated olefins, coupling consts between cis and trans CF_3 groups 4=17316
isomerization of isobutyl radicals 3=8948
isomerization of primary n-alkayl free radicals 0=746

Isomerism—contd

isomerization of serum albumin in acidic media 0=21275
isopropyl radicals, study from decomposition 2=14236
kinetics of isomeric reactions 1=1472
macromolecules, configurational changes 1=10430
methyl cyclohexane, u.s. studies 1=4340
Mossbauer effect, equal shifts in cis- and trans- 4=15360
polymers, stereo, and transitions 3=20037
polymethine chains, rel. to electronic structure and chain length 4=6636
propionaldehyde, microwave spectrum 4=17308
n-propyl chloride, trans and gauche, energy difference 3=25130
propyl fluoride, rotational, microwave spectrum 2=18473
rotational isomers, ultrasonic relaxation 0=19126
rotational, theory of line-width alternation in e.s.r. spectra 2=20858
stereoisomerism of synthetic high polymers 0=4668-77
stilbene, photoisomerisation, rel. to u.v. spectra 2=14675
substituted benzaldehyde an ions, rotational, e.s.r. study 3=15373
substituted ethanes n.m.r. study of conformational equilibria 2=16562
terephthaldehyde anion, rotational isomerism, by ESR spectra 1=17368
tetramethyl-1,3-cyclobutanedione 3=17606
unimolecular reaction theory for vibr. excitation 3=3386
vapour pressures of cis-, gem-, and trans-dideuteroethylenes 3=8247
$B_{18}H_{22}$, X-ray diffraction study 4=4602
H, ortho to para conversion 4=23644
H, ortho—para conversion in solid, var. volumes 4=23621
HNO_3, isomerization, i.r. photochem. reaction 3=16159
N_2F_2, n.m.r. and double resonance, structure det. 2=16559
NH_4 thiocyanate, entropy prod. 0=14098
N_2O_3, unstable form 0=17750
N_2O_4, nonplanar isomer 0=2751
N_2O_4, two unstable forms 0=17750
Pt IV and Th IV acetylacetonates 0=8239
S_2F_2, existence of non-planar FSSF isomer 4=6604
tri-1-(2-methylnaphthyl) boron, n.m.r. study 4=12511

Isotope effects

(Heading introduced in 1962).
adsorption on surface, quantum treatment 2=19117
on atom vibrational freq. 4=28213
in β-ray interaction with matter 4=25063
crystal structure, atomic, temp. var., review 3=23439
effect on absorption spectra of NH_3 radicals 0=4214
effect in H atom—formaldehyde reaction 0=14114
enrichment coeff. meas., Rayleigh and differential methods 3=15307
calc., shifts in three particle systems 4=6464
diborane ($B^{11}\to B^{10}$), on atom vibrational freqs. 4=28213
on dipole moment of symmetrical molecules 4=6543
ethanes, deuterated, vapour press., statistical theory 4=24440
gases, effect on statistical thermodynamics 2=7250
Gibbs statistic of isotope systems 4=2721
hydrocarbon flame bands, deuterium substitution 4=25706
hydrocarbon gases, ionization, by beta-rays, H—D 3=19171-2
intermolecular interactions and vap. press. 3=22614
on internal frequencies in condensed phase 4=5151
ionic crystals, diffusion coeffs. of isotopes 2=14468
isotope shifts, second-order contribs. 3=8216
lattice dynamics, effect of local mass variations 4=6703
masses, from Sr to Ru 3=4728
methane and deuteroforms, mass spectra, metastable transitions 3=25148
methanes, effect of isotopic comp. on 2nd virial coeff. 2=15641
methanes, T-substituted, ioniz. and dissociation 4=3921
in molecules, electronic energy 2=8113
molecules, non-linear, inertia axis shift, rot.-rot. coupling 4=22332
molecules, vibrational frequencies 3=10493
neutron number var., and nuclear distortion, statistical model 4=986
in nonequilibrium reaction systems 3=16154
organic compounds, spectra, H—D 3=25114
partition-function ratio, for isotope substituted molecules 2=1082
phase equilibria, and intermol. forces, review 4=25765

Isotope effects—contd

- photochlorimation of H_2, CH_4, $CHCl_3$ and C_2H_6 3=11356
- polyglycine ($N^{14}\rightarrow N^{15}$), on atom vibrational freqs. 4=28213
- primary intramolecular kinetic isotope effect in nonequilibrium system 3=11347
- pyrolysis of cyclopropane and cyclobutane 3=8961
- sec-butyl systems, D substituted, chemically activated, secondary isotope effects 4=22432
- shift of γ-ray internal conversion in medium and heavy nuclei 3=6151
- solid—vapour and liq.—vapour equilibria 3=21611
- solution of O_2 and N_2 in H_2O 3=9450
- spectral lines, isotropic shift 3=25040
- on thermodynamic props. of condensed systems 2=4949
- trapped H and D atoms in γ-irradiated ice 3=2669
- unimolecular decomp. of chem. activated propyl radicals 3=20993
- in unimolecular decomposition of activated ethyl-d radicals 3=16154
- vapour pressure changes due to mol. mass distrib. 3=19073
- vapour pressure, expt. and theory review 3=21631
- vapour pressure, rel. to mol. structure 3=21632
- vapour pressures of isotopic molecules 3=8247
- vapour pressures of isotopic molecules 3=8248
- water, chemical decomposition, by u.s., lack of, for H 4=13745
- Ag I and II spectra, isotope shift 2=10211
- $B^{10}F_3$—$B^{11}F_3$, enrichment coeff. meas., Rayleigh and differential methods 3=15307
- BH, BD spectrum shifts 4=25636
- in Br and isotopic hydrogen mol. reaction 4=29208
- $C^{12}H_4$—$C^{13}H_4$, enrichment coeff. meas., Rayleigh and differential methods 3=15307
- Ca^{40}, μ mesic X-rays, energy 4=3823
- $Ca^{40,44}$ μmesic atoms, X-ray K_α shift 4=25600
- Cd I, 2288 A line, isotope shift 2=6093
- $Cd^{107,9,11,13}$, ^3S h.f.s. and isotope shifts 3=25049
- Cl + HCl and Cl + DCl exchanges, rates, D-isotope effect 4=29206
- Cu I and II spectra, isotope shift 2=6094
- Cu II, spectrum, h.f.s. 4=9640
- D, in reactions of Hg6($^3P_1$) with propane 3=8973
- D substitution, effect on glass transform. temp. of aq. inorganic soln. 3=23492
- H, D in UH_3, UD_3, effect on magnetothermal effects and magnetization per mol. 4·2°, 77·4K 3=8673
- H, effect in oxidation of benzaldehyde-α-t 0=1953
- H, fractionation between H_2O and aqueous H ion 4=23625
- H–D effects in acetylene decomposition by electron impact 4=25754
- H–D kinetic effect, at high temp. 2=4532
- H–D kinetic effect, in reaction CF_3 + CHD_3 2=23955
- H_2—D_2, solid, low temps., separation? 4=13488
- HD^+—He, HD^+—Ne, Ar^+—HD, and Kr^+—HD reactions 4=29205
- H_2—H_2^+ reaction, isotopic fractionation 3=2677
- H—He quaternary mixtures, diffusion, thermal 4=29672
- H_2O^{17}–H_2O^{16} system, relative volatilities 2=19783
- Hg spectra, odd–even staggering effect 2=18319
- Hg, spectrum, 2537 A 3=22484
- HgH, isotope shift in u.v. spectrum 2=22973
- In, superconducting crit. field 4=16343
- K, thermal emission of ions 4=24749
- K^{40} detection, by optical alignment 3=15296
- Li, elec. conductivity and lattice vibr. spectrum 2=10434
- Li, thermal emission of ions 4=24749
- N and O, effects on vapour pressure and thermodynamic props. of NO 1=3581
- $N_2^{14\ 15}$, solid, lattice parameters, unit cell volume 4=2085
- N_2^{15} spectrum, u.v., anomalous 3=25102
- $N^{15}H_3$ and deutero derivs., n.m.r., shifts 4=25741
- Na formate, chemical decomposition, by u.s., lack of, for H 4=13745
- Ne, 1.15 μ $2p_4 \leftarrow 2s_2$ 3=19944
- N_2O, effects on vapour pressure 1=16171
- O^{18}, exchanges, chemical, with O_2, NO, NO_2, mass spectrometry obs. 4=23645
- Rb optical aligment, temp. var. 3=15295
- Rb, thermal emission of ions 4=24749
- $Rb^{85,87}$, Knight shift, isotope effect 1=14824

Isotope effects—contd

- $Re^{185,187}$ mag. h. f. s. splitting and $Re^{186,188}$ mag. moment 4=28135
- Rh, superconducting, absence of effects 3=3963
- Ru^{44}, shift in arc spectrum 4=25508
- SO_2 spectrum, absorpt., α_2 system 4=25683
- Si I spectrum, isotope shift 2=6097
- Sm, spectra shift 3=15294
- SnII, H.f.s. and isotope shift 3283 A 4=25513
- Th spectrum 4=15291
- $U^{233,5,6}$, isotope shifts, 0.8-2.5 μ emission spectra 4=1217
- U I spectrum in hollow-cathode discharge 4=12379
- W^{183}, e.p.r., h.f.s. in glasses, silicate and phosphate 3=20656
- Yb I, isotope shift in λ 5556 A 3=8196

Isotope exchanges

- G.M. counters, for vapour phase studies 2=4526
- heterogeneous processes, influence of radioactive solid phase 0=14112
- hydrated ions, water exchange with solvent 0=14123
- kinetics, radioactive exposure study, electrolytic separation 2=6889
- malonic acid, decarboxylation, C isotope effects 4=13703
- partition function ratios for molecules containing N isotopes 0=20712
- size effects among isotopic molecules 0=21265
- B, between BF_3 and $BF_3.O(CH_3)_2$ 2=19137
- BF_3 with diethyl ether and tetrahydrofuran complexes 3=15361
- Br, between $[MeBr_6]^{2-}$ and Br 2=852
- in C^{13} extraction, statistical thermodynamics 2=851
- CO—Ni $(CO)_4$ system 3=3380
- $^{46}Ca_{(Hg)} + {}^{40}Ca^{2+}(solution) = {}^{40}Ca_{(Hg)} + {}^{46}Ca^{2+}(solution)$ reaction, isotope separation 4=28157
- D_2O, spectral shifts of transition metal ions and complexes in soln. 0=3531
- H, exchange reactions 0=3293
- H, on Pd 0=12106
- H–D, electron and u.v. irradiated, in presence of rare gases 0=749
- H–D, homogeneous exchange 0=16372
- H_2 and steam in catalytic oxidation of H by Ni–on–CrO_3 4=7758
- H–D, on clean Ge surfaces, search 2=10962
- H_2–D_2, on clean Ni surfaces 2=6871
- H_2–D_2O, effect on $(Pd-D)_{\alpha s}$ electrode 2=4546
- H_2O + D_2O, thermodynamics of mixing 4=29204
- Li in reaction of ethyl lithium with benzyl chloride 1=9167
- Lu, masses, meas. with mass-spectrometer 3=4727
- N, in NO–NO_3 systems 2=4527
- N^{15} in NO–NO_3^- system, fractionation temp. dependence 1=7900
- NH_3, equilib. const. from i.r. spectra 1=11610
- N_2O, quenching of Hg(6^3P_2)atoms, isotope effect 0=15650
- N_2O_3—NO, N isotopes, at low temp. 3=13592

Mg, by elec. mass filter 2=535
N, between nitrogen oxides and nitrosonium salt solns. 1=5985
N^{15}, by NO exchange with N_2O_3 0=11497
NO multicomponent mixtures, separation factors rel. to concn. 1=12268
Ne, thermal diffusion factor, temp. dependence 1=15948
Ne—nD_2 liquid systems, phase separation 3=3801
Pb, isotope effect in electrolysis of $PbBr_2$ 1=15198
Po light isotopes, mass number assignments 2=395
Pt^{201} 2=20540
Rb, molten, electromigration 2=10229, 11362
$Si^{28,29,30}$, by thermal diffusion of SiH_4 in column 3=25072
Sr, high purity, by magnetic deflection 1=17294
T, working up conc., thermal diffusion plant 2=8071
$Te^{127,129}$ isomer separation in different chemical media 4=30915
U, cascade process, vacuum techniques 1=3525
U, high purity, by magnetic deflection 1=17294
U, magneto-ionic expander separator 0=12652
U, nozzle, by adding He 3=15309
UF_6, gaseous diffusion, use of fine-pored Ag membranes 0=18385
UF^6, by nozzles 0=13397
U_3O_8, irradiated, fission-product Xe and Kr 0=15620
Xe, by thermal diffusion 0=4126
Yb, high purity, by magnetic deflection 1=17294
Zr^{95} from HF by electrodialysis 1=20751

Isotopes
atomic beam, resonance apparatus for radioactive isotopes 0=17685
"bypass nuclides", formation mechansim 2=1972
chemical element occurrence 1=15411
in chemical kinetics 0=14113
gas mixture, β-active, det. using ionization chambers 3=6187
hydrogen, differences in hexagonal structure of H_2 and D_2 condensed layers 4=13682
inert gases, in meteorites, composition, cosmic-ray effects 0=12272
isotope shifts in heavy atoms, theory 1=13925
isotopic shift in W arc spectrum 0=15667
linear chain, monatomic, isotope effect on vibrations 0=11570
masses, from Sr to Ru 1=19612
in metallurgy 2=17029
in meteorites, due to slow neutron irradiation 2=4750
nuclear binding energy, from Sr to Ru 1=19612
nuclear binding energy, from Sr to Ru 3=4728
physical props. of isotopically substituted classical fluids 1=1735
prediction of existence of He^8, Be^{12}, O^{13}, $B^{15,17,19}$, C^{16-20}, N^{18-21}, Mg^{20} 0=13396
preparation, by neutron irrad., graph theory 2=5928
in propane, mass spectrum 0=3741
quantum statistics of isotope effects 1=10435
in Richardton chondrite, analysis, rel. to age of elements 2=938

target preparation, for nuclear studies 2=17978
transuranic, sepn., props., survey 2=19085
secondary effects on reaction rates 0=14115-16
spectral analysis 0=13419
spectral analysis, in nuclear physics 0=3336
vacancy diffusion, isotope effect 0=20839
vapour pressure of isotopic liquids 0=2168
vapour pressure of Ne, A, Kr and Xe in solid state 1=6067
A, in liquid state, vapour pressure, by phenomenological cell model 1=9385

Isotopes—contd
A, production rates in meteorites 1=15436
A^{37} measurement in meteorites 1=15437
A^{37}, use in thermal diffusion study in gas mixtures 1=174
A^{39} measurement in meteorites 1=15437
Ag, in iron meteorites, Ag^{107} excess from extinct Pd^{107} 1=2608
Ag^{110m} 2=3497
$Ba^{135,137}$, h. f. s. of reson. line and nuclear quadrupole moments 4=25496
Br, from irradiation of C_6H_5Br with neutrons 1=13818
Br^{86}, discovery and separation 2=18298
C^{13}, mass determination 0=7707
C^{14} concentration rel. to sunspot activity 1=15465
C^{14}, use in $C^{14}O_2$ in thermal diffusion study in gas mixtures 1=174
C^{16}, discovery 1=7343
Cl, analysis, ion source 2=1527
Cl^{35},^{37}, microwave Zeeman spectrum 1=11068
$Cl^{35,37}$, μ-capture-rate difference 0=17371
Cd, identification from (n, γ) spectra 2=469
$Cd^{107,9,11,13}$, $^3S_1$ h.f.s. and isotope shifts 3=25049
Cu, bulk densities 0=7835
D, in water, spectral determ. 2=12302
Er^{159} 2=5857
Er^{159} 3=4597
$Fe^{55,59}$, diffusion in Ag and Cu, comp. with theory 1=4993
H, isotherms 0=6837
H, virial coefficient in mixtures with He 1=6898
H^5, from Li^7—γ reaction 3=12620
$H^{5,7}$, stability to neutron emission 0=15670
He, cluster theory of saturated vapour 2=11418
He^3 and He^4, melting curves 0=228
He^8, stability to neutron emission 0=15670
Hf^{168-70}, prod. 1=8645
Hg, nuclear magnetic resonance 0=1472
Hg, shifts in 2537A spectral line 1=9907
Hg^{185-90}, prod. by Au spallation 1=13686
$Hg^{193,199-202}$, 6^3P_1-state lifetimes 0=5856
Ho^{155}, discovery from γ spectroscopy, half life 3=8048
Kr, relative yields in fission 2=1938
$Kr^{82,86}$, saturated vapour press. diff. 3=21633
Li ions, isotopic effect in counter current electro-migration in molten LiBr and LiI 0=1959
Li, in solns., spectral det. 2=866
$Li^{6,7}$, diffusion in Si at high temp. 0=13560
$Li^{6,7}$, elastic modulus 0=4553
$Li^{6,7}$, liquid, viscosity 3=125
$Li^{6,7}$, specific heat 0=15813
$Li^{6,7}F$, thermal cond., 10-90°K 0=9901
Lu^{168-70}, prod. 1=8645
Mn^{54}, I^{125}, I^{130} production in cyclotron 1=13674
Mn^{58}, discovery 1=7390
Mo, in meteorites, anomalies 2=11117
Mo, spectral shifts 1=2292
$Mo^{96,97}$, spectral shift 0=5884
N_2, intensity distrib. in rotational structure of isotopic molecules 1=19633
$N^{14,15}$, h.f.s., by continuous optical orientation 1=12256
N^{14}–N^{15}, hyperfine anomaly 0=1482
N^{15}, mass determination 0=7707
Ne, diffusion in fused quartz 1=17558
Ne, in liquid state vapour pressure, by phenomenological cell model 1=9385
Ne, vapour pressure 1=10628
Ne, vapour pressures 0=8700
$Ne^{20,22}$, comparison of thermodynamic constants 0=12416
Ni, spectral shifts in 31 lines 1=5974
Os, identification from (n, γ) spectra 2=469
Pb, spectral anal. 0=13419
Pb, superconducting critical field variations 1=1858
Pd, spectral shifts at 4212 A 1=5975
Po, light isotopes, production 2=395
Pt, collective excitation of nuclei 1=7321
Pt, identification from (n, γ) spectra 2=469
Pt^{190}, α-particle energy and spectrum 3=4602
Pu^{238}, mass. 0=15669
Pu^{240} mass 1=19611
$Rb^{85,87}$, h.f.s. anomaly 2=16478
Rb^{85}—Rb^{86}, h.f.s. anomaly 1=12149
Ru, in meteorites 2=24106
Ru, spectral shifts 1=2292

Isotopes—contd
- S^{30}, discovery 1=7336
- Sb, identification from (n, γ) spectra 2=469
- Sn, mass differences, meas. 2=20760
- $Sn^{116,124}$, in Nb_3Sn, effect on superconducting transition 1=259
- Sr, shifts, nuclear volume effect discontinuity 1=9913
- Sr stable isotopes and Sr^{90}, isotopic shift 0=9774
- Sr^{87}/Sr^{86} mass ratio, spectrometer meas. 4=17265
- $Ta^{173-175}$, discovery 0=9605
- Tb^{150}, discovery 0=1379
- Te^{115}, new isotope, half-life 0=15532
- $Te^{122,4,6,8,130}$ mass diffs., neutron separation energies 3=22336
- $Te^{124,126,128}$, shifts in Te II 4049 A line 1=9909
- $Th^{229,232}$, spectral shift 1=4906
- Tl composition in meteorites 1=15438

hole drilling with ion beams 3=3695
hole formation, near atomic dimensions, silicate materials 3=16468
hole prod., v. small, in glass, by sand blasting 4=23992
hot cell for magnetic measurements, automatic 0=2417
hysteresigraph 0=9134
i.r. container for test pieces 3=11999
induction furnace for > 3000°C 1=16163
induction plasma torch, for growth of refractory crystals 2=2365
inert gas production, apparatus, use in electro-vacuum technol. 1=4167
infrared technology, recent advances 2=22001
instrument scale design 1=4164
ion beam supersonic annular nozzle as differential barrier 4=24280
ion drag pumps, for insulating liquids 0=1096
ion optical replication method for meshes 1=21161
level controller for liq. N_2 1=5373
level gauge for liquid H_2 and He 1=16184
levelling system for liq. N_2 1=2582
liquid column graded density establishment 1=21165
liquid-gas pourer, pressure cylinder attachment 4=29815
liquid level controller 3=11645
liquid level reproduction device 1=21166
liquid level sensors, variable capacitance 0=8602
machining of metal on a lathe 4=10990
mag. field of circular coil, drawing 0=1179
mag. field, stabilization method 0=11012
magnetic crack detector 1=21156
magnetic tape recording, multitrack 2=9751
making holes in crystals 0=16255
mechanical assembly for optical and semi-automatic meas. 2=11233
metal disk, thin, lapping vacuum 3=23721
metal foil prep. from tensile specimens, by electrolytic cutting 1=7897
metal-to-dielectric seal for optical or r.f. windows 1=5311
metal single crystals, machining and cutting 3=8814
metal spheres, small, preparation 2=13228
metal testing, electromagnetic methods 1=10363
metallic film deposition on quartz 1=10362
metal thin films, prep. for use as apodiser 4=21308
micro-colour recording, etching and machining using ion beam of high voltage 4=29998
microflow wheel cock 1=2740
microjet prep. of wire samples, electron microscopy 4=2104
micropipette or microneedle manipulator 4=27000
microscopic particle meas., "flying spot" scanning 1=10463
microwave resonance spectrometer 0=310
mineral separator, roll-type, corona discharge 2=24236
mixing apparatus for reaction kinetics obs. 4=23634
multilayer film, controlled deposition apparatus 4=23561
multiple-lead plug for high pressures 1=12728
multiple-tube burner, for crystal growth 2=19056
neutron target foils, use of inert matrix 2=11966
1963 Institute of Physics and Phys. Soc. Craftmanship Competition 3=9314
1963 Institute of Physics and Phys. Soc. Exhibition 3=9313
nondestructive technique for examining surfaces 0=2064
non-destructive testing 1=9238-9
non-destructive testing 1=11667
non-destructive testing 1=21155
nondestructive testing, eddy-current method 0=10460
nuclear spot-welding 3=13977
nylon spinneret holes, examination by scanning electron microscopy 0=6396
O-ring seal, rolling-type 1=2798
optical studies at high pressures and low temps., bomb. 2=7094

Laboratory apparatus and technique—contd
oscillogram mechanical reader 1=11668
oscilloscope recordings, digitalizing on to punched tape 2=5263
oven, Al foil 2=11435
oxide resistor furnace 1=6983
particle separation with zonal ultracentrifuge 3=7077
phase equilibria, pressure effects, glass—metal connector 4=2500
photoelastic model for joined structures 3=5396
photointegrating meter, portable, for use in crops 4=13998
photovaristers, differential, preparation 4=17540
Physical Society 1964 exhibition 4=23980-1
plotting spin-wave instability curves 4=20571
pneumatic annular atomizers for flame photometers 3=21549
pointing and electropolishing Be wire phonograph stylus 4=4994
polishing machine, acid, for dislocation free copper 4=4992
polishing of small spheres 1=21160
powder, separation by micro-dispenser 1=21164
preparation of incongruently melting phases 1=3769
pressure stabilizer for region of 1 torr 4=4995
pressure-vacuum apparatus, for high temp. 0=2062
pressure vessel valve 2=21776
pressure vessels, sealing of electrical leads 4=23988
pulse sampling oscilloscope, study of $m\mu$sec magnetization reversal 0=11857
Pyrex spiral Bourdon gauges, fabrication 1=9362
radioactive and nonradioactive particles, differentiation 1=9242
rapid handling system, irrad. soln. 3=24885
regulator for gas flows down to 0·01 cc min^{-1} 1=18489
replication process, carbon evaporation on metal film 3=13547
rot. mag. losses in ferrites, wide temp. range 0=3080
rubber membrane model for demonstrations 0=16561
rubber objects, simple prod. technique 3=13980
ruling engine control, by interferometer 2=19724
safety switch for water-cooled equipment 1=2581
scale, grating, gauze prod. ion beam—chemical process 4=14387
scale-section converter analysis 4=8582
scanning, electron-microscopic, for fluorescence and secondary electron emission 0=1763
scriber, for shock tube diaphragm disks 4=18336
seal, ultra-high vacuum, for space simulation tests 1=10557
sealing evacuated wide-bore silica tubing 4=11267
sealing of infrared windows to glass 1=5347
sealing vessels at high pressure, exhaust tube 2=7090
sealing windows at high pressure low temp. conditions 4=15999
seals, oil, operation, non-Newtonian flow 0=6750
search coil for metal-pipe location 0=4833
semiconductor thin film preparation by polishing and etching 1=4079
sharpener for microtome knives 1=10360
silica windows, construction technique 0=10335
single crystal thin section prep. by ultramicrotome 3=13978
size of defects by ultrasonic impulse echo method 0=5109
size parameter calc. from microscopic data, rapid method 4=26703
slits in Al films, forming technique 4=14000
slow displacement device 3=5309
sodium salicylate, layers, preparation method 4=13675
solar furnaces for high temp. meas. 0=14896
solder-glass technique 4=23990
solder-glass techniques 4=18010
soldering of crystalline quartz using active metals 1=4165
sorption meas. on reactive condensable vapours up to 350°C 0=18451
spark cutting of metal crystals 1=11669
spark-erosion in liq. Ar for metal powder prod. 4=30999
spark machining, clearance regulation, method 4=31000
specimen stage for electron microscopy, tilting and rotating 0=10340

Laboratory apparatus and technique—contd
sphere cutting from crystals with anisotropy of hardness 0=703
spheres made to high degree of accuracy 1=21159
spheres, small, prodn. by melting Fe powder 2=17059
surface properties, exam. by h.f. electromagnetic contactless method 0=6530
suspension, double magnetic 4=3096
teaching, performance study at Montana State College (1959) 1=15590
television receiver scanning, aperture influence compensation 4=11495
temperature difference across liquid film, maintenance by thermoelectric heat pump 4=24418
thermal diffusion apparatus 0=100
thermal-precipitation for air sampling 0=10362
thermoelectric cutting, semiconducting Hg cpds 4=10996
thermopiles with >80 junctions, method of construction 1=7680
thinning of metals for electron microscopy, jet technique 3=11333
time-scale generator, logarithmic 3=9405
time switch for corridor demonstration 3=7083
trace reader, mechanical 1=10361
track follower, oscillogram 3=19529
turret for vapour deposition, multiple heater 2=21961
u.s. assembly for recording flaws in sheet metal 0=8760
u.s. flaw detection 1=14921
ultra-high pressure high-temp. research device 0=8460
ultra-microtome jigs, to shape hard-specimen tips 2=11235
ultramicrotome, new diamond knife trough 1=21157
ultramicrotome UMT-2, performance 3=3696
ultrasonic machine tool, expansion in cutting zone 4=14298
vacuum microbalance for semiconductor study 0=11681
vacuum trip unit, transistorized 1=2802
valve, shock, for Wilson cloud chambers 2=18036
vertical circle, for teaching dynamics and kinematics 2=11310
viscosity measurements of gases 0=92
water rig, transparent models for flow study 3=7190
water washing system for semiconducting devices 0=4724
welding W, Ta, Mb 3=18685
wet-string crystal cutter 1=7850
winding quartz springs for sorption balances 4=4998
wire-grids, cylindrical, manufacture 4=23995
wires, Nb-Sn, prepn. for microscopy 2=23924
wires, small dia., wound into spirals 4=2499
wires, spot welding, 2 methods 1=21162
X-ray goniometers, safe rapid universal mounting system 1=20457
X-Y projector plotter, for teaching 2=13232
yarns and cords, rubber models 2=15084
Au wire attachment to semiconducting films 1=11670
Cd single crystals, shaping and polishing 4=30812
Cs-vapour dispenser 4=21544
$CsBr_3$ samples, preparation 4=23993
GaP, n-type, thermocompression bonding of contacts 3=23722
Ge, electropolishing 3=23501
Mo, welding 3=18685
N_2 gas prodn., drying 4=4996
NH_4 alum, reagent grade, purification 3=1265
Si, contact prod. by sparking 4=12951
Si, electropolishing 3=23501
Si ion bombardment doping, Mo masking 4=26059
Ta, welding 3=18685
Te, high-purity, prod. and analysis 3=18684
W, welding 3=18685

Lanthanum
allotropy at high press. 4=26560
atoms, La I, h.f.s., quadrupole coupling 2=3701
elec. cond., 1.3-300°K 1=5003
elec. resistance, effect of pressure 1=14356
elec. resistance, effect of pressure 1=17604
fluorescent yield of L-shell 4=3774
ions, La^{3+}, influence on NO_3^- u.v. spectrum in ionic melts 2=15593
nuclear mag. resonance, Knight shift, 1.8 and 300°K 0=18228
spectrum, in CaF_2, SrF_2, BaF_2 after 2 MeV β irrad., d^1 4=10167

Lanthanum—contd
superconducting, far i.r. meas., gap width 4=14522
superconducting, pressure and volume effects, crit. mag. field, Fermi surface 1=258
superconductivity and ferromagnetism 0=14932
superconductivity, of foils and films 2=22118
superconductivity, mechanism, rel. to low-lying virtual f-shell 4=5516
superconductivity, with rare earth additives 0=12557
superconductivity, simple model 4=14523
superconductivity, transition temp. 0=12560
superconductivity, transition temp. impurity depend. 0=8964, 19556
vapour pressure 2=2937
La, in molten La tribromide, elec. cond. increase with metal conc. 4=8220
La^{2+}, in CaF_2, e.s.r. 3=20650
La^{193}, n.m.r., low temp. var., Knight shift 4=20624
La_2 molec. dissociation energy determ. 4=12525

Lanthanum compounds
ethylsulphate, with Pu^{3+}, absorption spectrum 3=8601
ferrite, ortho, effect of substituting Al^{3+} for Fe^{3+}, from mag. meas. 3=8683
lanthanide salts, audiofrequency dispersion effects 3=23243
intermetallic or alloy, ultra-high field supercond. 3=3964
magnetic props., from μ-mesic atom study 1=17298
monarite single crystals, X-ray study 0=3242
silicates, Pb and Pb–Mn activated, luminescence 0=13710
trichloride, with Pu^{3+}, absorption spectrum 3=8601
$(Ce, La)_2Mg_3(NO_3)_{12}.24H_2O$, protons. polariz., 170 times increase in 3700 Oe at 1.6°K 3=20065
La chloride solutions, freezing point 0=19506
La ethyl sulphate, crystal field grad., from e.s.r. large quadrupole splitting 4=23048
La ethyl sulphate, e.s.r. of Cm^{3+} 3=13299
La ethyl sulphate, $(Pm^{147})^{3+}$ e.s.r. 1=20223
La hexaboride, elec. props., temp. depend. 1=5005
La hydride, bonding, slow-neutron scatt. study 2=547
La hydrides, search for superconductivity 4=5517
La magnesium nitrate, energy diff. between 1st excited and ground states 4=12641
La orthoferrites, effect of Al substitution on mag. props. 1=1239
La oxide, band system, rotational analysis 2=8090
La-rare earth, supercond. transition temp. 0=12560
La-substituted YFe garnet, Curie temp. 1=14749
La tungstate, red luminescence under u.v. excitation 3=13206
$LaAlO_3$, Cr^{3+} and Gd^{3+} e.s.r., 4°-700°K 4=26386
$LaAlO_3$, e.s.r. of Fe^{3+} 4=23074
$LaAlO_3$, e.s.r. of Gd^{3+}, Pr^{3+} 4=26383
$LaAlO_3$, Ga^{3+} e.s.r. and phase transform. 3=11112
$LaAlO_3$, n.m.r. of La^{139}, Al^{27} 4=23074
$LaAlO_3$: Cr, Nd, $Cr^{3+}3d \rightarrow Nd^{3+}4f$ energy transfer 4=30539
LaB, powder, emissivity 0=16919
LaB_6, electrical and optical props., electron states 4=7139
LaB_6, electron and ion emission, applic. energy converters 2=17863
LaB_6, ion source cathode 4=3050
LaB_6, n.m.r. and quadrupole binding const. 3=20678
LaB_6, optical constants and energy spectra 3=20437
LaB_6, semiconducting, from reflectivity and absorpt., 15.5 μ 3=20437
$LaBr_3$, lattice vibrations 4=20195
$LaBr_3$, lattice vibrations from vibronic spectrum 4=1365
$LaBr_3$, Pr^{3+} absorption and fluorescence spectra 2=10595
LaC_2, mean ampl. of vibr. and thermodyn. props. 4=15348
LaC_2 neutron diffract. & paramag. scatt. analyses 3=1328
LaC_2, structure 2=4419
La_2C_3, neutron diffract. and paramag. scatt. analyses 3=1328
La_2C_3, structure 2=4420
$La(C_2H_5SO_4)_3.9H_2O$, Gd^{+++} spin-lattice effects 0=6256
$LaCl_3$, absorption and self-luminescence of Cf^{3+} $(5f^9)$ 2=2248
$LaCl_3$, absorption spectrum of Am^{3+} 2=2232
$LaCl_3$, containing Pr^{3+}, vibronic selection rules at special points of Brillouin zone 4=12615
$LaCl_3$, crystal field grad., from e.s.r. large quadrupole splitting 4=23048
$LaCl_3$, crystal field symmetry, time reversal appl. 4=28309-10

Lanthanum compounds—contd

cyclotron resonance, at 36 kMc/s 3=6505
de Haas—van Alphen effect, 35 kG 3=20559
Debye temp., temp. depend., X-ray method 0=20747
deformation distribution, fatigued in vacuo 1=7825
deformation, microstresses, X-ray analysis 3=20704
deformation, resist., effect of strain rate and temp. 4=28931
density, bulk and X-ray 3=25731
diffusion, anomalous, of Ce, Nd and Pm 3=13005
diffusion in Au crystals in boiling HCl 3=4888
diffusion, into Cu and Cu:Pb 2=12451
diffusion, self, 20-85°C, test of sensitive α-recoil method 4=1516
dislocations, edge, fast moving 2=12433
dissolution and contact melting, effect of X- and n-irrad. 1=19819
dust, $Pb^{212,214}$, size distrib. of radioactivity 0=4819

elastic consts., dislocation contribution 0=3154
elastic moduli at low temp., rel. to Debye temp. 3=1212
elastic moduli, normal-to-supercond. transition 2=7508
elastic resonance peaks, rel. to dislocation motion 3=1220
elec. resistance, 4.2°-1.65°K, rel. to sample size 3=2851
elec. resistance, rel. to impurity 3=25324
elec. resistance, 10°-14°K 3=2852
electrical resistance, at high pressures 2=618
electodiffusion 2=6374
electron backscatt. coeff., 8-22 MeV 4=22122
electron beams, energy dissipation, fair agreement for medium penetration 4=6817
electron emission, photostimulated, on reaction with NaOH or KOH 1=16376
electron emission, secondary, due to γ-irrad. 1=13120
electron—photon cascades in, mult. scatt. effect 0=1328
electron—photon shower in, lateral and ang. distrib. 0=9472
electronic states, density, max. near Fermi level 0=20772
electronic structure, calc. 0=9888
energy gap, by low-temp. penetration depth meas. 0=7034
equation of state, at high pressures 0=11550, 11549
etching for polarized light examination 1=1364
fatigue life, atmosphere dependence 4=13421
fatigue life, effect of air pressure 1=6482
Fermi surf. invest. by cyclotron res. 3=6494
Fermi surface , cyclotron resonance 2=8189
Fermi surface, cyclotron resonance meas. 4=6793
Fermi surface, image 2=23115
Fermi surface from magnetoacoustic effect 1=17459
fermi surface, and magnetoelec. props. 2=23117
Fermi surface model and galvanomagnetic props. 1=17464
Fermi surface "necks", magnetoresist. meas. 3=25243
film on Ag, Pd, Ni, structure 3=1371
films, conductance during vacuum deposition 3=25327
films, disordered, annealing energy and resistivity decrease 1=20597
films, electrical conductivity (−150° to +200°C) 1=14368
films, elec. cond., rel. to thickness 2=12491, 18636
films, elec. resistance, temp. coeff. 2=8281
films, evap. on Cu films, Tc 2=9485
films, on glass and quartz, resistance, temp. depend., structure 1=2548
films, Hall effect 2=8282

Lead—contd
films, internal stresses down to 4.2°K 4=4669
films, photoemission 0=9074
films, quench-condensed, elec. props. 2=23242
films separated by insulating layer, Josephson tunnel current, rel. to magnetic field 4=5506
films, storage elements, relaxation times 0=7035
film, superconducting, anomalous density of states 4=404
films, supercond. pulse-destroyed 4=21412
films, supercond., vapour sources for vacuum deposition 3=9525
films superconductivity and normal cond. rel. to adsorbed O 3=16872
films, superconductivity, rel. to residual gases 3=16878
films, vacuum evap., semiconducting props. 2=6469-70
films, work function 2=9612
flexural Rayleigh waves in plates 1=2808
flow under simple shear, polycrystalline Pb 0=8121
foils, prep., as isotope target 2=17978
foils, rare gas loading and evolution 1=17551
foils, X-irrad., 320 kV, secondary electrons 3=12241
formation of macromosaic substructures 0=13545
freezing, high-purity samples, as temp. standards 0=10803
friction with various materials, effect of adhesion 0=16245
γ-ray absorption 1=7226
gamma-ray absorption 2=5599
gamma-ray absorption, atomic cross-section 2=3710
gamma-ray absorption, effect of spherical air bubbles 2=5601
gamma-ray absorption, in reactor shielding 2=3667
γ-ray backscattering, 0.2-2.0 MeV 0=7318
gamma-ray scatt., elastic, 9 MeV, differential cross-section 4=6316
gamma-ray scattering, inelastic, by bound electrons 2=18090
gamma-ray scattering, 662 keV, off K electrons 2=1967
gamma-ray scattering, source in contact with Pb 2=1676
generation of high-energy cosmic rays, spectra 0=9454
"getter" for Ni, in Ge 0=12231
glide in monocrystals 1=20359
grain growth in Sn, effect of small Pb impurity 1=15152
grain and twin boundary hardening, solute-induced 4=2014
gyromagnetic effect, meas. on superconducting spheres 0=8949
halides, thermal expansion at low temps., expt. 4=17369
hardening in high-purity Pb 4=28963
hardness and creep, temp. and time variations 1=20389
hardness, rel. to temp. 2=23792
heat transfer with liq. He II 1=13034
impact high temp. behaviour 4=20665
impurity ions in Pb, scattering cross-sections and charges 3=17813
internal friction 0=18245
internal friction, effects of temp. (room-200°C) and number of elastic-plastic cycles 3=6778
interrelationship of physical properties 0=4924
ion emission, laser induced velo. var. with pulse height 4=19111
ionization by and energy loss of 85 MeV γ-rays 0=11131
ions, diffusion in KCl crystal 3=15510
ions, in metal, mobility, effective charges 2=18609
isotope analysis, mass spectrometer ion source 2=20058
isotope analysis, Pb^{207}/Pb^{206} eval. in pitch-blende by mass spectr. 2=10998
isotope effect in electrolysis of $PbBr_2$ 1=15198
isotopic anal., spectral methods 1=3526
isotopic composition determination, high accuracy 0=4159
isotopic spectral anal. 0=13419
lattice dynamics, dispersion curves at 100°K 3=2708
lattice vacancy equilibrium concentration 3=22739
lattice vibrations, Fermi surface image 3=6467
layers, on Si and Ti bases, secondary electron emission 1=4637
layers, on Si and Ti bases, secondary electron emission 1=10734
lifetime, under load 0=16223
liquid, atomic motions 2=17437
liquid, cold-neutron scatt. cross-section, calc. rel. to atomic motions 1=6853
liquid, coordination number 1=4320
liquid, density measurement 1=18388

Lead—contd
- liquid flow, activation energy jumps and cluster formation 4=5137
- liquid, Hall effect 3=16636
- liquid, Hall effect, meas. 3=7218
- liquid, optical constants 1=11762
- liquid, solubility of Kr 2=52
- liquid, solubility of Kr in 0=19120
- liquid, spectral line intensity, rel. to evaporation rate 2=22037
- liquid structure, by X-ray scattering and atomic distribution 1=15840
- liquid, time-dependent pair correlations, by neutron scatt. 0=937
- liquid, turbulent flow, heat transfer 2=19740
- liquid, viscosity 2=7182, 15542
- magnetic susceptibility, room temp. to 20.4°K 0=21026
- magnetoacoustic effects, h.f., and Fermi surface meas. 3=6472
- magnetoacoustic effects in longitud. fields 3=25192
- magnetoacoustic effects, with parallel mag. fields 2=12377
- magnetoplasma resonance, l.f., meas. 3=8409
- magnetoresistance, anisotropy, Fermi surface 0=9939
- matrix elements, retarded and nonretarded, rel. to K X-ray relative intensities 0=11511
- mechanical props., 1.6-4.2°K 0=18241
- metallic valence state 0=4256
- mosaic size from X-ray measurements 1=12669
- multipole spectra, Pb II 4=19950
- μ-mesic atoms, X-ray emission and radiationless transitions 1=4919
- μ-meson scattering 1=7258
- muon capture, energy of emitted neutrons 0=1292
- n.m.r., broadening in fine particles 3=20681
- neutron absorption, total cross-section for cold neutrons 2=20353
- neutron collision mean free path 1=8460
- neutron production by cosmic rays, effect of carbon absorbers 0=1343
- neutron prod. by cosmic-ray protons, meas. 4=9336
- neutron prod. by fast cosmic-ray muons, meas. 4=9337
- neutron scatt., cold. by solid and liq. 3=4823
- normal and superconducting, thermal expansion 2=6286
- overstressed microregions, mech. props. 3=11142
- pair formation cross-section by photon absorption 0=5534
- particles included in Ni grain dihedral angle, effect of stress 4=23533
- phonon drag, role in low-temp. thermoelec. power 1=6070
- phonon spectra, Kohn anomalies 3=25190
- photoelec. emission of highly disordered films 1=16383
- plasticity, stacking-fault energy 2=8718
- polycrystalline, flow behaviour under simple shear 3=6793
- polymorphism at high pressure 3=8883
- porous, dynamic compression 2=14876
- porous, dynamic compression 3=6787
- prod. of π^- mesons by cosmic rays 0=15420
- props., pressure depend. 0=13495
- proton bombarded, 143 MeV, neutrons emitted at 0° 2=7987
- range straggling of charged particles in, calc. 0=5560
- in sand, γ-ray absorption analysis 0=12121
- secondary electron emission, and inelastic electron scatt. 2=1492
- secondary electron emission, solid and liq. state 0=1149
- shock compression up to 9×10^6 atm 3=6786
- shock wave propag. 0=12453
- single crystals, large growth and electric-spark cutting 0=13976
- solar abundance 1=5970
- solid and liquid, thermal motion study with neutron beam 1=12351
- solid solution in Tl, superconductivity 1=10642
- specific heat 0=2791-4
- specific heat, calc. 0=7850
- specific heat determ. from vibration spectrum data 4=9825
- specific heat, 0.3°-4°K 3=10601
- spectral analysis, isotope conc. in micro-quantities 2=865
- spin-lattice relaxation 2=18957
- spin-spin coupling with protons 3=719
- sputtering by Ar^+, 1·2 MeV, preferential ejection 3=7656

Lead—contd
- sputtering, by A^+, rel. to crystal direction 2=3094
- stacking faults 1=12395
- stacking faults, bulk specimens, measurement probabilities 3=12992
- stress-strain meas. at various temps. 0=3144
- stress/strain at 1.4–77°K 1=12594
- superconducting 1=18709
- superconducting 3=328
- superconducting, apparent structure of far i.r. energy gap 0=1083
- superconducting cavity, with high Q, for use at microwave freqs. 4=16379
- superconducting, circulating current, shot noise 4=21416
- superconductivity, crit. fields, effect of cold working at 78°K 3=5588
- supercond., crit. field, effect of neutron irradiation, at 78°K 3=14451
- superconducting critical field, pressure effect up to 650 atm 1=7001
- supercond. crit. fields var. with residual cond. 4=18579
- superconducting, density of states meas. 2=11572
- supercond. density of states var., tunnelling meas. 4=21417
- superconducting domains, det. by electron beam 4=5518
- superconducting double layer, with Bi, diffusion and contact effect 4=24513
- superconducting, energy-gap functions, theory 3=16867
- superconducting, energy gap, meas. by electron tunnelling in $Al/Al_2O_3/Pb$ sandwich 0=16949
- superconducting energy gaps, by electron tunnelling 3=333
- superconductivity, energy gap, u.s. meas. 4=18580
- superconducting, far-i.r. absorption 0=14933
- superconductivity of films, critical mag. field 1=18716
- superconducting films, current distrib. 2=22117
- superconducting films, domain struct. and current flow, opt. study 2=7512
- supercond. films, e. m. microwave absorption, energy gap var., mag. field effect 4=29835
- superconducting films, energy gap, mag. field depend., tunnelling meas. 4=21414
- superconducting films, energy gap, tunnelling meas. 4=16347
- superconducting films, intermediate state 2=9487
- superconducting film superimposed on normal metal 4=24503
- superconducting film, thermal cond. and energy gap, mag. field effects 4=18608
- superconducting films, tunnelling 2=22110
- superconducting hollow cylinder, frozen-in mag. flux 3=12022
- superconducting, i.r. absorption, theory 0=10842
- superconducting, injected electron lifetime 3=14450
- superconducting, isotope effect on critical field 1=1858
- superconducting, law of corresponding states, expt. and theory compared 0=1074
- superconducting, mag. field noise, Barkhausen type 3=24147
- supercond., mag. field penetration, temp. var. 1=16198
- superconductive, mag. field trapped in hollow cylinder 4=389
- superconducting, and normal films, far i.r. transmission, 0.1-1.1 mm 0=10852
- superconducting Pb–Pb contact resistance, motion effects 4=16349
- superconducting, as permanent magnet 3=338
- superconducting, pressure and volume effects, crit. mag. field, Fermi surface 1=258
- superconducting ring, trapped-flux decay, rel. to irrad. 3=3955
- superconducting, specific heat jump at critical temp. 4=5519
- supercond., specific heat, and normal, equal lattice T^3 term. 4=18585
- superconducting, structure at critical temp. 0=18337
- superconducting, surface electrical losses, in l.f. fields 3=12033
- superconductivity, surface losses at low freq. 4=2914
- superconductive thermal boundary resistance, with Cu 3=19108
- superconducting, thermal cond., effect of plastic deformation 0=8938

Lead—contd
superconducting, transition, in hollow cylinder 0=8951
superconducting, transition irreversibility 0=12559
superconducting transition temp. 1=18717
superconducting, transition temp./gap ratio, effect of quasi-particle damping 4=18578
superconducting, transition temp., pressure depend., up to 10^4 atm 0=8938
superconducting, transition, time delays in 500-1000 A films 0=1082
superconducting, transitions, in Pb thermal switches 2=2942
superconducting, tunnel effect in films 1=18707
superconducting tunneling current, calc. 3=16858
supercond. tunnelling study, energy gap det. 1=8284
supercond. wires, Al Ag, Au covered, free energy change 4=18581
surface activity, on Zn, internal friction study 2=21569
surface friction, wear rate and polishing 2=23795
temp. change at boundary with superfluid He 3=5570
temperature change at boundary with superfluid He 2=15838
temp. diffuse scattering of X-rays 0=1920-1
thermal conductivity in intermediate supercond. state 1=4973
thermal cond., normal and supercond. 0=10843
thermal cond., 300°K 1=16133
thermal conductivity near T_c, pure specimens 4=6765
thermal expansion, low temps. 2=7439
thermal expansion, normal and supercond. states 2=3848
thermal expansion, 20°–300°K, meas. 2=10339
thermal vacancies, formation energy specific resist. 1=11192
thin evaporated films, conductivity anomalies after tempering 1=6561
transition effects due to star-producing cosmic rays 0=15496
u.s. attenuation in single crystal in mag. field 0=9849
ultrasonic attenuation 3=4819
vacancies, formation energy and conc. 1=7575
vaporized, reacting with various gases, u.v. absorpt. 2=15652
vapour, in flames and inorganic cpd. vapours, anomalous excitation 4=9658
variation of elastic moduli at superconducting transition 1=11884
viscosity, temp. var., m. p. to 1000°C 4=5160
viscosity, temp. variation 1=18347
X-ray K absorption edge, rel. to μ-meson mass det. 0=11559
X-rav L intensities 1=13951
X-ray L spectrum, emission 2=6588
zone refining 3=23487
in Bi, effect on phase transformations 3=25751
Pb and Cu films superimposed, superconductivity 4=16348
Pb^{205} in meteorites 1=15438
Pb^{210} diffusion in PbS at 700°C, rel. to stoichiometry 4=15491
Pb^{212}(ThB) ion mobility in air, Zeleny's method, two groups 4=5561
Pb^{2+}, diffusion in KCl 1=19806

Lead compounds
alloys, ageing mechanism 1=15151
alloys, dilute, thermoelec. power at low temp., role of phonon drag 1=6070
alloys, with In or Bi, normal and supercond., thermal cond. 1=12360
Kosolite, PbO. UO_3SiO_2. H_2O, crystal structure atomic 4=7622
magnetoplumbite, anisotropy const., 77-293°K 0=6222
magnetoplumbite, domain nucleation at inclusions 4=17633
magnetoplumbite ($PbFe_{12}O_{19}$), domain structure, temp. depend. 4=7268
magnetoplumbite, electron mirror micrographs, stray field meas. 3=13266
magnetoplumbite, magnetic domain structure rel. to surface orientation 4=15650
magnetoplumbite, microhardn ess 2=21449
magnetoplumbite, remanent structure 1=17954
n.m.r. of Pb^{207}, chemical shifts 4=20616

Lead compounds—contd
perovskite, coexistence of ferroelectric and ferrimagnetic states 3=6614
rathite, structural study 3 forms identified 2=19080
solutions, with excess Br^- and Cl^-, luminescence and absorption, temp. depend. 2=7220
superconductivity 3=24148
superconductivity of binary and isoelectronic alloys, 4=24504
superconducting, critical current/mag. field, imperfection effects, alloy 3=19112
Pb acetate, aq. soln., dissociation, u. s. study 4=26739
Pb acetate, aq. soln., dissociation, u. s. study 4=26740
Pb acetate, aq., u.s. velocity and absorpt. 2=11369
Pb acetate, molten, 60-100°C, u.s. velocity 1=15869
Pb acetate trihydrate, crystal structure 2=6815
alloys, hardness, rel. to temp. 2=23792
alloys lattice vacancy equilibrium concentration 3=22739
Pb alloys, n.m.r. of Pb^{207}, Knight shift meas. 4=20617
Pb alloys, supercond., far i. r. absorption 4=8569
alloys, superconducting, absorpt., far i. r., and sharp edge gap 4=24505
Pb azide bars, dislocation vels. 3=22778
α-Pb azide, crystal structure 4=10538
Pb azide, detonation initiation by high-intensity light 4=30898
Pb base cast alloys, elec. resist. rel. to composition 3=20262
Pb-base solid solutions, superconductivity 3=14449
Pb-base supercond. alloys, mag. props. 3=9684
Pb borate glasses and compounds, high-temp. energy rels. 4=22516
chalcogenides, thermal expansion, 20°-340° K, rel. to Grüneisen const. 4=1403
cryolite, u.v. filters 2=7379
Pb ferrite, elec. cond., anisotropy and mech. 4=6953
Pb ferrite, susceptibility, temp.-depend., above Curie pt. 4=15656
ferrite, temp. dependence of magnetization 1=11449
halides, absorption edge, pressure depend. 0=4406
Pb halides, adsorption of water vapour 3=1381
Pb halides, exciton spectra, low-temp. 3=10934
halides, films, rapid prep. 0=14081
halides, heat of fusion determination 0=14901
Pb halides, i.r. transmissions 2=10568
Pb halides, Pb visible spectrum, rel. to complex formation 4=22375
hexahalide complexes, electron transfer spectra 0=20650
Pb hydroxide, decomposition in electron microscope 4=4698
Pb iodide aerosol on supercooled fog, crystallizing action 4=13790
Pb, i.r. reflection and transmission spectra 4=26184
Pb metaniobate in Na niobate, dielec. and piezoelec. props. 0=630
Pb oxide layers, photocond. props. 2=6501
phosphate glasses, binary, properties 0=21216
Pb polyphosphate, arrangement of anion chains 4=7623
Pb selenate, crystal structure 0=16329
Pb silicate glasses, elec. cond. rel. to "water" content 3=2945
Pb silicate glasses, radiation effects on elec. cond. and dielectric loss 4=17515
Pb solutions, surface tension, temp. depend. 3=21340
Pb sulphate, surface energy of 100 faces, calc. 4=20178
telluride, chemical polishing 3=6881
Pb tetrahalides, vibration, mean amplitudes 4=22377
titanate-zirconate ceramics, dielec. props. 0=16021
Pb titanate zirconate ceramics, electro-acoustic sensitivity 2=17548
Pb titanate zirconate ceramics, h.f. dielec. const. 4=4215
Pb titanate zirconate ceramics, piezoelec. and dielec. props., 4-77°K 2=8474
Pb zirconate-titanate ceramic, resonance curves 1=11343
Pb titanate zirconate ceramic, tensile strength 1=20376
Pb titanate zirconate ceramics, various consts. 2=14610
lead titinate zirconate, electroelastic consts., variation 4=15563
Pb titanate zirconate transducer, calibration 2=17547
Pb zirconate titanate ferroelectric resonators, small-signal parameters rel. to polarization state 4=28629
lead zirconate titanate, high-temp. discharges 1=1141

Lead compounds—contd

Pb zirconate–titanate, modified by Bi ferrite, lattice parameters and electric properties 4=7049
lead zirconate titinate open tubes, in underwater transducers, performance 4=14274
Pb$_2$, exciton absorption 2=8518
Pb–Ag, formation of macromosaic substructures 0=13545
Pb–Ag, stacking faults 1=12395
Pb–Al$_2$O$_3$–Pb structures, Schottky electron field emission 3=9828
Pb–As–S cpds., crystal structures, comparison 2=12913
Pb$_5$As$_9$S$_{18}$ (baumhaurite), crystal structure 2=12912
Pb$_6$As$_{10}$S$_{20}$, rathite III, crystal structure 1=4050
Pb$_9$As$_{13}$S$_{26}$ (rathite II), crystal structure 2=12913
Pb–Au supercond. film sandwiches, intermetallic cpd. effects 4=27422
Pb–Ba metaniobate, solid soln. piezoelectricity 2=14635
Pb–Ba and Pb–Sr zirconate–titanate, piezoelectric finite strain response 4=7054
PbBa ferrite, mag. props., composition depend. 4=13235
Pb$_{0\cdot5}$Ba$_{0\cdot2}$Ca$_{0\cdot2}$(Nb$_{1-x}$Ta$_x$)$_2$, O$_6$, ferroelec. props. 2=14613
(Pb, Ba)Nb$_2$O$_6$, ferroelec. props. rel. to structure 0=8217
(Pb$_{0.6}$Ba$_{0.4}$) Nb$_2$O$_6$, piezoelectric sensing elements 2=14618
Pb$_{0.5}$Ba$_{0.2}$Sr$_{0.4}$(Nb$_{1-x}$Ta$_x$)$_2$O$_6$, ferroelec. props. 2=14613
(Pb, Ba)(Ti, Zr)O$_3$ solid solns., phase transitions 4=15739
Pb(99%)–Bi alloy, electronic spec. ht. 3=6478
Pb–Bi (88:12) films, phase, metastable, from supercond. var. 4=23274
Pb–Bi alloy, liquid, turbulent flow 2=19740
Pb–Bi, molten, ultrasound velocity 1=5276
Pb–Bi alloy, superconducting critical current 2=17725
Pb–Bi, supercond., a.c. loss 3=3956
Pb–Bi, supercond. crit. fields, parallel and perpend. 4=18582
Pb–Bi, superconducting thermal cond., effect of plastic deformation 0=8938
Pb–Bi supercond. wires, Al covered, free energy change 4=18581
Pb-Bi alloys, thermally cycled, dimens. growth coefficient 4=28376
PbBi$_2$Nb$_2$O$_9$, production and permittivity 0=636
Pb Bi$_2$Nb$_2$C$_9$, structure rel. to dielec. props. 2=17026
Pb Bi$_2$S$_4$, crystal structure 2=15035
PbBi$_4$Te$_7$, crystal structure 3=6838
PbBi$_4$Te$_7$, second superlattice structure 3=13508
PbBi$_4$Te$_7$, structure, by electron diffr. 3=13510
PbBi$_4$Te$_7$ alloy, superstructure III 4=30851
PbBr$_2$, activity coeffs., in reciprocal molten salt systems PbBr$_2$ + NaCl and PbCl$_2$ + NaBr 3=16155
PbBr$_2$, fused, thermoelectric power 3=9477
PbBr$_2$, isotope effect in electrolytic transport of Pb 1=15198
Pb–Cd, eutectic alloy, interlamellar spacing meas. 4=4650
Pb–Cd, In or Sn, supercond., type II, mag. hysteresis and defects 4=18583
Pb–Cd, molten, ultrasound velocity 1=5276
Pb–Cd, pptn. and superconductivity 3=24145
Pb Cl$_2$, absorption and luminescence of solutions 2=15599
PbCl$_2$, aerosols, phase changes 3=1402
Pb Cl$_2$, cotunnite, crystal structure 2=8832
PbCl$_2$, crystal structure, atomic 4=13592
Pb Cl$_2$, films, absorpt. spectrum 2=12598
PbCl$_2$, films, optical absorption 1=14583
PbCl$_2$, fused, refractive index rel. to temperature 3=11796
PbCl$_2$, fused, thermoelectric power 3=9477
Pb Cl$_2$, ionic melt, isotopic migration processes 2=15144
PbCl$_2$, local electron centres, optical absorption 1=11229
Pb Cl$_2$, u.v. absorpt. spectrum 2=10604
PbCl$_2$–KCl melt, double layer, capacity 3=3400
PbCl$_2$–KCl system, liq. and solid, Raman spectra 4=18205
PbCl$_2$ and MgF$_2$ dielec. multilayer coatings, prep. and props. 0=16881
PbCl$_2$, TlCl- or BiCl$_3$-doped, electrolytic cond. 3=17926
PbCl$_2$–TlCl system cpds., X-ray obs. 4=26655
Pb CO$_3$ i.r. absorpt. 2=8531
Pb CO$_3$ suspension, light transmission meas. 2=10992
PbC$_2$O$_4$, permittivity and dielec. losses, at low frequencies, 15°C 4=1654
PbCo$_{1/3}$Nb$_{2/3}$O, ferroelectric properties 1=12473
PbCo$_{1/3}$Ta$_{2/3}$O$_3$, ferroelectric properties 1=12473
Pb–Cu dilute solns., density, 650–800°C 2=7204

Lead compounds—contd

PbCuSO$_4$(OH)$_2$ (linarite), crystal structure 0=12052
PbF, visible bands, rot. anal. 4=20051
PbF$_2$, aerosols, phase changes 3=1402
PbF$_2$, crystal growth from liquid, forms occurring during different conditions 4=4541
PbF$_2$, crystal structure by neutron diffraction 1=15091
PbF$_2$, dielec. multilayer u.v. high-μ material 0=2237
PbF$_2$, exciton band at 2190 A 3=24050
PbF$_2$ films, crystalline, absorption spectra 4=2065
Pb F$_2$, u.v. filters 2=7379
Pb F$_2$, use in dielectric mirror systems 2=1251
Pb F$_4$, crystal structure 2=21519
PbF$_2$–Na$_3$F$_6$Al coatings, ageing and use in u.v. 4=24376
Pb(Fe$_{1/2}$Nb$_{1/2}$)O$_3$ ferroelec.–antiferromag. props. 3=6615
Pb(Fe$_{1/2}$Nb$_{1/2}$)O$_3$, ferroelec. and antiferromag. props. 2=12562
Pb$_2$FeNbO$_3$, ferroelec. props. 2=18769
Pb Fe$_{12}$O$_{19}$, dislocations, vis. by etching 2=18587, 23176
PbFe$_{12}$O$_{19}$ (magnetoplumbite), growth spirals on synthetic crystals 1=9113
PbFe$_{12}$O$_{19}$, thickness dependence of domain structure 1=14707
PbFeTaO$_6$, ferroelec. props. 2=18769
Pb$_2$FeTaO$_6$, prep. and ferroelec. props. 0=638
Pb(FeTa)$_{0.5}$O$_3$–PbTiO$_3$ system, prep. and ferroelec. props. 2=12567
Pb(FeTa)$_{0.5}$O$_3$–PbZrO$_3$ system, prep. and ferroelec. props. 2=12567
Pb(Fe$_{2/3}$W$_{1/3}$)O$_3$ ferroelec.–antiferromag. props. 3=6615
Pb(Fe$_{2/3}$W$_{1/3}$)O$_3$, ferroelec. and antiferromag. props. 2=12562

Pb–Ge system, Ni distribution and interaction 1=17517
PbH$_4$, indirect p–Pb spin coupling meas. 4=15382
PbHfO$_3$, complex dielectric const., study 4=1666
PbI$_2$, absorption, reflection and luminescence at 4°K 1=1160
PbI$_2$, absorption spectra 0=10037
PbI$_2$, absorption spectra, exciton contrib., temp. depend. 1=1161
PbI$_2$ aerosols, ice-forming props., cloud seeding 3=8987
PbI$_2$, anomalous absorption at critical thickness 2=689
PbI$_2$, crystal decomposition, electron microscope study 0=21175
PbI$_2$, dislocation loops due to fission fragments 2=23185
PbI$_2$, elec. cond. rel. to photodecomposition 3=2921
PbI$_2$, exciton absorption spectrum, rel. to photocond. and luminescence 2=8400
PbI$_2$, exciton spectra at 4.2°K 3=2765
PbI$_2$ films, prep. and optical props. 1=17892
PbI$_2$, fission fragment damage 3=20253
PbI$_2$, fission-fragment tracks 3=25306
PbI$_2$, helical dislocations 1=11203
PbI$_2$, ice growth on 0=6335
PbI$_2$, luminescence, rel. to absorption 3=6669
PbI$_2$, optical absorpt., effect of high elec. field 2=10583
PbI$_2$, optical props. and chemical decomposition 4=26202
PbI$_2$, photo recording mechanism 4=21323
PbI$_2$, photoconduction extinction effect 3=17960
PbI$_2$, precip. of Pb on decomp. by electron bomb. 1=17589
PbI$_2$, resonance spectra 0=9381
PbIn alloy film, supercond., current–voltage curve 4=14530
Pb–In, density and phase diagram 3=25731
Pb–In, n.m.r. of In^{115}, absence of quad. effects 4=20615
Pb–In, n.m.r. of Pb^{207}, Knight shifts and linewidths 4=4428
Pb–In, stacking faults 1=12395
Pb–K Fe garnet, magnetic exchange anisotropy 4=13230
(Pb, M)Nb$_2$O$_6$, M = Ca, Sr, Ba, X-ray structure study 0=14035
Pb$_3$MgNb$_2$O$_9$, dielec. props. 0=7974
PbMg$_{1/3}$Nb$_{2/3}$O$_3$, ferroelec. and optical props. 2=663
Pb(Mg$_{1/3}$ Nb$_{2/3}$)O$_3$–Pb(Ni$_{1/3}$Nb$_{2/3}$)O$_3$, diffuse phase transitions, relax. polarization 1=6195
PbMg$_{1/3}$Ta$_{2/3}$O$_3$, ferroelectric properties 1=12473
Pb$_2$MgWO$_6$, antiferroelectric polymorphic transition point rel. to press. 3=17945
Pb$_2$MgWO$_6$, crystal structure 2=23459
PbMgWO$_6$, prep. and ferroelec. props. 0=638

Lead compounds—contd
Pb_2MgWO_6, solid solutions, antiferroelec. and ferroelec. props. 0=7978
$PbMg_{\frac{1}{2}}W_{\frac{1}{2}}O_3$, elastic yield, internal friction, anomaly, near antiferroelectric Curie point 4=1953
$PbMg_{1/2}W_{1/2}O_3$ solid solution, antiferroelectric properties 1=12478
Pb_2MgWO_6—$PbTiO_3$ solid solutions, crystal structure 3=23459
$PbMoO_4$, absorption and luminescence 3=20479
$PbMoO_4$ (wulfenite), crystallization under hydrothermal conditions 4=26602
$PbNO_3$, NO_2 and NO_3 due to irradiation 4=17682
$Pb(NO_3)_2$, aqueous solution, compressibility 0=14640
$Pb(NO_3)_2$, chemical γ damage, annealing, effect of crystal imperfections 4=4714
$Pb (NO_3)_2$, dielectric const., microwave region 4=7026
$Pb(NO_3)_2$, elastic and thermoelastic props. 3=18161
$PbNO_3$, i.r. spectra 2=6580
$PbNO_3$, lattice frequencies, rotational barriers 2=16835
$Pb(NO_3)_2$, elastic const. meas. 1=20284
$Pb(NO_3)_2$, magneto-optic studies 0=2934
$Pb(NO_3)_2$, phase transitions in crystals of T_h^6 symmetry 0=18343
$Pb(NO_3)_2$–$Sr(NO_3)_2$–H_2O, u.s. vel. and adiabatic compress. 2=17459
$Pb_{1.5}Nb_2O_{6.5}$, conduction props. 4=26120
$PbNb_2O_6$, elec. cond., control by doping 2=16685
$PbNb_2O_6$, with 40% $BaNb_2O_6$, prep. and ferroelec. props. 2=14616
$PbNb_2O_6$, preps. and props. 2=14951
$Pb(Nb_{0.5}Sc_{0.5})O_3$, ferroelectric, crystal structure 1=1405
$PbNb(Zr, Ti, Sn)O_3$, elec. energy release, by temp. and press. enforced phase transitions 4=4216
$Pb_3NiNb_2O_9$, dielec. props. 0=7974
$Pb_3NiNb_2O_9$, dielec. props., freq. and temp. depend. 0=18091
$PbNi_{1/3}Nb_{2/3}O_3$, ferroelec. and optical props. 2=663
$Pb_3NiNb_2O_9$—$Pb_3MgNb_2O_9$, crystal structure 1=11572
$Pb_3NiNb_2O_9$–$Pb_3MgNb_2O_9$ polarization mechanism 0=629
$PbNi_{1/3}Ta_{2/3}O_3$, ferroelectric properties 1=12473
PbO, activation energy, rel. to temp. 3=17978
PbO, Bordoni peaks 3=23294
PbO, with cation impurities, conductivity, disorder phenomena and colour 3=13075-6
PbO, colouring by illumination and elec. fields 1=12462
PbO, crystal structure 1=20451
PbO crystals, photoconductivity 3=6635
PbO, effect on Bi_2O_3 polymorphism 4=23253
PbO, electron–hole pairs, X-ray formation, energy 2=2066
PbO, films, optical props. and uses 2=6537
PbO films, prod. and light refl. 3=8927
PbO films, treated with S, Se, Te, elec. and photocond. 1=3770
PbO, PbTe, i.r. band system 3=22543
PbO, photocond., contact influence 2=8412
PbO, photocond., nature of photoactive centres 2=10532
PbO, photocond. overshoot, space charge model 2=18748
PbO, photoconductivity surfaces, in n–PbS–p–PbO films, in Resistron charge-storage tubes 3=25419
PbO, prep. of layers and elec. props. 2=2192, 8438
PbO, red and yellow, crystal structure, effect of neutron irrad. 4=26564
PbO, rotational absorption bands 1=14006
PbO, Schumann u.v. absorption spectrum 1=17893
PbO, self-diffusion of O, oxidation process 3=20230
PbO solid electrolyte voltaic cell 4=2162
PbO, surface sorption and elec. cond. processes 2=4065, 8439
PbO, tetragonal, crystal structure 2=4413
PbO, Vidicon target, fatigue model 2=23466
Pb—O system phase relations, 3-1400 bars 4=29214
PbO_2, crystals, thermal expansion 1=918
PbO_2, n.m.r. meas. of Knight shift 1=3950
PbO_2, sputtered films, elec. props. 3=2919
PbO_2, tetragonal, oxygen parameter 3=1329
$PbO.2B_2O_3$, atomic crystal structure 4=15787
PbO-B_2O_3 glasses, structure, by n.m.r. 3=18148
PbO—B_2O_3 system, fused, structure analysis 1=1443
$PbO.Fe_{12-x}Al_xO_{18}$, ferromag. and antiferromag. props., 1.3-300°K 0=13839
$PbO.xFe_2O_3$, ferrimagnetism, Mössbauer study 4=26335
$PbO(Fe_2O_3)_6$ (magnetoplumbite), domain structure 0=10151

Lead compounds—contd

ions, Li$^+$, n.m.r. shielding constant 2=1970
ions, Li$^+$, photoionization cross-section calc. 2=13541
ions Li$^+$, scatt. in CCl$_4$, by Debye–Ehrenfest theory 2=20049
ions, Li$^+$, S-states, variational calc. 3=22471
ions, Li$^+$—Li charge exchange, resonant 3=16909
ions, Li^{2+}—Li charge exchange, resonant 3=16909
ions, luminescence of Li-irradiated CaSiO$_3$ 2=724
ions, negative, electron—electron and electron—nuclear energies 4=1178
ions, ^{2}S ground state, wave-functions 0=15643
ions, in solids and gases, range and energy loss 2=7674
isotope abundance meas. by mass spectrometer 0=7706
isotope separation, concentration dependence 4=20000
isotope separation by crystallization of compounds 0=1474
isotope separation, Li^{6,7}, by viscous flow 4=1232
isotopic anal., spectral methods 1=3526
isotopic analysis, mass spectrometry 0=3812
isotopic composition and concentration in solns., spectral det. 2=866
isotopic composition, spectroscopic analysis 1=13971
isotopic effect of Li ions in countercurrent electromigration in molten LiBr and LiI 0=1959
K-emission bands meas. 3=8605
K-emission spectrum 0=20732
lattice dynamics, anisotropic dispersive, continuum model 4=1368
lattice parameters, isotope effect, temp. depend. 2=15018
liquid, conduction e.s.r. 3=5450
liquid, electrical resistivity 1=5283
liquid, viscosity, effect of isotopic mass 3=125
mag. susceptibility at low temp., change at phase transition 1=1193
magnetoresistance 3=10726
martensitic transformation, volume change 0=21188, 21243
mass spectra anal. 0=9098
mechanical properties rel. to transitions (1.5° to 300°K) 1=11508
melting point, up to 3 × 10^4 kg/cm^2 2=23080
metal containing 99.3% Li^6, sp. ht. 20–300°K 0=15813
metallic, mag. susceptibility 0=8029
metallography, low-temp. 2=21543

Lithium—contd
miscibility with Li halides 2=15577
molecular beam, velocity analysis 2=20888
molecule, elec. polarizability tensor calc. 4=1256
molecule, excitation energies, calc. 0=17798
molten, pure, isotope diffusion meas. 4=24195
moving edge dislocations 3=10654
n.m.r., anomalous linewidth 4=20618
n.m.r., electronic structure 0=4530
n.m.r. of Li^6, using double resonance with Li^7 4=10339
n.m.r. saturation at 10.7 Mc/s 3=8736
nuclear magnetic spin absorption spectra 2=6699
nuclear resonance study in metal 1=6429
nuclear spin-lattice relaxation time, 1.1–4.2°K 0=3140
orthogonalized plane wave form factors 3=25229
Overhauser effect meas. at 1.5°K 4=4427
Overhauser effect in metallic Li 0=1836
paramagnetic suscept. by e.s.r. saturation 4=4331
particle detectors, high-energy 3=17114
particle detectors, ion drift 2=3215
plasma, electron–ion, synthesis and props. 1=18828
positive ions, 5—25 keV, sputtering of Cu 1=8363
positron annihil. momentum distrib. 4=12719
positron mean life 0=9342
precipitation in Ge 0=12078
use of, as projectile propellant 0=59
self-diffusion, pressure depend. on 7000 atm 2=10415
soft X-ray emssion spectrum 0=20731
solutions in ethylamine and NH$_3$, e.s.r. 1=16600
specific ht., below 30°K 4=6745
specific heat, calc. from elastic constants 2=8166
specific heat, 20-300°K, martensitic transformation 0=7852
sputtering, absence of isotopic separation 2=227
stacking faults, electron scatt. study 2=2085-6
in stars, Li^6/Li^7 ratios in F5-G8 dwarfs 4=29380
stress/strain at 1.4—77°K 1=12594
synthesis, early history of solar system 1=10373
target thickness meas., from Li^7(p, n)Be^7 flight-time 4=27713
thermal conditivity in molten Li, 320° - 830° C, expt. 4=16106
thermodynamic properties, and "is" diagram 2=2708
thin films, investigation of props. by reaction Li^7(p,n)Be^7 1=1454
transformation at low temp., deformation-induced, dilatometric study, rel. to elastic props. 4=10430-1
twilight emission, changes in Nov. 1962 3=13782
twilight, high abundance, due to thermonuclear explosion, high altitude 3=18554-5
u.v. spectrum, Li$_2$ rotational anal. 1=3547
in upper atmosphere origin 2=15213
in upper atmosphere, rel. abundance 2=24028
vaporization, in arc, electric, var. with sample composition 4=484
vapour pressure, correlation 3=14423
vibration frequencies and specific heat by electron gas modification 1=8880
vibration spectra and spec. heat, calc. 3=12914
vibrational spectrum, and specific heat calc. 2=16592
X-ray attenuation, total cross-section 1=6220
X-ray emission spectrum, valence band 3=8606
X-ray scattering by single crystal 0=13983-4
X-ray (soft) emission spectra, with photon-counting spectrometer 1=7439
zone-refining, two-stage technique 4=17787
in GaAs, solubility and electrical behaviour rel. to doping 3=10818
in Si, rel. to localized vibr. 4=17346
Li$^-$, electron affinity and stability calc. 4=9643
Li$^+$, double charge exchange in inert gases 0=14978
Li$^+$ ion source from Li$_2$O.Al$_2$O$_3$.2SiO$_2$ filament coating 1=16433
Li$^+$ isotope shift calc., 2^{1}P, 2^{3}P 4=6464
Li$^+$, Lamb shift of first excited state 3=7328
Li$^+$, photo-ionization 3=25047
Li$^+$, photoionization cross-section calc. 3=5621
Li$^+$, scatt. by inert gases, 7-60 keV 4=3818
Li$^+$, 2^{3}S state, twenty-parameter calc. 3=2561
Li III excitation in vacuum sliding spark 4=18765
Li$_2$ molecule, core polarization, calc. 1=8847
Li$_2$ molecule, electronic structure, LCAO computation 3=25098

Lithium—contd
- Li$_2$ molecule, quadrupole coupling const. 1=12150
- Li^{2+} + H, charge exchange cross-section, matrix calc. 4=29871
- Li^4, existence, from photon scatt. by Li^7 4=1005
- Li^4, search for in He^3(p, γ) reaction 0=2660
- Li^6 enrichment of Li$_2$SO$_4$ by electrolysis at 630°C 0=11496
- Li^6 and natural Li, elec. resistivity 1=17608
- Li^6 spectral isotopic analysis 0=9748
- Li^{6,7}, n. m. r. Knight shift diff. calc., due to lattice vibr. 4=7352
- Li^7 diffusion through W, 1500°K 3=8455
- Li^7 resonance, Knight shift and line width 0=21084
- Li$^{7(+)}$, scatt. by inert gas atoms, theory 4=6509
- Li$_2^7$ electronic excited states 0=17765
- Li^7 and Li^6, solid, electronic specific heat 1=17421
- Li^8 ions, range in H$_2$, D$_2$ and He, 40 - 450 keV 1=7107
- Li–B ion pairing, effect on Li$^+$ drift in Si 0=15940
- Li$^+$–H$_2$ interaction, 5 to 25 keV 3=4005
- Li$^+$–He interaction, 5 to 25 keV 3=4005
- Li$^+$, 1s2s ^{1}S level 3=2569
- Ni–C, crystallization, effect on, as impurity 3=16115

Lithium compounds
- alloys with Mg, In, Al, thermoelec. power 2=6509
- ferrites, elastic props., anomalies 3=5061
- ferrites, magnetostriction, near compensation point 1=3907
- ferroelectric compounds, nuclear quadrupole resonance of Li 2=18972
- fluoride, liquid, adiabatic compressibility, from u.s. vel. 3=5440
- halides, aqueous solutions, u.s. velo. adiabatic compressibility 3=18812
- halides, diffusion of He, prod. by n irrad. 3=15508
- halides, gaseous, diatomic, thermodynamic props., 0-6000°K, calc. 0=963
- halides, lattice vibrations, calc. 0=2782
- lattice vibration spectrum, calc. 2=20921
- lithium selenite, dielectric constant change during switching 1=11338
- T release, thermal, on neutron irradiation 3=23552
- Li acetate, u.s. vel. 2=15589
- Li aluminate, internal elec. field, by e.s.r. 2=12645
- Li borosilicate glasses, Ce active, scintillation 2=13704
- Li chromite ferrite, magnetoelec. props., temp. depend. 2=623
- Li ferrite-aluminate, crystallographic and magnetic props. 4=15651
- Li ferrite-chromite, elec. and galvanomag, props. 0=13830
- Li ferrite, disordered, ferrimag. reson. 3=5033
- Li ferrite, Fe^{57} hyperfine field and n. m. r. 2=18962
- Li ferrite (Fe$_5$LiO$_8$), ordered, Fe^{57} n.m.r. 3=1204
- Li ferrite, ferromag. reson. line width 4=26360
- Li ferrite, ferromag. resonance, order—disorder effects 4=28863
- Li ferrite-gallate, crystallographic and magnetic props. 4=15651
- Li ferrite (LiFe$_5$O$_8$), h.f. magnetization processes 1=12538
- Li ferrite, mag. field at nucleus, from Mössbauer effect 1=14745
- Li ferrite monocrystals, ferromag. resonance 0=11927
- Li ferrite monocrystals, influence ionic order on mag. props. 0=10124
- Li ferrite, neutron irrad., effect on structure and mag. props. 4=13242
- Li ferrite, polycryst., dispersion of complex permeability 1=20129
- Li ferrite, square-loop props., effect of grain size 3=15876
- Li halide dimers, i.r. spectra 1=7470
- Li halides in inert matrices, i.r. spectra 4=25652
- Li halides, miscibility with Li 2=15577
- Li halides, vapours, fragmentation patterns and ionization 2=13534
- Li hydrazinium sulphate, ferroelec., and struct. 4=20420
- Li hydride and deuteride, props. of single crystals 1=7697
- Li hydroselenite prep. and ferroelec. props. 2=14620
- LiAl, n.m.r., rel. to crystal structure 3=11122
- Li-Al, soft X-ray emission spectra 1=1174
- LiAlF$_4$, i.r. absorption spectrum of vapour 3=22553

Lithium compounds—contd
- LiAlH$_4$, catalytic active centres, investigation by e.s.r., n.m.r. 4=2156
- Li$_{0\cdot5}$Al$_{2\cdot5}$[Ga$_{2\cdot5}$]O$_4$, e.s.r. of Fe^{3+} 4=26404
- LiAlO$_2$, i.r. absorption spectrum 2=2239
- LiAl$_5$O$_8$, Li^7 and Al^{27} n.m.r. determ. of electrostatic field gradient parameters and structural distortion 4=17696
- LiAlPO$_4$F, amblygonite, structural anal., superposition method 0=14033
- LiAlPO$_4$(OH, F) (amblygonite), crystal structure 0=4649
- LiB, thermal dissociation in Si, recombination kinetics 1=11302
- LiBF$_4$, aq. soln., X-ray analysis 4=21100
- LiBC$_2$, crystal structure 4=23451
- LiBO$_2$, thermodynamics of vaporization 3=25809
- LiBO$_2$, vaporization, mass-spectrometric study 3=25807
- LiBr dimers, thermodynamic functions 0=17854
- LiBr, energy losses of 30 kV electron beam 3=15478
- LiBr, fused, refractive index rel. to temperature 3=11796
- LiBr, i.r. lattice refl. spectrum analysis 4=1737
- LiBr, spin–lattice relax., temp. depend. 3=11118
- LiBr, spin-lattice relaxation due to translational diffusion 3=18143
- Li$_2$C$_2$, unit cell, space group, X-ray diffrn. 3=6843
- Li$_2$CO$_3$, molten, struct., by X-ray diffr. 2=15565
- Li$_2$CO$_3$, thermodyn. props. at high temps. 3=22663
- LiCaCl$_3$.2H$_2$O, antiferromag. resonance at liq. He temp. 3=15929
- LiCl, aq. soln., Sn^{4+} recomb. luminesc. 2=21912
- LiCl, aq. solns., with CaCO$_3$, 350-500°C, 100-1800 atm 1=15863
- LiCl, cohesive energy rel. to virial theorem 2=12362
- LiCl, Debye temp., Houston and Blackman methods of evaluation 4=12651
- LiCl defect properties rel. to electrical breakdown 1=11215
- LiCl defect properties rel. to electrical breakdown 1=12391
- LiCl dimers, molec. structure and thermodynamic functions 0=17854
- LiCl, electron energy loss spectra 2=3889
- LiCl, energy losses of 30 kV electron beam 3=15478
- LiCl, F-centre electronic structure 1=11238
- LiCl, F-centres, optical absorption and e.s.r. 1=995
- LiCl, fused, refractive index rel. to temperature 3=11796
- LiCl, heat capacity from 15 to 325°K 0=17891
- LiCl, hole bands 2=6304
- LiCl, i.r. lattice refl. spectrum analysis 4=1737
- LiCl, i.r. spectra, by matrix isolation 3=22544
- LiCl, K-absorpt. spectrum of Cl 3=6660
- LiCl, liquid state structure 0=19114
- LiCl, M-centres, electronic structure calc. 4=12813
- LiCl, microwave spectrum 4=12459
- LiCl, n. m. r. of Li^7 4=3917
- LiCl, Raman spectrum 2=18850, 23577
- LiCl, recombination coeffs. 2=5305
- LiCl, v.p. and vapour thermodynamic props. 4=18498
- LiCl, F-centre electron, excited states, calc. 4=6885
- LiCl-KCl fused salt mixtures, conductivity, d. c. meas. 4=24232
- LiClO$_3$, molten, density 4=24186
- LiClO$_3$, molten, elec. conductance, effect of impurities 2=15148
- LiClO$_3$ molten, i. r. refl. spectrum 2=14275
- LiClO$_3$–H$_2$O fused system, complex ions and spectrum 4=183
- 3LiClO$_3$.H$_2$O, X-ray K-absorpt. spectra of Cl 3=23090
- LiClO$_4$.3H$_2$O, X-ray K-absorpt. spectra of Cl 3=20498
- LiClO$_3$ and LiClO$_3$–LiNO$_3$ molten salts, thermodynamic props. 4=29620
- LiClO$_4$, liq., i. r. refl. spectrum 2=14275
- LiCrGeO$_4$, tetrahedral coord. of Li, i.r. spectrum 3=13175
- LiCrO$_4$, crystal structure, X-ray photos 4=29119
- Li$_2$CrO$_4$, n-irradiated, thermal annealing kinetics 3=17700
- Li$_3$CrV$_2$O$_8$, lattice structure 4=13593
- Li-Cu-Al and Li-Zn-Al systems, crystal structures 4=23452
- LiCuCl$_3$.2H$_2$O, antiferromagnetism and n.m.r. 1=20165
- LiCuCl$_3$.2H$_2$O, crystal and antiferromagnetic structure 4=7301
- LiCuCl$_3$.2H$_2$O, heat capacity 1=19716

Lithium compounds—contd

$LiCuCl_3.2H_2O$, magnetization, proton relaxation time 2=4289
$LiCuCl_3.2H_2O$, n.m.r. and heat capacity studies rel. to antiferromagnetism 3=1205
$LiCuCl.2H_2O$, paramag. and antiferromag. states overlap 2=8609
$LiCuCl_3.2H_2O$, structure and magnetic props. 0=12047
LiD, in exploded Li wires, neutron pulses 2=7588
LiD, i.r. absorption, 12.5-25μ 0=18127
LiD molecules, deuteron quadrupole coupling, calc. 2=6225
LiD, rotational mag. moment 3=15337
$LiEuO_2$ crystal structure, atomic 4=4611
LiF, absorpt. and refl. spectra in u.v. 3=8596
LiF, absorption spectra in extreme u.v. 1=19980
LiF, absorption spectra, 1100 to 6000A, 80° to 673°K, 4=1738
LiF, absorption spectrum, vacuum u.v., β-irrad. effect of bleaching and immersion 3=13178
LiF, adsorbed water, dielectric admittance 3=10880
LiF, activated by $UO_2(NO_3)_2$, luminescence 2=18861
LiF, bicrystals, grain boundary migration 4=23531
LiF, Bordoni peaks 3=23294
LiF, catalytic action rel. to dislocations 4=6841
LiF, charged dislocations 1=14275
LiF, charged dislocations, in strong elec. fields 0=20817
LiF cleavage faces, by X-ray observation 1=11208
LiF cleavage plane, He and Ar molec. beam scattering 3=2680
LiF, coating on Al mirrors, extreme u.v. reflectance 1=16070
LiF, colloidal Li due to neutron-irrad. 4=6901
LiF, coloration layer after deuteron irrad. 4=4082
LiF, coloration by various radiations 3=25298
LiF, colour centres 3=22836
LiF, colour centres due to electron pulses 3=8460
LiF, colour centres rel. to flow stress 3=2835
LiF, colour centres, identification 3=10694
LiF, colour centres, by irradiation, line and band spectra 3=6540
LiF, colour centres and thermal bleaching 2=16668
LiF, coloured, i.r. absorption, phonon-free transitions 4=17573
LiF, coloured, sharp absorpt. lines meas. 3=814
LiF, compression textures at 75 tons/in^2 1=20700
LiF containing 0.3% AgCl, thermoluminescence and thermally stimulated cond., model 4=10210
LiF containing Mg, colour centres, optical absorption 4=15501
LiF, correlation energy 4=12507
LiF, crack formation, due to dislocation piling up 0=17932
LiF, cross-relaxation 0=4521
LiF, crystal dislocations, jump motion, etching effect 3=20201
LiF crystal, elastic wave propag. 1=11808
LiF, crystal face, dislocations arrangement 2=6333
Li^7F, crystal growth 3=18261
LiF, crystal growth, dry method 3=23404
LiF, crystal growth, by floating zones 3=6825
LiF, crystal growth and $(OH)^-$ impurities 2=2079, 8211
LiF crystal, plastically deformed, surface study 1=2509
LiF, crystal structure changes due to bombardment with alumina particles, annealing study 4=4044
LiF crystals, deformation, effect of surface charge 3=6773
LiF crystals, dislocation multiplication 0=7884
LiF crystals, intensity profiles of electron diffraction lines 0=272
LiF crystals, lattice expansion by neutron irrad. 4=10539
LiF crystals, neutron irradiation effects 0=7907
LiF crystals, nuclear double resonance 0=16188
LiF crystals, optical bleaching of R-bands 1=10102
LiF crystals, strain hardened, behaviour of individual dislocations 0=7885
LiF crystals, terraces on etch-pits 0=10289
LiF crystals, vacancy formation by reactor irrad. 4=9946
LiF crystals for X-ray monochromator, polarization factor importance 4=27600
LiF, damage by sliding and wear 3=11189
LiF, Debye temp., Houston and Blackman methods of evaluation 4=12651
LiF, defects and dielectric losses, due to neutron irrad. 2=659

Lithium compounds—contd

LiF, defects, due to X-ray irrad., low-temp. annealing 0=2836
LiF, defects after low-temp. neutron irrad. 4=1541
LiF, die-forming for X-ray monochromators 1=13145
LiF, dielec. props. and thermolum. after X-irrad. 3=8479
LiF, dielectric const., 8 mm, by shorted-line waveguide 3=22973
LiF, dielectric constant, var. with pressure 2=14603
LiF, dielectric consts., theory 0=10011
LiF, dielectric losses, effect of annealing 1=17821

crystals with rare-earth ions, fluorescence spectra 3=12350
crystals, relaxation processes 0=1743
crystals, thermoluminescence, activation energy det. from glow curves 0=4465
cubic crystal anisotropic centres 0=9908-9
cubic crystals with local centres 2=18785
decay curve analyser, differential delay, four-channel 4=22939
decay curves 0=10056
decay meas., "ballistic" method, theory of galvanometer 2=2873
decay meas., by spectroscopic light source with chopper, electronic 3=21554
decay meas., ~ 10^{-4} sec., oxygen phosphors, u.v. 3=8614

Luminescence—contd
decay and risetimes in molecular crystals 2=6559
decay, 10^{-8}-10^{-4} sec region, measurement, using modulated light beam 0=18134
decay time meas., apparatus 0=1756
deep trapping states, dielec. effects study 2=6591
de-excitation effect of X-rays 3=13197
detonation front, temp. meas. 0=10814
dielectrics resonant spectra rel. to temp. 2=8493, 14699
diffusion processes in polymer adhesion, method of investigation 0=3162
donor–acceptor orientation for max. triplet–triplet energy transfer 4=22931
donor molecules, decay, effect of dipole–dipole resonance transfer 5=25773
dyes, quenching, dipole moment intermol. interaction 4=22442
edge, relationship to fundamental absorption edge 1=17906
efficiency, relative, variation with temp. 1=14639
electrodes, in insulating oil gaps 0=3541
electrolysis, Al, near anode and cathode, flash spectra 3=10984
electron excitation energy transfer, by virtual-exciton mechanism 0=21011
electron excitation by virtual excitons, migration of energy 1=6225
electron excited, growth and decay, theory 2=723
electron penetration into luminescent material 1=11405
electron processes, kinetics 1=6079-82
electron range in phosphors, at 1-10 keV, meas. using light output 0=5547
electron transition, group, theory 2=2245
energy transfer in sensitized phosphorescence, probability 0=944
energy transfer in solutions, temp. and viscosity effects 1=10515
excitation intensity, depend. on energy storing depth 0=2958
exciton 1=947
fluorescence anisotropy, from solutions, meas. with uncalibrated glass plates 0=19394
fluorescence distribution from disk-shaped cuvette 1=4430
fluorescence emission anisotropy meas. 3=11900
fluorescence intensity, temp. depend., significance 1=6224
fluorescence, K-shell, yield of several atoms 0=5851
fluorescence, lifetime and intensity relationship 3=8613
fluorescence, meas. of polarization 1=8128-30
fluorescence modulation by light and r.f. waves 1=17276
fluorescence polarization, meas. with spectrofluorimeter 4=14401
fluorescence quenching, outer and inner mechanism of excited-molecule reactions 1=6059
fluorescence, resonance, due to pulsed or modulated light, theory 4=9661
fluorescence of solns., Vavilov's law 2=13346
fluorescence of solutions, meas. of polarization 0=14661
fluorescence spectrometer, calibration 2=11483
fluorescent materials, incident radiation—emitted radiation relationship, photometry 3=18019
fluorescent scanning microscopy 1=1463
fluorometer for decay time meas. 0=3538
fluorometer, double-beam 3=21013
fluorometer, lifetimes, 10^{-5}—10^{-9} sec, by modulated light 3=5514
fluorometer, phase 2=2874
fluorometer, phase-sensitive, lifetimes meas. 3=3869
flux-prepared phosphors, e.s.r. study of activator state 1=14636
glow curves, electron transitions, unusual effects 2=709
group transitions in solid phosphors 1=14651
harmonic oscillator system, polarization 0=17758
heat into light conversion 0=10049
N-heterocyclics, $\pi^* \rightarrow \pi$ and $\pi^* \rightarrow n$ phosphoresc. polarization 4=1296
high-energy radiation damage 1=3697
high pressure cell 4=28658
hydrocarbons, aromatic, two-quantum transitions in phosphorescent state 4=6641
impurity centres, absorption coeff. and emission intensity, wavelength and elastic const. depend. 0=11768
impurity centres, band structure, quantum-mechanical model 1=14625

Luminescence—contd

- impurity centres, thermal transition probability, elastic const. depend. 0=11769
- impurity crystals, thermoluminescence, theory 1=20034
- impurity crystals, thermoluminescence, theory 2=4194
- impurity fluorescence in crystals 0=20993-4
- intensity and polarization, primary and secondary, theory 4=9685
- interference of emission from evaporated phosphor 2=6618
- ionic crystals, centres, electronic—vibrational processes 3=20501
- ionoluminescence, theory 2=21279
- kinetics, special cases 1=17907
- and laser material threshold meas. 4=16689

- luminescence kinetics, special cases 1=17907
- lunar rocks, rel. to spectropolarimetry 1=18028
- M-centres, macroscopic approx. 1=1154
- macromolecules, polarization, rotating emission group, calc. 4=1329
- meas. of fluorescence lifetimes in mμsec region 1=2458
- meas., nanosec decay region 3=15697
- meas., oscillograph phosphoroscope 1=14639
- meas., stroboscopic, electronic instrumentation, simple 3=13198
- measurement, ellipsoidal fluorimeter 2=2457
- measurement, fluorescence spectra of solids 2=22040
- measurement, phosphoroscope for study of decay at different temps. 3=18020
- measurement, spectrofluorophosphorimeter 4=29754
- measurements, calibration of spectrofluorimeter for 240-660 mμ emission 2=22027
- measurements of polarization and spectra, using SF-4 spectrophotometer 2=22028
- mechanism of intramolecular heavy atom effect 4=28249
- mechanism and use in power amplification 0=7055
- mechanism of transitions to metastable states 1=14643
- microscopic obs. 4=26684
- microscopy 3=24012
- in microscopy, spectral anal. apparatus 0=14805
- microspectrofluorimeter, rapid scanning 0=14826
- model, reaction kinetic, with five transitions 2=6487
- molecular crystal, luminescence of free exciton 1=3853
- molecular crystals, excitation energy transfer 0=2949
- molecular crystals, exciton luminescence, defects, "polariton" model 1=3851
- molecular crystals, impure, quenching 3=20144
- molecular crystals, rel. to molecular distortion zone structure 4=6806
- molecular crystals, polarization, birefringence effect 2=10614
- molecular crystals, re-absorption effects 0=1742
- molecular fluorescence method of film thickness meas. 1=5245
- molecular luminescence decay, effect of reabsorption in a plane-parallel layer 4=9686
- molecules, use in biological research 3=13942
- molecules, complex, efficiency rel. to temp. 2=14261
- molecules, complex, theory 3=10488
- molecules, effect of vibrations on polarization 2=2007
- molecules, fluorescence lifetimes meas. 4=17271
- molecules, lifetime, rel. to absorpt. intensity 2=20782
- molecules, polarization meas., photoselection method 3=15370

Luminescence—contd

- molecules, possibility of appearance, quantum mech. calc. 1=6033
- molecules with three energy levels, nonlinear effects 2=16507
- molecules, universal reln. to spectra, rel. to excited states 3=15320
- monochromator, grating transmission correction 4=317
- nanosecond scintillation decay times, meas. 1=8227
- negative absorption due to excited molecules 1=14017
- new constant-brightness phosphors with active activators, applications 0=18589
- nonphotoconducting phosphors, properties, fundamental equation 1=9000
- nonradiative transitions in local centre, theory 3=15455
- optical-maser materials, meas. with Michelson interferometer 3=7353
- organic molecules, fluorescence symmetry rel. to electronic transitions 3=2635
- organic molecules relation to absorption spectra, mirror-image relation 3=23892
- organic, phosphorescence polarization 1=17916
- organic substances, α-phosphorescence rel. to temp. 3=3063
- oxygen phosphors, u.v., decay meas., $\sim 10^{-4}$ sec. 3=8614
- paints, colour rel. to light source 3=14307
- "paramagnetic resonance" as multi-photon process 4=13066
- phosphor, constant-acting, rel. to temp. 2=708
- phosphor dead voltages, excitation conditions influence 1=20027
- phosphorescence, concentration extinction 2=18874
- phosphorescence decay mechanisms, distinction by new phosphorometer technique 0=18142-5
- phosphorescence decay, rel. to trapping-level distribution in crystals 1=11392
- phosphorescence duration, at-196°C 1=33866
- α-phosphorescence and luminescence polarization, particle system with 3 energy levels 0=16075
- phosphorescence, two-step excitation 0=661
- phosphors, activated, impurity-centre band-shape 2=14707
- phosphors activated with rare-earth metals 0=1767
- phosphors, build-up and decay, initial stages 2=8565
- phosphors, decay, final stages, with various levels 1=20026
- phosphors, n-type, polarization processes 2=10550
- phosphors, phosphorescence polarization 1=17916
- phosphors, powdered, photocond., continuous meas. 2=2190
- phosphors with several types of traps 0=10071
- photoconductor, field ionization of traps 0=1740
- photoconductors, persistent internal polarization 2=4089
- photoexcitation rel. to trapping centres parameters 2=14705
- photographic emulsions, temp. depend. 3=16813
- photoluminescence of solutions, quenching theory 1=11765
- photoluminescent effect in contact electroluminescence 1=17924
- photometer, for phosphorescence studies 0=19392
- photomultiplier tube faces 0=2462
- pigments in perspex, transfer of excitation 2=4164
- planetary atmospheric fluorescent scattering 2=15310-11
- plastic scintillators, concentration effects 2=6638
- polarization 3=18017
- polarization, rel. to decay 1=16123
- polarization, photoselection 1=17331
- polarized photoluminescence, decay processes 1=14650
- polarized, vector-parametric investigation methods 2=14708
- powders, rel. to optical constants 3=10901
- practical uses, Communist Party congress 3=15701
- pressure effects 1=20019
- pressure effects on phosphor decay 0=8020
- quantum efficiencies of fluorescence and phosphorescence, meas., and luminescence standards 4=11203
- quantum efficiency meas., simple method 4=7171
- quantum-mechanical model, radiationless exciton destruction 0=1741
- quantum yield, dependence on wavelength 0=4426
- quantum yield, for energy transfer by resonance 0=13701
- quasi-Fermi statistics 1=3852

Luminescence—contd

quenchers, effect on quantum efficiency of photochemical conversion 2=14745
quenching, effect of reabsorpt. by mols. 3=3032
quenching and electron release from traps, new formula 1=6222
quenching, rel. to intermolecular interaction 2=21914
quenching in solutions 1=12886
radiation transport eqn., rel. to polarization 4=4283
radiationless recombination effect on saturation 0=4460
radiationless transitions, theory 2=21240
radiationless transitions, theory 3=6646
radiative recombination, review 1=3746
radioluminescence, yield rel. to particle energy 3=2609
range of energy propagation of phosphors 2=6593
reabsorption in crystals of finite thickness 2=6558
reaction kinetics parameter, determination 1=6223
recombination, elec. cond. decay 0=16076
relationship with electron-vibrational absorption 1=2453
resonance fluorescence, stationary and non-stationary 0=53
resonance narrowing in inverted populations 4=12329
resonance Raman effect, 73 compounds 0=2175
review, effects of activators, defects and phosphor structure 2=8548
rigid solns., concn. depolariz., active sphere model 3=140
rise, in phosphors with several types of traps 0=10051
scintillation process, energy origins 1=2460
scintillation spectrum, effect of source thickness 2=1628
scintillation theory, 1960 Washington Symposium review 0=13702
scintillations, ultrashort, time distrib. study 1=6967
scintillators, fluoresc. decay time 2=16862
scintillators, kinetics of fast scintillation component 2=13703
scintillators, mean light yield 2=3205
scintillators, 1-12 keV electron response, meas. and energy depend. 1=1185
scintillators, pulse-shape discrimination 1=3078
scintillators, rapid evaluation 2=3076
scintillators, response to electron energy 2=7792
scintillators, response to heavy particles, rel. to δ-rays 2=17997
scintillators, solid, review 2=6633
secondary absorpt. and emission effects 2=14700-1
secondary emission, classification 0=10050
secondary and primary fluorescence of solutions 1=8126-7
semiconductors, phosphorescence, mechanism, recomb. of defect sites 1=3867
semiconductors, recombination radiation 1=7635
sensitized, radiationless energy transition 3=13195
slow phosphors, coincidence cct. 1=4539
solid solutions, binary low conc., theory 2=710
solid solutions, energy transfer and decay law 2=23586
solids, activator concentration depend., formulae, approx. 3=20502
solids, background spectra, origin from surface reactions with atmos. gases 1=10113
solids, irrad., on dissolution in certain liquids 1=1744
solids, kinetics and decay laws 3=15698
solutions, concentration depolarization 0=5031
solutions, decay theory, luminescent centre model 0=6810
solutions, energy transport, generalization to solid solns. 0=6806
solutions, liquid and rigid, fluorescence time const., theory 0=3536
solutions, polarization degree, photoelec. meas. 1=18620
solutions, rel. to absorption spectra, exptal. support for formula 1=18411
solutions, secondary fluorescence effects on emission spectra 0=10672
solutions, with 2 luminescent solutes, conc. depend. 1=1745
solvents, excited state lifetimes 2=15609
sonoluminescence in high polymer soln. cavitation 4=21104
sonoluminescence, liquids, rel. to ultrasonic cavitation 1=15892
sonoluminescence, phase relation with cavitating bubbles 1=12889
sonoluminescence, survey 0=19163
sonoluminescence in ultrasonic cavitation 2=2725

Luminescence—contd

spectra calc. by configurational diagrams 0=4424
spectra, polarized, recording, accessory for Beckman DK spectrophotometer 4=14370
spectral energy distrib. 2000-8000 A 0=6188
spectrofluorimeter, double beam 3=3880
spectrophotofluorometry 0=8795
spectrophotometer, a.g.c. amplifier to correct for light source varns. 3=5605
spectrophotometer (SF-4), with photoelec. attachment, 330-550 mμ 0=10762
stabilization by adjustment of excitation voltage 3=1806
stimulated emission of spheres into optical whispering modes 2=2244
stimulated optical emission, theory 1=11390-1
study by microscope, photoelectric 4=7167
sulphide, luminescence, 150°–200°K 1=20003
sulphide phosphors, 150°–200°K 1=20003
sulphides, reaction-kinetics model 1=19910
systems based on inorganic substs. and organic activators 2=8562
systems with hydrogen bonds 2=14703
tap effect, mechanically excited emission 2=4196
temperature dependence using modified energy-band model 2=8551
temperature quenching, possible role 2=14739
thermal extinction energies calc. 3=25477
thermoluminescence curve automatic recording 0=4467
transfer mechanisms of electronic excitation 1=11076
transition probabs., radiative, in 4f^n configs. 3=25482
two-component mixture, migration and energy transfer 3=13196
two-component systems, G-values and intensity, excitation energy transfer 1=147
two-photon effects in solids 2=4108
two-photon excitation of fluorescence 2=4175
two-photon processes, possible observation 2=4127
ultrataumeter with pulse lamp 4=14371
vapours, resonance radiation ang. distrib. 2=15655
Vavilov's work 3=16479-81, 3
viscosity and temp. effects, rel. to electronic transitions 1=6862
X-ray fluorescence, mutually induced, theory 4=10208
X-ray fluoresence, radiation transfer, rel. to matrix 4=4285
X-ray fluorescence, radiation transfer calc., matrix effect 3=18016
X-ray fluoroscopy 1=10753
yield rel. to decay rate under strong excitation 3=18015
yield dependence on position of luminescence spectrum 1=12887
yield, mean lifetime, and decay law 2=6632

gases

acetaldehyde vapour, fluorescence 1=12929
acetylene, fluorescence 4=25690
air, α-ray scintillations, rel. to electric field 4=6149
air, induced by α-particles from Po^{210}, measurement 1=9420
aliphatic aldehydes and ketones, vapours and crystals 1=6908
alkali metals in H flames 0=1518
alkali metals with organic halides, diffusion flames, chemiluminescence 4=22406
alkali vapours, excitation of resonance fluorescence 1=4469
α excited, weak, meas. 3=21447
1-aminoanthraquinone derivatives, radiationless transitions, potential barrier 4=1284
anthracene derivatives, effect of isopentane 4=6608
anthracene derivative vapours, fluorescence intensity and line shape, rel. to temp. 4=6607
anthracene vapour, benzene-sensitized, at 2652 A 1=6909
anthracene, vapour, conc. and temp. depend. 4=243
anthracene vapour at low pressures 1=181
benzene:biacetyl 2=20844
biactyl vapour, 4358 A, quenching 2=7260
coal gas, luminescence and candoluminescence, surface recombination 0=10052
by electron beams, gas density meas. 1=2724
ethane, fluorescence 4=25690
ethylene, fluorescence 4=25690
fluorescence modulation excited by pulsed light 4=22305
fluorescence, photo-induced 3=9509
fluorescence, sensitized 1=1771

Luminescence—contd

- **liquids and solutions**
  - (Subheading introduced in 1963)
  - acenaphthene in solns., phosphoresc. meas. 4=11206
  - acetone, decay-time, calc. 0=506
  - 1-2-acetylanthracene dissolved in hexane, fluorescence, rel. to second solvent 1=9400
  - acetylanthracenes, in solvents, fluorescence spectra 0=10675
  - acridine dyes, effect of formic and acetic acids 2=15605
  - acridine orange, anti-Stokes phosphorescence 1=6235
  - acridine yellow, in alcohols, polarization, effect of "initial shock" 4=8215
  - acridine yellow, fluorometer meas. of decay period 0=3538
  - acridone solns., no evidence of association 3=141
  - acriflavine, in alcohols, polarization, effect of "initial shock" 4=8215
  - acriflavine solns., intermolecular effects on lifetime 4=29636
  - adipic acid, absorpt. and luminesc. spectra 2=14749
  - alkyl benzenes, internal conversion, upper electronic—first excited singlet states 4=1286
  - 3-aminophthalimide, active and nonactive absorption separation 3=18822
  - aniline 2=6629

Luminescence—contd
liquids and solutions—contd
anthracene—benzene soln., electron excitation, rise—time charac. 1=2765
anthracene, decay of triplet states in fluid media 2=1159
anthracene impurities in 9, 10-dihydroanthracene at 20°K 1=20020
anthracene solns., temp. depend. 4=30452
anthracene, solutions, delayed fluorescence 3=142
anthracene solutions, effect of u.v. and β-irradiation 1=18419
aqueous salt solutions, u.s. excited, asymmetrically broadened emission lines 0=16709
aromatic amines 2=6629
aromatic cpds., aq., solns., due to X-rays 2=7222
aromatic hydrocarbons, decay-time 2=6631
aromatic hydrocarbons dissolved in plastics 3=7213
aromatic hydrocarbons and other cpds., scintillation yield under Sr^{90} radiation 1=1746
aromatic hydrocarbons, polynuclear, with condensed benzene rings, fluorescence 1=3860
aromatic hydrocarbons, in soln., excimer fluoresc. 2=11376
aromatic hydrocarbons, zero-field splitting 1=14091
aromatics in solution, fluorescence decay 1=12888
aromatics in solution, fluorescence decay 1=15889
auramine, anti-Stokes phosphorescence 1=6235
1,2-benzanthracene derivs., "excimer" fluorescence 3=21383
benzene and alkyl derivs., fluorescence quenching by diacetyl in hexane soln., 28°C 4=14174
benzene, ang. distrib. of intensity and polarization 2=20843
benzene, assignment of lowest triplet state 0=17767
benzene, decay-time, calc. 0=506
benzene derivatives and cyclo-paraffins 3=21380
benzene, fluoresc. 2=11483
benzene, lifetime, heavy-atom effect, deuterium effect, temp. effect 0=18141
benzene, scintillator solns., decay times and energy transfer 0=19159
benzene solutions, effect of u.v. and β-irradiation 1=18420
benzenes, trisubstituted, to −180°C 1=14035
benzophone derivatives, paramag. reson. 2=18476
3, 4-benzopyrene soln. in hexane 2=17472
biacetyl, in cyclohexane, benzene sensitization, by triplet—triplet transfer 3=18820
biacetyl, energy-transfer from aromatic hydrocarbons and ketones 3=23890
biacetyl, sensitized fluorescence in soln. 3=16631
benzene, triplet state in sensitization of biacetyl 3=16630
boron—glycerine, fluorescein-activated, concentration depolarization of phsophorescence 0=16100
brassylic acid, absorpt. and luminesc. spectra 2=14749
carbonyl derivatives of biphenyl and naphthalene, intramolec. energy transfer 1=3576
carboxylic acids, substituted, fluorescence spectra 0=18140
castor oil under a.c. voltage 3=16634
cation determ., sensitive reagents 2=15604
and cavitation 4=14118
cavitation, u.s. induced 3=18819
chlorobenzene solutions, effect of u.v. and β-irradiation 1=18420
chlorophyll, chemiluminescence, in photochemical reactions 1=3872
chlorophyll a in 3-methoxy-1-butanol, fluorescence yield, influence of β carotene 4=25782
chlorophyll solns. 2=15601-2
chlorophyll, in solutions, rel. to aggregation state 1=6863
colour quenching, quantit. interpretation 3=21381
complex molecules in soln. tel. to absorpt. spectra 2=17475
concentration depolarization, self-quenching effects 2=55
coronene in n-heptane, linewidth temp. var. 4=25698
coronene, in perhydrocoronene, u.v. excitation 1=1178
crystalline solns., spectra fine structure 1=17917
decay times, true and measured 3=16633
delayed fluoresc., sensitized P-type, mechanisms 4=191
diazenes 2=6185

Luminescence—contd
liquids and solutions—contd
dibenzyl, effect of second impurity 2=16865
9,10-dibromoanthracene, first order triplet decay, rate consts. 3=3811
9, 10-dibromanthracene in various solns., fluoresc. displacement 2=7221
dichlorotoluenes. to −180°C 1=14035
diethylaniline 2=6629
dihalogeno acridines, rel. to halogen atoms 2=13348
dihalogeno fluoresceins, rel. to halogen atoms 2=13348
9, 10-dihydroacridine 2=6629
6, 7-dihydroxynaphthalene-2-sulphonic acid metal chelates, Stokes shift rel. to stability const. 4=5194
dimethylaniline 2=6629
2, 6-dimethylnaphthalene solution 4=5188
diphenyl in solns., phosphoresc. meas. 4=11206
diphenylamine 2=6629
9, 10-diphenylanthracene solns., temp. depend. 4=30452
1, 4-diphenylbutadiene-1, 3, solns., temp. depend. 4=30452
2,5 - diphenyloxazole 1=8131
diphenyloxazole soln. in cyclohexane, energy transfer and O_2 quenching 2=7223
diphenyloxazole, in xylene soln., energy transfer 0=19161
distyrylbenzene derivatives, fluorescence spectra 4=18209
dye solns., quenching and absorpt. spectra osc. strengths 4=11200
dye solns., and spectrum, absorpt., diff. 4=14171
dye solution, primary and secondary fluorescence 1=8126-7
dye solutions, quenching by tartaric acid 1=15891
dyes, appl. in biology 3=9469
dyes dissolved in polyvinyl alcohols 3=7213
dyes, phos. to fluores. yield ratio versus fluorescein or acid conc. 0=3537
dyes, polarization spectrum, fine structure 4=27185
dyes in solution, triplet—singlet emission 3=11800
energy-transfer studies by spectrophotofluorometric method 3=23890
energy transport phenomena in solns. 3=3806
eosin, photoluminescence quenching 1=12886
eosin, in polymethyl methacrylate, polarization 3=15713
eosin, solns., in mono- and polymethyl methacrylate 2=9281
eosin, solution in collodion and glucose, fluoresence yield 1=1179
eosin, spectrum, influence of solvent mixture of MAM or ethanol 3=21378
eosin yellow, in glycerin and polymethyl methacrylate, reflection symm. 2=19566
esculin, anti-Stokes phosphorescence 1=6235
ethylene glycol, sonaluminescence 0=2178
excimer, due to 2-stage charge transfer 4=21141
fluorene 2=6629
fluoresc. dielec., high elec. field effect 4=24222
fluoresc. quantum efficiencies of solutions 1=15890
fluorescein, active and nonactive absorption separation 3=18822
fluorescein, adsorbed on Al_2O_3 films 1=20022
fluorescein on $Al_2O_3.xH_2O$, rel. to surface —OH groups 2=4183
fluorescein anions in solns. of varying viscosity, lifetimes 2=7225
fluorescein aq. soln., rel. to anti-Stokes excitation 2=22941
fluorescein, aq. soln., various ionic forms 3=3809
fluorescein—boric acid, conc. depend. 1=2762
fluorescein, detection 2=2457
fluorescein dyes, luminesc. yields 2=15608
fluorescein, in glycerin, fluorescence, concentration-depolarization 0=4423
fluorescein in glycerine, kinetics of concentration depolarization 1=2761
fluorescein in glycerol, concentration depolarization 1=15888
fluorescein, in glycerol, polarization of fluorescence 0=14661
fluorescein, ionic form 2=15606
fluorescein, ionic forms, neutral salt effects 3=7212
fluorescein in methyl methacrylate 1=9398
fluorescein in methyl polymethacrylate 1=148
fluorescein, photoluminescence quenching 1=12886
fluorescein in PMAM 2=12631

Luminescence—contd

- **liquids and solutions**—contd

Cu, resonance, ion beam prod. ang. var., mechanism 4=13071
Cu, u.v. 2000-3400 A, on H ion impact 4=20487
CuBr, Br surface centres, effect of A and H atmos. 1=2454
CuBr, edge luminescence, excitation curves, 77°K 4=1768
CuBr, narrow bands at 20° and 77° K 3=3040
CuCl crystal, fluorescence, rel. to exciton 4=26240
CuCl, edge luminescence, excitation curves, 77°K 4=1768
CuF_2:U, room temp. and —150°C 0=10066
CuI, edge luminescence, excitation curves, 77°K 4=1768
CuI, photoluminescence, at low temps. 0=21000
Cu_2O, rel. to adsorption of air and water 4=1770
Cu_2O, carrier recomb. and impurity-centre structure 2=10615
Cu_2O, effect of applied elec. field 1=14629
Cu_2O, effect of elec. field at surface 2=4172, 8572, 18859, 23592
Cu_2O, effect of O vacancies 3=18029
Cu_2O, elec. field effects 3=22942
Cu_2O, excitation mechanism in impurity absorpt. region 4=10212
Cu_2O, excitation spectrum rel. to absorpt. spectrum 2=14718
Cu_2O, i.r. emission, -150° to + 100°C 4=1728
Cu_2O, i.r., quenching by water and solutions 3=18028
Cu_2O, luminescence, effect of elec. field 1=14629
Cu_2O, quantum emission wavelength independ. 2=6601
Cu_2O, short-wavelength bands, relaxation time 3=3041
Cu_2O, spectral dependence, at 77°K 1=20005
Cu_2O, under various thermal treatments 4=7066
Cu_2O, yellow exciton spectra, rel. to neutron-irradiation 3=17998
Dy in thoria 2=14733
$DyCl_3$ 1=19974
$DyCl_3$, i.r. fluorescence 2=6577
Er in thoria 2=14733
$ErCl_3$ 1=12493
$ErCl_3$ 2=14678
Er^{2+}, in MeF$_2$(Me = Ca, Sr, Ba) 4=13038
Er^{3+} in CaF$_2$ matrix, fluorescence yields and decay times 4=20454

Luminescence—contd
solids, inorganic—contd
Er^{3+} in LaF$_3$ 4=28684
Er^{3+} in Y$_2$O$_3$ single crystals, fluorescence spectrum 4=22856
Eu and Tb salts, lifetimes 2=8580
Eu in $Ca_{1-2x}Na_xEu_xWO_4$ 0=16083
Eu in thoria 2=14733
Eu^{2+} in alkali halide cyrstals, absorpt. and fluorescence spectra 4=15611
Eu^{3+} and Tb^{3+} in scheelites, intensity dependences 2=21263
Eu^{3+}, conc. quenching 2=6609
Eu^{3+}, enhancement by Tb^{3+} 2=6610
Eu^{3+} in Eu dibenzoylmethane 3=3061
Eu^{3+} in LaCl$_3$ 3=15683
Eu^{3+}, in silicate glasses, and Eu—O interaction 4=10174
Eu^{3+} in tungstates, effect of ion size 2=4173
Eu^{3+}, in tungstates and molybdates 3=10987
Eu Cl$_3$, solvated with H$_2$O and D$_2$O, decay times 4=30698
GaAs diodes, degradation 4=1771
GaAs diodes, 20°-77°K, band-filling model 3=20514
GaAs, doped, spectra, 77°K 3=8617
GaAs, electron beam prod., 100°K 4=26245
GaAs, by electron bombardment 4=4298
GaAs grown in oxygen 4=4296
GaAs, homog.-doped bulk samples 4=4297
GaAs, n and p-type, fluorescence meas. 4=10175
GaAs, p—n junction, radiative recombination through impurity levels 4=4299
GaAs p—n junctions, recombination radiation 4=28643
GaN, doped 1=3861
GaN, prep. and cathodeluminescence 2=8589
GaN, pure and doped 0=1751
β—Ga$_2$O$_3$, temperature and concentration dependence 3=15707
Ga$_2$O$_3$: Cr, relaxation times, various Cr$_2$O$_3$ concs., reabsorpt. 3=20509
GaP, and crystal excitons, bound, 77, 4°K 4=15462
GaP, decay time fine structure rel. to lattice defects 4=4300
GaP, edge bands, long-wave excitation 4=13074
GaP, effect of high press., rel. to band structure 4=20243
GaP, electroluminescence, 20°-100°C, and effect of Zn impurities 1=10122
GaP, low temps., regular lines due to excitons 4=13075
GaP, 1.6°K, pair spectra 3=15708
GaP, p—n junction, rel. to temp. and excitation density 1=17775
GaP, p—n junctions, forward-biased 2=23436
GaP, pair spectra and "edge" emission 4=10215
GaP, photoluminescence, complex fine-struct. at 4.2°K 2=21265
GaP, recombination emission 0=20916
GaP, spectrum, 4·2°K 3=8618
GaP:Zn, p—n and photoluminescence 1=14631
GaS, meas. rel. to carrier trapping states 4=7185
Ga$_2$S$_3$, meas. rel. to carrier trapping states 4=7185
Ga$_2$S$_3$—Ga$_2$Se$_3$, self-activ., rel. to chem. structure 4=7178
Ga$_2$S$_3$—In$_2$S$_3$, self-activ., rel. to chem. structure 4=7178
GaSe, meas. rel. to carrier trapping states 4=7185
Gd salts, rel. to mol. states 2=10616
GdCl$_3$ 3=10988
GdCl$_3$, Gd^{+++} intensity and duration 0=10674
GdCl$_3$, photochemical damping 2=10616
GdCl$_3$.6H[D]$_2$O, fluorescent transitions, rel. to vibration of neighbouring molec. group 4=1773
GdCl$_3$. 6H$_2$O, resonance line self-reversal in thick crystals 4=26241
Gd$_2$O$_3$:Nd^{3+}, fluorescence spectra at room temp. and 77°K 4=17602
Gd$_2$(SO$_4$)$_3$ 3=10988
Gd$_2$(SO$_4$)$_3$, Gd^{+++} intensity and duration 0=10673-4
Ge diffused p—n junction 1=1093
Ge, by electron bombardment 4=4298
GeO$_2$, fluorescence 1=9005
GeO$_2$:Al, thermoluminescence 0=1769
HgI$_2$ 2=18836
HgI$_2$, correlation between luminescent and absorption edges 1=17906
HgI$_2$, edge bands, long-wave excitation 4=13074
HgI$_2$, excitation spectrum, rel. to absorption 3=6669
HgI$_2$, spectrum, rel. to exciton excitation 2=23587

Magnox AL80, creep props. 3=8771
Magnox AL 80, effect of Be on exaggerated grain growth 3=25760
Magnox AL 80 and ZR 80, fatigue behaviour at high temp. 3=25762
Magnox ZR 55, mech. props., effect of H$_2$ pick-up 3=25761
oxides, powders, diffuse reflection 0=12469
peridot radiation induced cavitation and exfoliation 4=10008
solid solutions, lattice spacings 0=21195
spinel, elec. cond. at 35 kb 2=14511
spinels containing Mn^{3+} ions, crystal distortion 1=20556
spinels, ferrimag. preferred direction theory 4=13225
steatite, bulk impurities and surface contamination by mass spectrometry 1=11640
talc monocrystals, dislocations 1=3674
Tutton's salts, water of cryst., proton–proton vector orientations 4=10450
yoderite, crystals struct. 2=17024
CeMg nitrate, Ce^{3+} spin—lattice relaxation 1=6423
Mg acetate, aq. dissociation on u.s. absorpt. 2=13334
Mg alloys, dilute, Matthiessen rule deviations, rel. to phonon spectrum 4=28531
Mg alloys, fatigue behaviour, temp. depend. 4=1954
Mg, alloys of 0.1 at.% Mn, thermoelectricity below 100°K meas. 2=6510
Mg alloys, plastic, yield points and heat treatment 4=15709
Mg alloy, polycrystalline, {1012} twin bands, formation of, and recrystallization within 4=23307
Mg alloys with Mn, Cd or Al, low-temp. magnetoresist. 4=20333
Mg aluminate spinel, Mn^{2+}- and Fe^{3+}- activated, cathodoluminescence 4=17603
Mg, dilute, elec. res. at low temp. 0=6083
Mg, double nitrates of, with transition metals, mag. susceptibility meas. 2=16893
Mg, elastic constants and electron energy structure 1=20296
Mg ferrite-aluminates, saturation mag. rel. to parameters 4=7287
Mg ferrite, atomic displacement due to thermal agitation and local distortions 2=3913
Mg ferrite–Fe$_3$O$_4$, mag. cryst. anisotropy 2=18920
Mg ferrite, growth orientation 1=6494
Mg ferrite-magnetite, mag. cryst. anisotropy 2=12789
Mg ferrite–magnetite system, mag. anisotropy 1=20141
Mg ferrite, nonstoichiometric, cation distrib., erratum 4=17810
Mg ferrite, nonstoichiometric, cation distribution 3=25720
Mg fluorogermanate and fluoroarsenate, temp. depend. of fluorescence 1=6224
Mg fluorogermanate, luminescence, absorption and diffuse reflection spectra 1=9006
Mg fluorogermanate, Mn^{4+} centre, emission and absorption spectra 0=16087
Mg fluorogermanate, photocoloration and photoconductivity rel. to u.v. irrad. 3=25837
Mg fluorogermanate, photoconductivity, effect of u.v. irradiation 1=7675
Mg fluorogermanate, photoconductivity, rel. to u.v. irrad. 3=2978
Mg–Gp IV elements, preparation 1=14429
Mg halides, vapour, mass spectr. study 3=2673
Mg metaphosphate glasses, Cu and Mn activated, u.v. luminesc. 2=18862
Mg–0.6% wt Zr alloy, microstructure 2=4515
Mg phthalocyanine : VO$_2$(NO$_3$)$_2$.6H$_2$O, luminescence, and H bonding 4=22935
Mg platinocyanide, anomalous dispersion 0=6168
Mg platinocyanide crystals, fluorescence 1=10115
Mg spinel, spectral and relaxation props., rel. to Cr activation 3=20512
Mg titanate, elec. cond., effect of reactor irrad. 2=14507, 18646

Magnesium compounds—contd
- Mg titanates, dielectric losses, under irradiation 2=4096
- Mg titanates, dielectric properties rel. to neutron irradiation 1=12475
- Mg–Al, alloy, creep-deform. mechanisms 2=18996
- Mg–32 wt.% Al eutectic, lamellar tilt boundary 4=15482
- Mg–Al alloys, characteristic electron-energy losses 3=6508
- MgAl ferrites, prep. and props. of monocrystals 1=20440
- Mg-Al, soft X-ray emission spectra 1=1174
- Mg–Al(0.8%), slip at grain boundaries 4=20666
- Mg–Al(32 wt. %), struct., rod like 4=26697
- MgAl ferrites, prep. and props. of monocrystals 2=4381
- Mg_2Al_3, crystal structure 2=23850
- Mg_3Al_2, hot-hardness 2=2337
- Mg_5Al_8, hot-hardness 2=2337
- Mg-Al-Be, intergrain creep cavities 2=19098
- $Mg(Al, Fe)_2O_4$, on ferromag. reson. 4=30728
- $MgAl_2O_3$, thermal cond., meas. and theory 2=10342
- $MgAl_2O_4$, cation distrib., neutron diffn. analysis 4=29121
- $MgAl_2O_4$, e.p.r. of Mn^{2+}, Fe^{3+} 3=8711
- $MgAl_2O_4$, elec. field gradient calc. 2=10297
- $MgAl_2O_4$, electron microscope study of surface 1=10286
- $MgAl_2O_4$ spinel, containing Fe^{3+} ions, paramag. reson. 2=769
- $MgAl_2O_4$ spinel, Mn^{2+} e.p.r. 3=8712
- $MgAl_2O_4$, (spinel) radiation induced cavitation and exfoliation 4=10008
- $MgAl_2O_4$, Al^{27} nuclear quadrupole interaction, Mg^{2+} and Al^{3+} distrib. 1=1286
- $MgAl_2O_4$, Cr^{3+} e.s.r. 0=3131
- $MgAl_2O_4$, Cr^{3+} ion e.s.r. 3=3171
- $MgAl_2O_4$, Cr^{3+}, zero-fld splitting rel. to magnetic anisotropy 3=1012
- $MgAl_2O_4$, Ni-doped, optical absorption 1=17887
- $MgAl_2O_4$ (spinel), dislocations, stacking faults and twins 1=17544
- $Mg_3Al_2 (SiO_4)_3$, crystal lattice, energy calc., var. structures 4=3955
- Mg–Au films, vacuum deposition, orientation 3=20924
- Mg-Au, spectra, vibrational structure 0=5925
- $Mg_3B_7O_{13}Cl$ dielectric props., and phase transform 4=4201
- $Mg_2B_6O_{11}.15H_2O$ (inderite), n.m.r. spectrum of B^{11} 0=13889
- $Mg[B_3O_3(OH)_5].5H_2O$, crystal structure 2=12917, 19082
- $(Mg, Ba)_2P_2O_7$:Sn, prep. and luminesc. 2=8577
- $(Mg_{1.5}Ba_{0.5-x}Sr_x)P_2O_7$:Sn, prep. and luminesc. 2=8577
- Mg-Be alloys, spectral anal., binary and multi-component systems 2=19175
- $MgBe_{13}$, crystal structure 2=10877
- Mg-Bi-Sn, thermal and metallographic study 2=21539
- $MgBr_2$, e.s.r. of Mn^{2+} 1=14802
- Mg–Cd alloys, long-range order, Cd conc. and temp. depend. 3=23480
- Mg–Cd alloys, ordered, X-ray structural study 3=23579
- Mg–Cd, creep props. 3=8772
- Mg–Cd, Hall coeff. rel. to Cd concentration 1=12417
- Mg–Cd, hardness, composition and temp. depend. 4=13424

Magnesium compounds—contd
MgH and MgD, Te values for band spectra 2=18456
MgH, u.v. spectrum 1=11101
MgH_2, mean ampl. of vibr., calc. 4=17291
$Mg(H_2O)_6(BrO_3)_2$, elastic and thermoelastic props. 3=18161
$MgHPO_3.6H_2O$, X-irradiated, hyperfine interactions 2=10701
MgI excitation in chromosphere 3=11543
MgI_2, internal electric-field gradient, calc. 1=11143
Mg–In h.c.p. alloy, local order study by X-ray scattering 3=25744
MgLi antimonate, Mn-activated, u.v. luminescence 0=10062
Mg–Li ultrasonic attenuation, low-temp. rel. to Bordoni peaks 3=22650
Mg–Li, Mg–Li–Na, Mg–Li–K, antimonates, Mn activated 4=1774
$Mg_5Li_6Sb_2O_{13}$, phosphors prep. and props. 2=4174
Mg/MgO, sintered, as nuclear material 3=15268-9
Mg—Mn alloys dilute, mag. props., with low-temp. resistance minimum 3=4996
Mg—Mn, chill-cast comp. 4=20694
Mg–Mn cores, square-loop, flux reversal 3=1084
Mg–Mn, dilute, elec. resist., temp. depend. 0=17999
Mg–Mn, low-temp. mag. props. 2=14763
Mg-Mn single crystals, plastic deformation and work hardening 3=25624
Mg–Mn, sp. ht. anomalies rel. to resistance-min. 1=19713
Mg—Mn ferrite, demagnetizing energy 3=9899
MgMn ferrite, domain structure 4=13238
Mg–Mn ferrite, ferrimag. reson. width 2=18936
Mg—Mn ferrite, ferromag. reson. line width 4=26360
MgMn ferrites, hysteresis, effect of mag. after-effects 2=6674
MgMn ferrite, hysteresis loop rectangularity 1=20133
MgMn ferrite, hysteresis loops, rectangularity 3=13272
Mg—Mn ferrites, improvement by Ti^{4+}—Ni^{2+} ion group substit. 4=20555
Mg–Mn ferrites, influence of firing 2=12792
MgMn ferrite, magnetic props. 1=12537, 14734
MgMn ferrite memory cores, high-speed switching 3=15872
MgMn ferrites, new materials for memory cores 3=15875
Mg—Mn ferrites, permeability, var. with freq. and field strength 4=10290
Mg–Mn ferrite, powder-figure study of domains 1=17977
MgMn ferrites, prep. and props. of monocrystals 1=20441
MgMn ferrites, prep. and props. of monocrystals 2=4382
MgMn ferrites with rectangular hysteresis loops, domain structure 2=23676
MgMn ferrites, rotational hysteresis losses 3=18101
MgMn ferrites, squareness of hysteresis loops 0=13823
MgMn ferrite, wall effect in ferrimag. resonance 1=1254
MgMn spinels, ferromag. reson. line widths, temp. and freq. depend 3=23210
MgMnAl ferrite, use in linear-accelerator isolator 0=12656
$MgMn_2O_4$, elec. props. and cation migr. meas. 4=26052
$MgMn_2O_4$, magnetic properties 1=20134
$MgMn_2O_4$, "normal-random" transform. 2=14923
$Mg_xMn_{3-x}O_4$, exchange anisotropy 1=7768
$Mg_xMn_{3-x}O_4$, prep., elec. cond., tetragonal distortion 4=15555
Mg—N, ultrasonic attenuation, low-temp. rel. to Bordoni peaks 3=22650
$Mg(NO_3)_2.6H_2O$, crystal structure 2=4428
Mg–Nd, crystal structure 2=21529
Mg—Nd, dilute, elec. cond. meas. down to 1°K 4=10029
Mg–Nd alloys, effect of Nd on elec. resistivity 3=829
Mg–Nd alloys, elec. resist. anomaly 2=14489
Mg—Nd double nitrate, reflection spectrum 3=23063
Mg–Ni alloy; Mg diffusion at 1119°K 2=14464
Mg—Ni, thermodynamics of formation of compounds 1=1437
MgNi ferrites, reson. of domain walls 2=14799, 18918
$MgNi_2$, mag. susceptibility, heat capacity and third-law entropy 0=16126
$MgNi_2$, thermodynamics of formation 1=1437
Mg_2Ni, thermodynamics of formation 1=1437
$MgNiF_3$, mag. dipole transitions, from pleochroism 3=19993
MgO, absorption edge, relationship with lattice energy 1=3836
MgO, acoustic amplification, parametric, 8.5 Gc/s 4=15420

Magnesium compounds—contd
MgO, acoustic e.s.r. of Fe^{3+} and Mn^{2+} 4=1867
MgO, acoustic interaction, non-linear, 9 Gc/s, on <100> axis 3=20096
MgO, anomalous electron absorption, from micrographs 1=20715
MgO, antiferromag. exchange interations between Mn^{2+} ions in 0=6274
MgO, "ball and chain" precipitates on grown-in dislocations, electron microscope study 1=8911
MgO, bicrystals, crack nucleation under compression 2=6754
MgO bi-crystals, fracture, dislocation mechanism 1=6474
MgO, bicrystals, fracture strength 4=13423
MgO, Bordoni peaks 3=23294
MgO, Burgers vector, electron micr. meas. 3=803
MgO with Cr, energy levels 2=63814
MgO, Cr impurity, sharp lines of optical spectrum 2=4141
MgO, Cr^{3+}, Mn^{2+}, Fe^{3+}, Fe^{2+}, Ni^{2+}, ultrasonic spin res. meas. 3=23240
MgO, catalysis of $H_2 + \tilde{D}_2 \rightleftharpoons 2HD$, u.v. irrad. induced V_1 centres, e.s.r. study 4=30901
MgO cathode, cold, polycrystalline layers, reviews 4=16518
MgO, cathodoluminescence, vacuum u.v. 3=13178
MgO, charged dislocations 1=14275
MgO chemisorption of O_2 on n, γ irrad., e.s.r. obs. 4=2360
MgO, climb of dislocations 2=3919
MgO, coating on Cu–Al–Mg alloy, effect on sec. electron emission 0=15060
MgO, cold-cathode characteristics 0=19714
MgO cold cathode, effect of gases 2=22245
MgO, colour centre formation, role of impurities 2=12464
MgO, compression textures at 75 tons/in ^{2} 1=20700
MgO. crack formation 1=3999
MgO, crack formation, due to dislocation piling up 0=17932

MgO, water vapour effect on sintering 4=23546
MgO, X-ray characteristic temp. and thermal expansion 4=28372
MgO, X-ray line broadening evaluations 4=10584
MgO, Young's modulus, exponential temp. depend., 77-850°K 1=10204
$Mg^{24}O^{16}$ and $Mg^{26}O^{16}$ mols., green bands meas. 4=20053
$MgO.Al_2O_3$ crystals, transition metal impurity ion energy spectrum calc. 3=20130
$MgO.\ Al_2O_3$ (spinel), prep. of monocrystals and their optical props. 0=16033
$MgO.\ 3.5\ Al_2O_3$, elasticity 0=13901
MgO–BaO glass, elec. resist. rel. to comp. 2=21110
MgO–CaO glass, elec. resist. rel. to comp. 2=21110
MgO:Co, optical absorption 2=4142
MgO, Co^{2+} interstitial ion magnetic props. 1=17944
MgO:Cr, fluorescence of exchange–coupled Cr^{3+} pairs 0=660
MgO:Cr, fluorescence line at 14319cm^{-1}, strain effects 1=9007
MgO: Cr, spin–phonon relaxation, acoustic saturation 0=13732
MgO:Cr^{3+}, fluorescence Zeeman effect, expt. and theory 1=1180
MgO, Cr^{3+} spin–lattice relaxation, 1.3-50°K 1=5073
MgO: Cr^{3+} and: V^{2+}, $^2E \rightarrow {}^4A_2$ fluoresc. lines 4=10216
$MgO\text{-}GeO_2\text{-}SiO_2\text{-}TiO_2$ system, subsolidus equilibria and luminescence data 4=1775
$MgO–MgCr_2O_4$ system, phase equilibria 4=20713

Magnesium compounds—contd
$MgO–MnO_t–Fe_2O_3$ ferrite, magnetic props. rel. to Sc_2O_3 addition 3=20613
$Mg(OH)_2$, adsorption of water, dielectric study 0=14945
$Mg(OH)_2$, decomposition in electron microscope 0=742
$Mg(OH)_2$, lattice energy levels by neutron scatt. 3=17643
$Mg(OH)_2$, lattice vibs. 4=3973
$Mg(OH)_2$, Raman and i.r. spectra 1=1171
$Mg(OH)_2$ reststrahlen spectra and optical consts. 4=22842
MgOH, u.v. bands 2=8105
$Mg_nP_2O_n$, thermodyanmic props. 4=9860
Mg_2Pb microhardness and latent heat of fusion 1=6484
Mg_2 Pb, semiconducting props., p-type 3=10834
$Mg_nP_nO_n$, thermodynamic props. 4=9860
$Mg^{2+}Rh_2O_4$, spinel, superexchange 4=13274
MgS, X-ray characteristic temp. and thermal expansion 4=28372
$MgSO_4$, aq., Soret effect at 25°C 2=7200
$MgSO_4$, aqueous soln., sound absorp., relax. theory 3=23879
$MgSO_4$, nucleation rel. to mechanical agitation 2=21489
$MgSO_4$, p.m.r., solutions, dissoc. mechanism 4=209
$MgSO_4$., solution in methanol and water u.s. absorpt. 2=13337
$MgSO_4$, surface structure, effect of S^{35} radioactivity 1=20656
$MgSO_4.H_2O$, crystal structure 3=18327
$MgSO_3.3H_2O$, crystal parameters and symmetry group 4=13595
$MgSO_4.4H_2O$, crystal structure 2=21524
$MgSO_4.4H_2O$, crystal structure 4=23455
$MgSO_4.6H_2O$, crystal structure, atomic 4=13596
$MgSO_4$, $7H_2[D_2]O$, i.r. absorption spectra, 350-4000 cm^{-1} 4=22880
$MgSO_4.7H_2O$, piezoelec., elastic and dielec. props., temp. depend. 0=11749
$MgSO_4.7H_2O$, SO_4^{--} i.r. absorpt. bands 2=4155
$MgSO_4.7H_2O$, u.s. velocities, elastic consts., and structure 3=20690
Mg_3Sb_2, optical props., photoelectron emission 248-800 mμ 2=2213
Mg_3Sb_2 thin films, elec. and optical props. 2=6460
Mg_2Si. band structure calc. using pseudopotentials 4=28411
Mg_2Si, i.r. reflection spectrum 3=15653
Mg_2Si microhardness and latent heat of fusion 1=6484
Mg_2Si, n-type, i.r. absorpt. spectra 2=4152
Mg_2Si, n- and p-type, Seebeck coeffs., 7° to 1000°K 2=23404
Mg_2Si, new dense phases 4=30804
Mg_2Si, refractive index, 7-10μ 3=8576
Mg_2Si, Seebeck effect, phonon processes 2=16761
Mg_2Si, thermal cond. rel. to temp. 3=12931
$Mg_2Si–Mg_2Sn$ solid solns., thermoelec. props. 2=8453, 14593
Mg_2SiO_4 (forsterite) whiskers, ultimate strength 2=6748
Mg_2Sn, band structure eval. 3=2752
Mg_2Sn, elec. props. 3=2922
Mg_2Sn, i. r. absorption in n and p-type 4=10179
Mg_2Sn, i.r. reflection spectrum 3=15653
Mg_2Sn microhardness and latent heat of fusion 1=6484
Mg_2Sn, photoelec. emission characts. rel. to adsorpt. of BaO 2=1483
Mg_2Sn, refractive index, 7-10μ 3=8576
Mg_2Sn, thermal cond., 300°K 1=16133
Mg_2 Sn, 23·8 MeV Mössbauer absorption line, with natural width 77° to 290°K 4=12592
$Mg_2SnO_4–Mn_2SnO_4$ spinel system, mag. study 2=4234
$Mg_2Sn_xPb_{1-x}$, energy-gap variation rel. to composition 3=869
$Mg_2(Sn)_x(Pb)_{1-x}$, surface states in semimetal region 4=28411
$MgTiF_6.H_2O$, Mn^{2+} e.s.r. 2=21369
$MgTiO_3$, dielec. props., microwave freqs. 3=13112
$MgTiO_3$ dielectric losses, under irrad. 2=4096
$MgTiO_3$ dielectric losses, under irradiation 1=19926
$MgTiO_3$, e.s.r. of Cr^{3+} at 24 and 35 kMc/s 3=15938
$MgUO_3–MgUO_4$ system, phase equilibrium, heats of reaction and soln. 4=20714
$MgV_2O_4–Mg_2VO_4$, valency semicond., temp. depend. 0=4366
$Mg[V_2]O_4$, spinel, Néel temp. 4=13266
MgV_2O_4 spinel, neutron diffraction study 4=13597
$MgWO_4$, e.s.r. of Cr^{3+} 3=15939

Magnesium compounds—contd
  $MgWO_4$, growth of single crystals for e.s.r. studies 0=6265
  $MgWO_4$, luminescence decay rel. to traps 2=6613
  $MgWO_4$, luminescence decay time, ion excitation 0=1756
  $MgWO_4$, luminescence, field stimulated, absence below 2×10^5 V/cm 2=12629
  Mg-Zn precipitation phenomena 2=21554
  Mg—Zn(6%), precipitation, X-ray exam. 4=17765
  $MgZn_2$, de Haas—van Alphen effect and Fermi surface 4=1799
  MgZn ferrite, neutron diffraction study 3=23184
  Mg-Zn ferrites for communications techniques 2=16922
  Mg-Zr alloy, creep strength rel. to heat treatment 4=28965
  Mg—Zr alloy, creep at 400°-450°C in CO_2 4=30782
  Mg—1/2 wt.% Zr alloy, grain boundary denuded zones 3=16116
  Mg-Zr alloy ZA, creep at 400° and 450°C in CO_2 3=25629
  Mg—Zr alloys, directional diffusion 4=12796
  Mg—Zr, chill-cast, comp. 4=20694
  Mg—Zr, heat treatment in H_2 creep ductility improvement 3=25763
  Mg-Zr homogenized alloy, Zr hydride formation 4=30872
  Mg-Zr, intergrain creep cavities 2=19098
  Mg-Zr system, diffusion and constitutional obs. 4=23243
  Mg—Zr(0.5 wt.%), cracking, grain boundary, in traces of moisture, in reactors 4=20667
  SmMg nitrate, absorption spectrum and Zeeman effect 1=2443
Magnetic cooling
  (Heading introduced in 1962)
  antiferromagnetis, by adiabatic magnetization 3=15909
  by cerium magnesium nitrate for Cu 4=5484
  Ettingshausen cooler, thermodynamic analysis 2=11529
  low-temperature physics conference 4=11428
  magnetothermal devices, bound to figure of merit 3=358
  magnetothermodynamic props. of crystals, meas. apparatus 4=8886
  n.m.r. in demagnetized state 3=6760
  review, below 1°K 4=11429
  spin system, by adiabatic removal of force 4=18502
  $Ag_3La_{0.8}Er_{0.2}$, by adiabatic demagnetization 4=16305
  Bi Nernst—Ettingshausen refrigerator crystals 4=14472
  Co—Tutton salts, at 0.07°K, by anisotropic hyperfine structure coupling 4=16306
  $Cu_4La_{0.8}Er_{0.2}$ and $Cu_4La_{0.6}Er_{0.4}$, by adiabatic demagnetization 4=16305
  $MnBr_2 \cdot 4H_2O$, by adiabatic magnetization 3=15907
  $NH_4Fe(SO_4)_2$ in liq. He, without thermal insulation 4=5485
Magnetic devices
  (Heading introduced in 1961)
  amplifier, Ni-Fe core material, grain size effects 2=12706
  amplifier, review of solid-state devices 2=16586
  C-band circulator-switch, using Ni ferrite with Al, Ga 2=14805
  circuits, alternating, complex quantities 3=9909
  computer devices, all-magnetic logic systems 1=5530
  computer elements 1=6690
  computer memories, film, future developments 4=11750
  computer memories, review 3=14729
  computer memory, film, creep and boundary displacemer switching 4=11752
  computer memory, film, with dielectric layers, optical readout 4=11757
  computer memory, film, evaporated wiring 4=11751
  computer memory film, interaction between elements 4=11753
  computer memory films, optimum mag. parameters 4=11754
  computer memory, film, uniaxial pair with biaxial props. 4=11756
  computer shift register, film, domain wall motion, nucleation 4=11755
  conference, Philadelphia (1963) 3=14465
  current monitor for particle beams 3=446
  de Haas—van Alphen effect, sample orienting device, for low-temp. and high mag. fields 3=19413
  Deltamax core period meter for nuclear reactor 4=15259
  demagnetiser, d.c., using SCR's 4=14855

Magnetic devices—contd
  digital tape systems, recording and reproduction 1=7123
  domain-wall storage and logic 2=13636
  earth field variation compensation, using balances 4=8893
  electromechanical transducers for u.s. delay lines 4=14860
  in electron microscope, specimen magnetization 2=20102
  ellipsoids of uniform magnetization, external fields 1=5529
  Ettingshausen cooler, thermodynamic analysis 2=11529
  Fabry—Perot interferometer fine adjustment 4=8448
  ferrimagnetic high power coaxial duplexer limiter 2=13682
  ferrite amplifier, magnetodynamic mode 2=13680
  ferrites for communications techniques 2=12788
  ferrite core logic, impulse selection 1=7122
  ferrite core memories in spark chambers 3=10009
  ferrite cores, flux distributions under various partial switching modes 1=7121
  ferrite cores, flux reversal in transverse field 2=13637
  ferrite cores, partially switched, threshold props. 2=13629
  ferrite frequency doubler, conversion efficiency 2=11788
  ferrites memory cores, history, effect on switching 3=15869
  ferrite, memory cores, multipath, flux switching 3=15870
  ferrite memory cores, nondestructive readout 3=15871
  ferrites, for microwaves 3=24475
  ferrite power limiters, frequency range 3=15882
  ferrites phase shifters, slow-wave u.h.f. 2=13679
  ferromag. heat engine, efficiency, materials, temp. var., calc. 4=27613
  ferromagnetic amplifier, parallel-pumped 3=490
  ferromagnetic amplifiers, freq. doublers and modulators, review 2=14814
  field discriminator, for stabilization and fine control 2=1615
  field inhomogeneities reduction in n.m.r. expts. 3=7727
  film computer devices using passive loading 1=7120
  film elements, ferromagnetic, switching time 2=18908
  film memories, drive current margins 3=14730
  film-plated computer memory wire elements, switching characts. display 4=27614
  films, magnetostatic interactions 2=13634
  films, review of applications 2=20088
  for force meas. 4=7361
  frequency doubling from ferrites, 100W level 2=13681
  heat pumps, thermomagnetic, theory 4=7089
  high field prod., MG, explosion driven flux compression system 4=11744
  inflector and deflector, mag. field fronts, pulse-forming circuits 4=5746
  inflector and deflector, mag. field pulses with min. fronts 4=5745
  lens, long, focusing properties, Monte Carlo method 3=19342
  logic elements using strained Permalloy wire 2=13639
  magnetic current regulator, v.h. stability, using power transistors 2=11576
  magnetic-film parametron, stable-oscillation conditions 1=4696
  magnetic recording, review 2=15988
  magnetization reversal by coherent rotation, soln. of eqns. 2=13638
  magnetometer, astatically compensated 4=21614
  magnetometer based on Hall effect 2=13651
  magnetometer based on n.m.r. 2=7703
  magnetometer, flux-gate new type 2=13643
  magnetometer for 0.1–10 c/s oscillations of earth's field 4=13858
  magnetometer, proton, curious behaviour 4=30013
  magnetometer, proton, remote 2=5434
  magnetometer, Rb, self-oscillating, for earth's field 4=26867
  magnetometer, Rb-vapour 2=15983
  magnetometer, sampling, based on Hall effect 2=13642
  magnetometer, simple, recording 4=8884
  magnetometer, vibrating sample 1=11996
  magneto-optical readout for magnetized oxides 3=14735
  magnetostrictor, vibrating, dissipative forces 3=19411
  materials for millimeter and submillimeter wavelength devices 1=6381
  memories, magnetic drum background noise reduction 4=16621

Magnetic devices—contd
memories, state of the art 2=13626
memory, central core, in multiple input scaler 4=27725
memory-core square-loop ferrites, comp. 2=23678
memory film elements, magneto-optical readout 2=13632
memory, Permalloy-sheet transfluxor array 2=13635
memory read-only device, thick-film 3=14733
memory systems, props. of mag. films 2=13630
memory wires, "distrib" thresholds 3=15849
microwave magnetic microscope 2=13641
microwave, use of $(ZnY)(Ba_2Zn_2Fe_{12}O_{22})$ 2=12745
modulators of even harmonic type, theory 3=4247, 17029
multilayer film structures, switching props. 2=13633
multipath cores, reversible flux rel. to irreversible noise 2=11754
nonlinear magnetics conference (1963) 4=14846
nuclear, field distrib. due to pole face windings 2=11755
parametric amplification, millimeter wave, antiferromag. materials 2=13684
particle accel., linear, 1 GeV, beam extraction, three magnets 3=16997
pendulum, torsion, with ferromag. suspension, field excitation 1=18980
permalloy with Au, for high-speed switching 1=10166
phase shifter, coaxial ferrite, for high power application 2=13678
phase transformations, magnetometer 2=1554
prism, magnetic, calc. of particle trajectories 4=11707
pull, calc., switchable or non., using permanent magnets 4=24792
pulse coils, multiple-turn, similarity theory 4=14854
pulse storage device for nuclear physics 1=7176
quadratic response, dispersion relns. testing 4=11740
quadrupolar lenses, strong focusing, without iron 1=8360
quantum magnetic dipoles, neutral, containment, toroidal 3=15271
radar pulse transformers, reset cores props. 2=14795
recording tape, noise theory 2=11753

earth's declination under sea 1=21085
electrical dust figure methods, optical projection 2=9676
by electron cyclotron resonance, field stabilization 4=16610
electron spin resonance method 3=2080
electrlytic tank analogues 0=290
electron lenses, on axis, direct-reading method 0=10957
electronic fluxmeter 0=7183
near ferromagnetic, with a.c. excited Helmholtz pair 1=553
ferroprobe magnetometer, for non-uniform fields, theory 4=640
by ferro-probes with longitudinal symmetrical saturating excitation, theory 1=16479
field contours 1=11999
field gradient meter, design 0=7182
field sweep for electromagnet 0=19867
film, pulsed 3=24426
films, anisotropy fields, secondary effects 3=4240
flux changes, precision method 3=14710
flux instrument for crystal anisotropy comparison 0=2416
fluxgate magnetometer, use in β-ray spectrometer degaussing 1=18979

Magnetic field measurement—contd
fluxmeter, compensation of thermal e.m.f. and galvanometer drift 1=7006
fluxmeter for high fields, liq. He temp. 4=27604
fluxmeter, high-sensitivity, rotating commutator 3=2076
fluxmeter, using n.m.r. 4=14849
fluxmeter, recording 0=3825
by free precession with electronic pumping 1=13149
galactic, detection by H radio line Zeeman splitting 0=18676
Galactic field, meas. from hydrogen line Zeeman splitting 1=31
Galaxy 3=9282
gaussmeter, diamagnetic 4=8885
gaussmeter, wide-range 0=2415
generator transducer, for 0-10 kOe 2=1552
geomagnetic vertical intens. at mag. equator 0=2002
gradient meas., using proton free-precession 3=7671
gradiometer, second harmonic flux-gate type 1=7948
gradient meter 4=638
Hall cell meas., edge effects in magnet gaps 3=14715
Hall effect devices for low-level detection 4=22736
Hall-effect instruments 1=7119
Hall-effect method for 100-17500 Oe 0=5373
Hall effect probes, accuracy 1=3032
Hall-effect sensor, multiple element 0=7184
Hall generators of InAs and InSb, for l.f. fields 2=7704
Hall magnetometer, for 2-15.5 kG flds. 3=5806
Hall probes, made of InAs 0=6123
Hall probes, voltage sensitivity 0=9135
Hall transducer appl. 3=14716
high flds, by n.m.r. 3=5808
hysteresis curves using magnetic open circuits 1=4690
induction-coil method 3=21922
induction, for weak a.f., size and wt. reduction by suitable core 4=16612
induction magnetometer, photocell circuits and spectral analysis 4=2318
inhomogeneous field, precision measurement 0=19865
interplanetary, Pioneer V magnetometer experiment 0=21317
iron losses in elliptically polarized mag. fields 0=11014
local effects by Rb-vapour magnetometer 2=15983
local fields in crystals, using Fe^{57} Mossbauer effect 0=11826
long-time change measurement of inhomogeneous field 1=10760
low fields, dynamic method using peaking strips 1=16476
low-intensity fields, using Ni—Fe films 3=14722
at low temperatures, high fields 3=5805
luminescence magnetometer 4=8887
mag. core flux patter determination 0=11013
by magnet giving equal field 3=17024
magnetic balance with feedback, sensitivity increase 2=20095
magnetic resonance methods, review 3=5031
magnetic surfaces, general formulae 2=15979
magnetic tensiometer 0=3826
magnetized disks and cylinders, calc. 2=15985
magnetometer, appl. n.m.r. of spin ½ particles 2=3785
magnetometers, automatic freq. control, and atomic oscillator types, for alkali metal vapour 4=21616
magnetometers, balanced-coil, for up to 20 Oe 2=7702
magnetometer based on n.m.r. 2=7703
magnetometer, compensating Hall type, thermostat controlled 2=1551
magnetometer, design 0=7182
magnetometers, using ferromagnetic resonance in YIG 4=21615
magnetometer, ferro-probe, with self compensating amplifier 4=11741
magnetometer, freq. shift 2=1553
magnetometer, frictionless recording torque 0=9132
magnetometer using Hall effect 4=16608
magnetometer nuclear resonance 2=1547
magnetometers, nuclear, signal-to-noise ratio 2=11747
magnetometers, optical, high-field 2=3129
magnetometer, optically pumped He^3 4=7931
magnetometer, proton, new possibilities 2=15982

Magnetic field measurement—contd
magnetometers, proton precession type, geophys. meas., accuracy, comparison with observatory data 1=1576-7
magnetometer, proton vector 0=15103
magnetometer, recording proton precession, for total mag. field meas. 4=11742
magnetometer, recording turbine, magnetic focusing systems 0=15106
magnetometer, Rb, self-oscillating, for earth's field 4=26867
magnetometer, rocket-borne 0=5372
magnetometer, rotating coil, for earth's field 1=5525
magnetometer, saturable-core, null-indicating 0=7186
magnetometers, sensitive, for mineralogy and paleomagnetism 4=3082
magnetometer, spinner type for rock demag. exper. 0=3829
magnetometer, stabilized torque 0=3828
magnetometer, torque type, recording 0=11011
magnetometer, torsion, for ferromag. films 3=24424
magnetometer, turbo-inductor 0=3827
magnetometer, vector field proton type 0=14161
magnetomer, vibrating-sample, motor driven 2=20092
magnetometer, vibration excitation 3=17021
magnetoresistance probe for small space 3=14721
meter for weak fields 4=14852
meter using magnetodielectric permeability var. with field 4=16611
microprobe, using Hall effect 2=7705
microsize probe, axial symm. 2=7706
microwave, near conducting perturbation 0=3833
n.m.r. apparatus 0=15104
n.m.r. method, modification for non-uniform fields 0=19864
nonuniform, use of ferroprobes 3=19401
nuclear magnetic resonance apparatus 2=5432
nuclear magnetic resonance device 1=16475
nuclear magnetic resonance magnetometer for earth's field 2=4689
nuclear magnetometer 1=7114
nuclear magnetometers, for inhomogeneous fields 4=14853
nuclear resonance magnetometer 1=4688
nuclear resonance magnetometer, autodyne-type, improved probe 2=17926
null indicator using ferromag. film instability 3=24425
optical pumping methods 1=13148
oscillations, very low freq., recording apparatus 2=13062
paramagnetic resonance used for meas. in v. small volumes 3=25519
peaking strip probes, h.f. properties 4=21518
permanent magnets, analogue procedure 2=17924
permanent magnets, teaching expt. 1=13147
pickup coils, induction, for weak audio-freq. fields 4=30015
plasma, appl. magneto-optical effect 2=1450
in plasma, multi-coil probe 3=16954
in plasma, with probes 0=3760
plasmas, using Zeeman effect 3=16955
point-by-point, use of Hall effect 3=12283
probe, photoconductive 4=3097
probe in plasma, error evaluation 3=9804
probe, toroidal pinched discharge 2=1441
probes, adjustment of double-frequency saturated type 4=16614
probes for plasma behaviour studies, h.f. response 0=17019
by proton magnetic resonance, in e.s.r. expts. 4=30070
by proton magnetic resonance method 2=1548-9
proton magnetometer, effect of rotation 3=465
proton magnetometer for 2-13 kOe 2=9675
of proton synchrotron, rate of change of field 4=14837
of proton synchrotron, use of Permalloy pickups 4=14836
in proton synchrotron, 7 BeV, X-block configuration 4=14833
in proton synchrotrons, with permalloy pickups 1=5526
radial and aximuthal components 2=20090
radio freq., by atomic beam stationary state transitions 4=30371
Rb vapour magnetometer, for geomag. meas. 4=27603
Rb vapour magnetometer, and optical pumping theory 4=5739
rock, coils, sensitivity maximization 4=4828

Magnetic field measurement—contd
rubber, natural, 2–340°K, using proton resonance fluxmeter 4=8890
Saclay synchrotron electromagnet segments 0=19851
satellite instruments 4=10769
satellite, review 3=25937
search coil method, accuracy 2=22294
sensitivity and signal-to-noise ratio improvement in suspended systems 4=2925
of 7 BeV proton synchrotron 4=14807
of 7 BeV proton synchrotron C-blocks 4=14832
in small air gap, using Förster probe 2=13647
small resonant scatterers, uses 2=17735
spinner magnetometer, calibration 4=8883
Sputnik III, magnetometer 2=9133
Stellarator, calc. 2=17849
stray fields above specimen 3=13266
stretched-wire detector 2=1550
in sunspots 3=11538
superconducting coils, low fields, probe sensitivity 3=21923
superconducting thin films, mag. field attenuation 0=10853
superconductors, from γ–γ ang. correl. 0=5232
superregenerator controlled by n.m.r. gradient 4=637
surface gradient of ferromagnetic substs. 0=13751
surface microfields, electron-optical method 3=3373
surface microfields on ferromagnetics, electron mic. meas. 3=2075
susceptibility, for crystals and solns., balance 2=11746
in synchrotrons, n.m.r. techniques 1=5519
terrestial, equipment at Nivernais 1=1581
thin films, by electron diffraction 0=3061
torque magnetometer, anisotropy-torque meas. 4=3085
transverse continuous fields, by n.m.r. 4=30074
two-dimensional, analytic continuation 0=1180
between 2° - 1200°K, up to 30 000 Oe 1=16488
ultrasonic method 0=11010
of varying field, continuous meas. and recording, use in proton synchrotron 4=14828
visual presentation of field lines 1=16477
weak field of terrestrial type 1=16474
weak, by n.m.r. of liquids 3=21420
wide range at 4.2° K 4=24784
using Cs frequency standard 0=15102
using Ge Hall effect, pulsed fields 4=16613
using H-ions cyclotron resonance 4=16609
InAs probe, using Hall effect 1=16480
Ni, stray fields above Bloch walls 3=19402
Rb vapour instrument, using optical pumping 2=5430
Sn–Pb supercond. detector 3=468

Magnetic fields

plasma, microfield, statistical distrib. 1=4591
in plasmas, rotating, quasi-stationary conditions 2=15915
plasma, spatial amplification in magnetoacoustic reson. 2=19953
plasma, spatial amplification in magnetoacoustic resonance 3=7544
pole-less, ferromag. cylinder, long, hollow, with conductors on inside surface 4=651
pole-piece design for given topography 4=648
potential of circular electric current 1=16492
preferred direction fluctuations thickness var. 4=22975
problem with axial symmetry 4=27605
production by flux compression 4=19157
production, high-entensity, pulsed, by capacitor discharge 0=19877
production, high-field coils, design and construction 0=19875
production of high fields, superconducting solenoids 4=16619
production, by implosion 0=9144
production, MG, explosion driven flux compression system 4=11744
production, miniature device for ~10 000 Oe 2=3131
production, 7tn-order external field 0=5374
production by small conducting spirals 4=2499
production, steady field, liq. H cooled coils 2=1557
production of strong fields, review 3=24428
production, very stable, 0.50 G 2=1555
production, 10^4G, using exploding wires 0=2310
of proton synchrotron, asymmetry 4=14824
of proton synchrotron, compensating pole windings 4=14822
of proton synchrotron, coupling between basic and measuring fields 4=14818
of proton synchrotron, effect of supply system changes 4=14838
of proton synchrotron, effect of vacuum chamber steel sections 4=14834
of proton synchrotron, horizontal component compensation 4=14835
of proton synchrotron, 7 BeV, C-magnets field variation 4=14829
proto-star 0=17090
pulsating 2-component field, in semi-inf. space, surface effects 1=5536
pulse coils, multiple-turn, similarity theory 4=14854
pulse, 480 kOe, production at low temps. 3=17026
pulsed high-intensity fields, production 2=9680
pulsed, production using electrolytic capacitor bank 0=17065
pulsed, review 0=9145
pulsed, steady and strong, using artificial delay line 0=19876
quadratic response, dispersion relns. testing 4=11740

Magnetic fields—contd
quadrupolar lenses, strong focusing, flatness better than 10^{-2} 1=8360
quantum theory aspect 1=8373
radiation belt, model, numerically computed 2=13059
reduction of a.c. induced, apparatus 2=1556
regulation of electromagnets using n.m.r. 0=19871
research, review 1=18976
research, review article 0=17063
ridged pole-pieces in orbital accelerators 1=9651
with rot. symm., ion optics 4=24755
rotating system of reference rel. to electrodynamics 4=21637
screening by circular disk 1=364
screening, effect on homogeneity of field of Helmholtz coils 4=30018
sector-shaped uniform fields, for particle double-focusing 2=17898
semiconductors, h.f., Hall-effect reinforcement 4=12868
shielding factors of concentric spherical-shell system 2=7710
shielding by superconducting films 2=1336
sixth degree cubic field, effect on rare-earth ions in crystals 1=17968
due to skew pair of linear currents 1=5533
soft magnetic bodies, of varying susceptibility, homogeneously magnetized 4=5740
solar, associated with 16 July 1959 solar flare 0=14429
solar corona 0=14430
solar, rel. to faculae, flocculi and coronal rays 1=18075
solar prominences, rel. to lifetime 0=18758
in solar system 0=3410
solar, variations rel. to flares 2=975
solenoid, one-coil, intensity amplitude rel. to material 3=19414
solenoid, rectangular 2=7712
solenoid section distrib. for axial uniformity of field 4=24790
solenoid, without external mag. field 2=22260
solenoids, superconducting, fluctuations 3=1889
solenoids, thick finite, calc. 4=24785
in solid, semi-infinite, induced by eddy currents 2=11751
solid single-turn coils, field distrib. at 2×10^5 c/s 2=17927
space charge flow 0=9079
spectrum analyzer, using Hall effect on InSb 4=30014
spherical cavity 0=13752
spiral ridge, particle motions 3=4225
stabilization, control by supercond. solenoids 3=14723
stabilization and fine control, field discriminator 2=1615
stabilization by use of maser 0=9191
stabilization method 0=11012
stabilization by n.m.r. maser 1=18974-5
stabilization for nuclear installations current source 2=22295
stabilization, using proton mag. reson. 2=1549
stabilization with superconducting tube 4=3088
stabilization, using electron cyclotron resonance meas. 4=16610
stabilizer, using Hall effect 4=30016
stabilizer using nuc. resonance techniques 4=757
stabilizer, proton-resonance 3=19404
stars, collapsing 4=26902
stellar, rel. to equatorial acceleration 1=15498
rel. to stellar instability 1=12771
stellar, toroidal, thermal generation 3=3585
stratified conductor, surface, in plane e.m. waves 3=4243
stray fields of conical pole pieces 0=7191
strong, coil design 1=3036
strong pulses, prod. in small region 3=4245
structure detm., by electron scattering 4=641
sunspot model 4=15941
sunspots intensity and orientation, from Zeeman effect, Fe I, λ6302 3=18628
sunspots, spatial analysis of mag. fields 0=18737
superconducting cylinder, flux quantization 4=5512
In superconducting cylinder, penetration, rel. to ohmic dissipation 3=24144
superconducting magnet coils, force-free designs 2=7524
superconducting sheets, high-field, distrib. 4=22942
superconducting thin films, calc. 4=396
in superconductors, penetration depth 1=18708

Magnetic fields—contd
superconductor, Pippard, critical, theory 4=8563
superconductors, shell configurations for uniform fields 2=11556
surface concept 4=14847

    Ni^{61}, Mössbauer effect, velo. var. 4=12582
    Ni–Cu alloys, thermoelectric power variation 3=20427
    NiF$_2$, antiferromagnetic reson., far i.r. 4=13302
    Ni–Fe(66:34), with heat treatment, effect on internal friction 4=23187
    O$_2$, and thermal cond. var., appl. to gas anal. 4=29245
    O$_3$, viscosity 1=1760
    Pb, superconducting, surface electrical losses, in l.f. fields 3=12033
    Sb, de Haas–van Alphen oscill. 3=4818
    Sb, u.s. attenuation, geometric resonance 3=4817
    Yb^{3+}, electronic structure 3=8379
    YFe garnet, ferromagnetic resonance, rel. to r.f. field 3=8701
Magnetic films
    (Heading introduced in 1964)
  anisotropy, biaxial, origin in polycrystalline films 4=13161
  anisotropy meas., electrostatic torsion balance 4=28798
  anisotropy, var. with substrate temp. 4=7248
  bibliography 4=22973
  computer memories, future developments 4=11750
  computer memory, creep and boundary displacement switching 4=11752
  computer memory, evaporated wiring 4=11751
  computer memory, interaction between elements 4=11753
  computer memory, optimum mag. parameters 4=11754
  computer memory, uniaxial pair with biaxial props. 4=11756
  computer memory, with dielectric layers, optical readout 4=11757
  computer memory wire elements, plated, switching characts. display 4=27614
  computer shift register, domain wall motion, nucleation 4=11755
  curling of magnetization, tapered edge films 4=13158
  distribution of spontaneous mag., stable periodic solution 4=7245
  domain struct. study, by Kerr effect, evaporated in vacuo 4=10265
  domain structure theory, uniaxial materials 4=7233
  domain-wall creep due to mag. pulses 4=7247
  domain wall creep mechanisms 4=13157

Magnetic films—contd
domain wall velo., reverse, Néel 4=13162
domain walls, 180^0, effective mass 4=1828
domains, microscopy, Lorentz 4=13159
e.m.parameters meas.using eddy currents 4=17642
electromagnetic wave absorption, u.h.f. due to mag. reversal 4=1827
environment effects on saturation mag. 4=17641
exchange const. meas., ferromag., from mag. fine struct. 4=17639
ferrite single crystal, structure 4=23586
ferromagnetic, lamellary structure, comments 4=23564
ferromagnetic reson. spectrum, effect of nonuniform mag. 4=13279
ferromagnetic reson., standing modes, k^2 field spacing var. 4=13280
ferromagnetic resonance linewidth 4=13278
ferromagnetic reson., surface spin pinning, volume inhomogeneity models 4=13277
ferromagnetic, spin wave theory, rel. to quasimomentum quantization 4=7249
ferromagnetic, steady-state B–H hysterisigraph 4=26301
ferromagnetic, evaporation, use of broad, self-sustaining Permalloy source 4=29182
hypercritical hysteresis loops, heat treatment 4=13156
hysteresis, permanent magnet model 4=26298
Kerr effect, longit., S/N ratio 4=26174
laser output modulation by multiple Kerr effect 4=19273
magnetic field prod., ferromag. 4=21619
magnetic switching in disperse anisotropy films 4=7246
magnetization ripple, exact theory 4=22974
magnetization ripple formation mechanism 4=13160
moment meas. by torsional vibr. method 4=22944
nonlinear magnetics conference (1963) 4=14846
Permalloy, aging and stabilization 4=13212
permalloy, anisotropy 4=17658
permalloy, anisotropy dispersion 4=26326
Permalloy, domains, reversed, nucleation and growth, study using partial switching 4=23003
Permalloy, domain structure, dense-banded 4=7281
Permalloy, em wave absorpt. by spin interaction with stripe domains 4=28697
Permalloy, evaporation system and magnetic properties 4=20548
Permalloy, ferromagnetic resonance meas. at low bias field 4=10307
Permalloy, ferromag. reson. at 36 kMc/s 4=7307
Permalloy, ferromagnetic reson., standing modes, k^2 field spacing var. 4=13280
Permalloy, flux reversal at low temps. 4=13218
Permalloy, hysteresis, anisotropy, n, He^3 effects 4=13216
Permalloy, mag. and crystallite structure rel. to contrast of electron microscope image 4=30715
Permalloy, mag. annealing 4=20549
Permalloy, magnetization, incoherent rotation, switching signals and domain pictures 4=28799
Permalloy, magnetization reversal, along hard direction 4=10283
Permalloy, magnetization reversal process 4=23002
Permalloy, mag. fluctuation props., theory 4=7284
Permalloy, with rot. initial susceptibility, mag. props. 4=23006
Permalloy, stress effects 4=13211
Permalloy, structure and switching 4=26327
Permalloy, switching, effect of pulsed mag. fields rise time 4=23004
Permalloy, uniaxial, fine structure 4=26324
Permalloy, uniaxial, mag. ripple, domain splitting and dispersion of easy axis 4=20550
permalloy, vacuum deposited in mag. field, mag. anisotropy, field orientation depend. 4=26325
Permalloy—Mo 4=13213
pulse mag. reversal, effect of nonuniformity 4=13155
reversal loop, with alternating plane stresses 4=15641
review 4=22973
ripple stress origin in ferromag. films 4=26300
rotational props. and uniformity, surface meas. 4=3086
sheets, eddy-current losses, theory 4=13163
spin wave dispersion, deviation from square law 4=17673
spin-wave resonance, dipole-narrowed inhomog. broadened lines 4=13284
spin-wave resonance, rel. to temp. 4=13285
superconducting, microscopic theory 4=24496

Magnetic films—contd
superparamagnetic, thermal energy effects 4=17637
switching by avalanche of domain nucleations 4=26299
79 NMA alloy, magnetization reversal 4=26328
C, electron microscopy image contrasts 4=23574
Co, ferromagnetic reson., standing modes, k^2 field spacing var. 4=13280
Co, hysteresis, rot., and torque 4=13169
Co, 10-100 A, magnetization, longitudinal and transverse 4=13175
$CoFe_2$, optical Faraday effect 4=22879
$CoFe_2O_4$, optical Faraday effect 4=22879
Co—Ni—P, reversal mechanism 4=13171
Fe, anisotropy 4=26321
Fe, anisotropy and coercive force, var. incidence angle 4=28808
Fe, ferromagnetic reson., standing modes, k^2 field spacing var. 4=13280
Fe magnetization ripple formation mechanism 4=13160
Fe, optical Faraday effect 4=22879
Fe, stripe domains, rotatable anisotropy 4=26306
Fe, thin sheets, eddy-current losses meas. 4=13164
Fe—Ni and Fe—Ni—Co, coupling through Cr or Pd film 4=20543
(17%)Fe–(80%)Ni–(3%)Mo, domain struct. and hysteresis loops u.s. vibrations 4=22978
MnBi, oriented, magneto-optical rot., Kerr, ferromag. reson., temp. var. 4=13045
Mo—Permalloy 4=13213
Ni, anisotropy 4=26321
Ni, anisotropy, temp. var. 4=7275
Ni, demagnetization under stress-induced uniaxial anisotropy, wall shift field strength theory 4=30713
Ni, ferromag. relax., phonon generation at 9 kMc/s 4^{0}K 4=23035
Ni, intensity temp. var., depending on deposition 4=22997
Ni, magnetic coercive force 4=7277-8
Ni, magnetization, effect of uniaxial anisotropy 4=26319
Ni magnetization reversal on cold rolling 4=13208
Ni, magnetoresistance, Hall effect, room and liquid N temps. 4=12862
Ni on NiO, exchange anisotropy interactions, torque study 4=13209
Ni, optical Faraday effect 4=22879
Ni–Fe, anisotropy 4=26321
Ni—Fe, anisotropy, negative, var. with composition and deposition temp. 4=13202
Ni–Fe anisotropy with double evap. source 4=7270
Ni—Fe anisotropy in homogeneity 4=13200
Ni—Fe, domain wall creep, temp. var. 4=13201
Ni—Fe, dynamic behaviour rel. to frequ. 4=10266
Ni–Fe, effect of thickness, composition and electrodeposition conditions 4=7271
Ni—Fe, ferromagnetic reson., line width and anisotropy dispersion 4=13288
Ni–Fe, hysteresis 4=26323
Ni–Fe, magnetoresistance, Hall effect, room and liquid N temps. 4=12862
Ni—Fe, magnetoresistance meas. 4=28534
Ni—Fe, narrow, domains 4=13203
Ni–Fe, new domain type 4=22998
Ni–Fe, switching behaviour 4=4367
Ni—Fe, thin sheets, eddy-current losses meas. 4=13164
Ni—Fe—Cr 4=13204
NiFe, field var. effects 4=22973
NiFe—Mn 4=20547
NiFe—Mn—NiFeCo, coupling types 4=20547
$NiFe_2$, optical Faraday effect 4=22879
$NiFe_2O_4$, optical Faraday effect 4=22879

Magnetic hysteresis
See Magnetization process

Magnetic measurement
See also Magnetic field measurement. Entries describing measurement methods for specific magnetic quantities and effects may also be found listed under the various headings for the subjects concerned
absolute susceptibilities new measuring method 1=16483
accommodation of magnetization phenomena, automatic recorder 0=19863
adiabatic demagnetization, susceptibility, meas., by recording fluxmeter 3=14709
after-effects in ferromagnetics 0=2428
amplifiers, integrating, theory and application 4=8597

Magnetic measurement—contd
anisotropies, single crystal, oscillographic method 2=10668
anisotropy comparator, fluxmeter 0=2416
anisotropy, feeble, meas. over wide temp. range 0=11837
for anisotropy at high temp., self-exciting torsion pendulum 1=10756
anisotropy, induced, in thin films 3=15847
anisotropy meter for high and low temperatures, and application 4=636
anisotropy of shape, dia. and paramag. crystals 2=18885
anisotropy, torque magnetometer, automatic 0=2417
antiferromagnetic domains, visual obs. using gyrotropic birefringence 3=14713
apparatus for ferrite props. at X-band frequencies 0=2419
astatic magnetometer, for mag. moment temp. dependence meas. 0=9133
automatic, using analogue digital converters 3=9907
balance for automatic susceptibility meas. 3=21924
balance, horizontal translational type, varying temp. 4=20508
balance to meas. susceptibility of para-and ferromagnets 3=24422
balances, noise reduction in amplifier circuit 3=5608
balances, strain gauge, for ferromag. and paramag. 2=9672
ballistic meas. coils, mag. correction factor 3=9900
basic quantities and procedures at NBS 2=17921
coercive force rel. to temp., recording instrument 2=9673
compensation of earth's mag. field 3=19399
conference, Kyoto, September (1961) 2=12750
cryostat for ferromagnetic meas. 1=18685
cryostat for susceptibility meas., 4.3° to 300°K 3=2078
Curie–Cheneveau balance, counter torque quartz fibre adaptation 0=19872
Curie point, differential method 2=7700
Curie point, for Heisenberg model 0=13838
Curie point meas. using a.c. permeability 3=23152
Curie point, oscillating specimen magnetometer 4=5737
Curie temp. det. from susceptibility, errors 1=20067
Curie temp., from h.f. permeability temp. var. 4=22943
d.c. permeameter; two-core detector for 0=19868
demagnetizing factor of cylindrical rods 1=18972
demagnetizing functions, for cylindrical rods 1=3033
domain studies, contrast in magneto-optic apparatus 3=14712
dynamic, hysteresis, by damped oscill. fields 3=5804
electromagnetic, precision, conference, Boulder, Aug. 1962 3=9689
electron optical measurements of magnetized objects 1=10758-9
Faraday rotation meas. apparatus 0=667
Faraday rotation, microwave, using bimodal cavity 3=12316
ferrimag. domains, observation by Faraday rotation 1=17972
ferrite estimation in stainless steel welds 1=12002
ferrites, permeability tensor at 3000 and 8500 Mc/s 1=7116
ferrites, susceptibility tensor 3=20612
ferrites, susceptibility tensor and complex dielec. susceptibility 0=10171
ferromag. cylinders, electron-optical method 2=7707
ferromag. films, easy-axis and Hk probability density functions 2=23664
ferromag. powders, anisotropy distrib. detm. 3=1092
ferromag. specific magnetization by pendulum balance 2=11748
ferromag. thin films, anisotropy recorder 2=9671
ferromagnetic films, anisotropy 3=12284
ferromagnetic films, by balance, automatic torque, sensitive 3=14707
ferromagnetic films, using equatorial Kerr effect 0=18195
ferromagnetic films, hysteresis loops 3=24424
ferromagnetic, hysteresis loop by Kerr effect 3=9904
ferromagnetic rotl. hysteresis 3=4239
ferromagnetic thin films, magnetization curves 3=8674
film mag. moment, by torsional vibr. method 4=22944
films, high-speed magnetization reversal, direct obs. method 3=14711
films, magneto-optical apparatus 0=12666
films, rotation and uniformity, instrum. 4=3086
films, solid, mag. analysis by electron diffraction 3=5014

Magnetic measurement—contd
geomag. micropulsations, detector calibration 1=21088
Gouy apparatus for temp. range 77°-350°K 3=14717
gyromagnetic ratio, magnetomechanical detm. 3=467
Hall probes, review 1=18970
high pulsed fields 4=19154
hysteresigraph 0=9134
hysteresigraph, B–H, for ferromag. films using magnetometer 4=26301
hysteresigraph, shear compensated, for thin films 1=11998
hysteresis loops, dynamic or static, apparatus 2=15981
hysteresis recorder, electronic, for high-permeability strips 4=26294
induction, with ballistic galvanometer 3=17018
induction in high mag. fields at low temp. 3=6689
l.f. rot mag. losses in ferrites 0=3080
liquids, susceptibilities, Quincke method 3=17016
low temps., small radiation shield 4=14861
lunar surface and subsurface susceptibility 3=13856
M–H loop tracer for circumferential fields 1=7115
mag. anisotropy of thin films, deposition and measuring apparatus 1=16481
mag. phase transitions, by miniature coil, pulsed-field techniques 3=17022
magnetic analysis methods 1=6250
magnetic balance, Sucksmith ring, vibration reduction 0=5371
magnetic balance, transducer type 0=12664
magnetic moments, small, permanent, of irreg. shaped bodies 4=8889
magnetization of crystals 1=9013
magnetization entropy of paramagnetic 1=14672
magnetization of ferromag. sample, electron optical method 1=9666
magnetization, in fields up to 70 000 Oe 4=14850
magnetization, mag. induction meas. using electron beams 2=20091
magnetized ferrite, using dielectric test set 1=12001
magnetogram reader, semiautomatic 3=11463
magnetometer based on Hall effect 2=13651
magnetometer, Rb vapour 2=13646
magnetometer for rock magnetism 3=9905
magnetometers, rocket-borne 3=21140
magnetometer, torsion-pendulum type, for film studies 2=17922
magnetometer, vibrating reed, for saturation magnetization 1=352
magnetoresistance of ferromag. films, rotating mag. field technique 3=14470
magnetostriction, under high hydrostat. pressure 3=1150
magnetostrictometer, automatic recording 0=2417
magnetothermal, analysis, review 3=466
microbalance, for susceptibilities of crystals 4=19155
moment, null method 0=19869
moments, torsion balance 4=16615-6
paramagnetic cpds. in soln., susceptibility 3=4242
particles ~ 1 μ, torsion balance 3=7672
use of permalloy sensors in proton synchrotron meas. 4=14826
permeability, by admittance meter 1=16487
permeability, complex, using Q-meter 0=18201
permeability complex, with Q meter permeability 3=14471
permeability determination, at low frequency, with non-resonant cavity, possibility 3=7673
permeability of ferromag. strips 2=13650
permeability, reversible, 50 kc/s to 3 Gc/s 3=24423
permeameter, for permanent magnets 3=14719
permeameter, r.f., basic equations 3=14720
permeameter, versatile switching arrangement 2=17923
photomagnetic susceptibility by vibr. reed balance 2=9674
piezo-susceptibility, inductance potentiometer 3=12288
plate parameters, eddy current method 3=9902
prep. of Ta single crystals for critical field meas. 0=8955
principal susceptibilities of triclinic crystals 3=17019
remanence, particles near single-domain size 3=19400
"reptograph" accommodation phenomena meas. 0=12663
rictometer system for compass calibration 0=11009
rock sample, astatic magnetometer 3=12287
rocks, remanent moment, temp. var. meas. 3=14708

Magnetic measurement—contd
- saturation magnetization, by torsion balance method 4=3083
- saturation meas. by magnetic balance, image effect 1=16482
- separation for paramag. powders analysis 3=9903
- servo magnetic balance 3=19412
- small induction fluxes by ballistic method 2=234
- small mag. forces at low temp. by Faraday method, problems 2=7701
- small samples, para. and diamag. susceptibility 2=20093
- soft materials, losses meas., calorimetric method 2=3127
- spin-wave magnetic moment detector 1=16486
- stability, long-term, beam balance method 1=13150
- steel, sheet, magnetostriction vibration spectrum 4=23007
- susceptibilities of small samples, Gouy and Thorpe—Senftle methods 3=12286
- susceptibilities, solids and liquids, 400°-60° K, balance and cryostat 4=21612

Dy-Y solid solutions variation with temp. and composition 3=15745
Er, high field effects, and internal fields 4=13109
Er, mag. ordering, theory 2=4198
Er, neutron diffraction study 298°–4.2°K 1=6348
Er_2O_3, ferrimag. and antiferromag. props, 1.3–300°K 0=13839
Er_2O_3, neutron scatt., energy distrib. 3=743
ErP, moments, structure, exchange energy 4=28773
$Er_2(SO_4)_3.8H_2O$, anisotropy and moments, 80°–300°K 1=17968
Eu divalent compounds 3=15743
EuFe garnet, Sm^{3+} hyperfine interaction and electronic relaxation 2=12647

Magnetic properties of substances—contd
Fe atoms in transition metal alloys, local mag. moment 2=4197
Fe cpds., local mag. fields, measured using Mössbauer effect 1=6248
Fe Laves phases, Mössbauer effect 2=3816
Fe^{+++}, in dilute systems 0=8084
Fe—Al alloys, internal mag. fields and saturation magnetization 3=15734
Fe—Al solid solns., ordering, mag. interact. 3=6871
$FeAl_2O_4$ solid solution 0=11829
$FeCl_2$, "metamagnetic" props. 2=16919
Fe—Co alloys, mag. moment distrib. 3=18098
Fe—Co, temp. dependence of magnetic anisotropy 0=18182
Fe—Cr alloys, susceptibility 0=4480
$Fe_{2x}Cr_{2-2x}O_3$, corrundum mag. lattice, spin configuration 4=30701
Fe—Cu solid solns., metastable 4=22988
FeF_2, h.f.s. of Fe^{57} in paramag. and antiferomag. states, from Mössbauer effect 1=1197
FeGe, 100-1100°K 4=7621
Fe_5Ge_3, anisotropy, saturation magnetization 4=26310
Fe-Mg titanates, mag. susceptibility 4=26271
Fe_2N, orthorhombic 0=11830
$Fe_{3-y}N$ $(0 < y < 1)$, hexagonal 0=11830
Fe—Ni, temp. dependence of magnetic anisotropy 0=18182
FeNiN, tetragonal 0=11830
$Fe_{4-x}Ni_xN$ $(0 \leq x \leq 3)$ 0=11830
α-Fe_2O_3, corrundum mag. lattice, spin configuration 4=30701
γ-Fe_2O_3, mag. field at nucleus, by Mössbauer effect 1=14745
FeO—SiO_2—CaO melts, susceptibility, temp. and composition depend. 0=18163
Fe_3O_4 solid solution 0=11829
$Fe_3(PO_4)_2 . 4H_2O$, ferrimag. and antiferromag. props, 1.3-300°K 0=13839
FeRh 2=12662
Fe—Rh system, hyperfine fields and mag. moments 3=15733
FeS, electron-ordering transition at approx. 140°C 2=12691
$Fe_{1-\delta}S$, neutron diffraction study 0=11913
$Fe_{1-\delta}S$, neutron scattering, magnon calc. 4=28827
$Fe_{0.902}S$, structure, neutron diffn. meas. 4=28762
Fe_7S_8, magnetocrystalline anisotropy 3=1025
$FeSe_{1+x}$, temp. depend. 1=1206
$FeTe_2$, susceptibility at 15-1200°K 0=4481-2
$FeTe_{0.95}$, susceptibility, temp. depend. 1=1248
$FeTiO_3$—Fe_2O_3, heat treated, order—disorder transformations 0=670
$FeTiO_3$ and $FeTiO_3$—Fe_2O_3 solid solutions, ferrimag. and antiferromag. props., 1.3-300°K 0=13839
FeVO system 2=12697
Ga, temp. depend. 2=744
Ga, temp. depend. 3=5017
$Ga_{2-x}Fe_xO_3$, 4-350°K props. 3=15777
β—Ga_2O_3, structure discussed 0=16321
GdFe garnet, susceptibility below the Néel pt. 1=14746
Gd—Mn alloys, saturation mag. moment 2=12925
$Gd_3Mn_2GaGe_2O_{12}$, exchange interaction 0=3096
Ge, calc. from X-ray meas. of electron density 4=7216
Ge—α-Fe solid solution 3=3340
Ge, p-type, susceptibility, rel. to extrinsic density, 1.3-300°K 0=18168
Ge, susceptibility of defect electrons 0=2979
Ge, susceptibility of holes, theory 1=20044
Ge, susceptibility at low temps. rel. to exchange gas effects 2=7701
Ge, susceptibility of weakly interacting donors, 1.35-4.2°K 2=16890
Ge—Si, susceptibility, 300-1200°K 1=6253
$GeZnBaO_4$ 4=23473
He^3, liquid, possible low-temp. phase, nuclear paramag. susceptibility, critical field prediction 1=2919
He^3, liquid, self-diffusion of magnetization and nuclear susceptibility, 0.03-1.3°K 0=19542
He^3, liquid and solid state 0=3699
He^3, liquid, susceptibility 1=18691
He^3, liquid, susceptibility, down to 0.025°K 2=17712
He^3, liquid, T^3 and T^2 depend., Fermi liq. theory 4=5494
He^3, liquid, nuclear susceptibility under pressure 3=1882
He^3, liquid, nuclear susceptibility under pressure 4=14478

Magnetic properties of substances—contd
He^3, n.m. susceptibility, 4.2 Mc/s, 1°-3°K 4=14480
He^3, near melting curve min. 2=19800
He^3, solid, β-phase, susceptibility, below 1°K 4=14505
He^3, solid, susceptibility 0=8884
He^3, solid, susceptibility, calc. 0=14921
He^3, susceptibility rel. to superfluid phase transition, at 2000 p.s.i., 0.003°K, no evidence 4=14479
He^3 vapour, spin susceptibility, near 3.0°K 4=14204
He^3 and He^3—He^4 mixtures, susceptibility, rel. to density, 0.92° to 2.9°K 4=14481
HgO, susceptibility at various temps. 1=17929
Ho, high field effects, and internal fields 4=13109
Ho, hydrogenated, susceptibilities, atomic moment 2=12736
Ho, mag. ordering, theory 2=4198
Ho, mag. structure detm. by neutron diffraction 3=1108
Ho, remanence, molec. field and approach to saturation at low temp. 0=4472
Ho cpds., susceptibility 2=8828
$HoCo_2$, mag. structure 3=8682
$HoFeO_3$, ferrimag. and antiferromag. props., 1.3-300°K 0=13839
Ho—Mn alloys, saturation mag. moment 2=12925
Ho_2O_3, ferrimag. and antiferromag. props., 1.3-300°K 0=13839
H_2O_4, neutron scatt., energy distrib. 3=743
HoP, moments, structure, exchange energy 4=28773
In, 4.2-300°K 1=20048
InAs, susceptibility 0=4469
InAs, InSb, susceptibility, temp. var. 4=28766
In—Bi (1.5-4 at.%), supercond., temp. var. 4=18571
InSb, susceptibility, rel. to extrinsic carrier density, 1.3-300°K 0=1771
In—Sn alloys, supercond., and transition order 4=18576
$IrSb_2$, zero mag. susceptibility 2=10875
KCl, imperfection centres in coloured crystals 2=6652
$K_3Fe(CN)_6$, susceptibility 2=20089
K (Mn, Co, Ni) F_3, superexchange interaction 3=25553
KMF_3, $(M = Cu^{2+}, Ni^{2+}, Co^{2+}, Fe^{2+}$ and $Mn^{2+})$ n.m.r. F^{19} shift dependence, meas. 4=28896
$KNiF_3$, molec. orbital analysis 3=936
K_2NiF_4 structure, 4°K upwards 3=11024
K_2ReBr_6 2=2272
K_2ReCl_6 1=8988
$La_2Co_3(NO_3)_{12} . 24H_2O$, susceptibility, rel. to crystal structure 3=8867
$La_2Mg_3(NO_3)_{12} . 24H_2O$, adiabatic demagnetization, proton polarization 2=23722
Li metallic, susceptibility 0=8029
$LiCuCl_3 . 2H_2O$ 0=12047
$LiMnPO_4$, ferrimag. and antiferromag. props., 1.3-300°K 0=13839
$Li_xMn_{1-x}Se$, double-exchange interaction, role in mag. props. 1=2466
LiH molecule, magnetic susceptibility and shielding 3=8260
$MO . Mn_2O_3$ (M = Mn, Co, Zn, Mg), triangular moment arrangement 0=4499
Mg, mag. susceptibility temp. depend. 2=18886
$Mg^{2+}Co_2O_4$, spinel, superexchange 4=13274
Mg—Mn alloys, dilute, with low-temp. resistance minimum 3=4996
$Mg_xMn_{3-x}O_4$, exchange anisotropy 1=7768
$Mg^{2+}Rh_2O_4$, spinel, superexchange 4=13274
Mn acetate, hydrated, mag. susceptibility at liq. He temp. 1=6258
Mn^{++}, in dilute systems 0=8084
Mn formate $.2H_2O$, and two kinds of Mn ion 4=26266
Mn hydrated formates, low temp. 3=18056
Mn^{3+} ionic cpds., props. rel. to crystal symmetry 1=14670
Mn uranate mag. structure 3=3320
$MnAu_2$, metamagnetic 0=13737
$MnAu_2$, spin screw struct. 2=12640
$MnAu_3$, temp. var. of resistance 4=20515
MnBi, heat treatment effects and order-disorder transform. 4=1798
Mn—Bi powders 1=7750
MnBi, temp. dependence of magnetic anisotropy 0=18182
$MnBr_2$, ordering of spins rel. anomalous sp. heat 4=3993
$Mn^{2+}Co_2O_4$, spinel, superexchange 4=13274
$Mn_xCr_{1-x}B$ 1=20063

Magnetic properties of substances—contd
$MnCr_2O_4$, mag. struct., theory 2=12669
$MnCr_2O_4$, rel. to spin configuration 0=16145
$Mn_{0.2}Cr_{0.8}Sb$, neutron diffraction study 0=3043
$Mn_{2-x}Cr_xSb$, exchange-inversion magnetization, theory 0=18206
Mn–Cu alloys, susceptibility, internal friction 2=12737
MnF_3, ferrimag. and antiferromag. props., 1.3-300°K 0=13839
$Mn_xFe_{1-x}B$ 1=20063
$Mn_xFe_{3-x}O_{4+v}$, initial permeability, time decrease 0=11887
$Mn_xFe_{3-x}O_4$ spinels, triangular moment arrangements 1=6352
$Mn_{3.4}Ge$, face-centred tetragonal phase 1=15144
$Mn(HCO_2)_2.2H_2O$, susceptibility, low-temp. 4=28769
$Mn_{4-x}Mn$, (M = Cr, Fe, Ni) 0=671
Mn_4N, mag. structure, neutron diffr. study 0=11850
Mn_3O_4, rel. to spin configuration 0=16145-6
Mn_3O_4 with Zn^{2+} or Mg^{2+} substitution, exchange anisotropy 1=7768
MnOOH, structure, neutron diffn. meas., 4.2°K 4=28770
MnP, metamagnetic state (below 50°K) 3=15735
MnP, narrow band electron spin correl. model 4=12683
$Mn^{2+}Rh_2O_4$, spinel, superexchange 4=13274
βMnS, anisotropic superexchange 2=12797
αMnS, sintered, mag. susceptibility, 300-1244°K 0=4471
MnS, susceptibility, rel. to oxygen impurities 3=25554
$MnSO_4$, susceptibility 2=20089
Mn_2Sb, temp. dependence of magnetic anisotropy 0=18182
Mn_2Sb, Cr-modified, domain patterns 2=2285
Mn_2Sb, Cr-modified, ferrimag. to antiferromag. transition, neutron diffr. study 1=1242
MnSb—CrSb system, magnetic structure 3=8698
Mn_2Sb, anisotropy energy rel. to temp. 3=1129
MnTe, Cr-doped, susceptibility 2=18700
$MnZnF_2$, theory 2=2292
Mo–Re supercond. in mixed state, vortex rather than laminar struct. 4=24508
NO in β quinol clathrate, susceptibility 0=10097
Nb alloys, susceptibility rel. to composition and O_2 solubility 1=20040
Nb, superconductivity persistent currents, effects 3=3951-2
Nb_3Sn, superconducting magnetization 2=13507
Nb—Zr(25%), superconducting, cold work effects 4=11479
Nb—Zr, superconducting persistent currents, effects 3=3951-2
NbZr wire, magnetization and transport current 4=410
Nd, calc. 0=11807
Nd ethylsulphate, nuclear orientation of Nd^{147}, saturation correction for susceptibility 1=12147
Nd, mag. moment at liq. He temp. in strong field 0=13776
$Nd_2(SO_4)_3.8H_2O$, anisotropy and moments, 80°–300°K 1=17968
Ni acetate, hydrated, susceptibility at liq. He temp. 1=6258
Ni arsenides, atomic moments and magnetic coupling 3=15738
Ni, superparamagnetic, temp. depend. of spontaneous magnetization 1=6307
$Ni^{2+}Co_2O_4$, spinel, superexchange 4=13274
Ni^{2+}, mag. form factor, orbital contrib., neutron scatt. cross-section 1=14667
Ni—Cu alloys, anomalous Righi—Leduc effect 1=9020
NiF_2, mag. ordering, n.m.r. study, 4.2-268°K 1=1282
$(Ni, Fe)_3Mn$ alloys, exchange anisotropy 1=7742
$NiFe_{2-x}V_xO_4$ spinel, sat. magnetization and susceptibility rel. to temp. 3=1008
Ni–Ga phases 4=4327
Ni–In phases 4=4327
NiAs-type crystals, exchange-inversion magnetization, theory 0=18206
$NiCl_2.6H_2O$, susceptibility, at low temp. 0=11921
Ni–Co, temp. dependence of magnetic anisotropy 0=18182
$Ni^{2+}.6H_2O$ in crystalline salts, anisotropy 4=25830
Ni_3Mn, saturation changes during plastic deformation 0=21112
$NiMnO_3$, ferrimag. and antiferromag. props, 1.3-300°K 0=13839
Ni_3N_{1-16}, hexagonal 0=11830
$Ni(NO_3)_2$ hydrates, low temp. 4=30703
$Ni^{2+}Rh_2O_4$, spinel, superexchange 4=13274

Magnetic properties of substances—contd
NiS, structure, neutron diffn. meas. 4=28762
Ni–Sn phases 4=4327
NpF_6, susceptibility, theory 0=7768
NpF_6 in UF_6 2=18890
O, 4.2-27°K, neutron diffr. exam. 4=7633
O, liquid, short-range order, neutron diffr. study 0=12414
OsF_6 1=3543
PT_3Co, saturation changes during plastic deformation 0=21112
Pb-base superconducting alloys 3=9684
$PbOFe_{12-x}Al_xO_{18}$, ferrimag. and antiferromag. props., 1.3-300°K 0=13839
Pd, absence of antiferromagnetism 3=15913
Pd, role of hydrogen atoms 3=25749
Pd—Fe alloys, atomic magnetic moment 3=15737
Pd(hydrogenated)–transition metal alloys 2=16675
Pd and Pt complexes, susceptibilities and g-values 1=10128
Pd—transition metals, mag. interactions 3=3078
PdF_3, neutron diffr. study 1=1251
Pd-Rh alloys, susceptibility 1=1441
Pm_2O_3, susceptibility, 25°C 4=1805
Pr, calc. 0=11807
PrH (x = 2.02-2.75), variation with temp. 3=15744
Pt–transition metals, mag. interactions 0=11833
Pt-Au alloys, susceptibility 1=1441
Pt–Fe alloys, Pt enriched 0=13766
Pt-Ir alloys, susceptibility 1=1441
$PtSn_2$, mag. susceptibility, d-electron band filling 2=6706
Pu nitrides and sulphides 3=16473
$PuD_{2.74}$, ferro- or ferrimag. props. 3=15783
$PuH_{2.74}$, ferro- or ferrimag. props. 3=15783
RuF_3, neutron diffr. study 1=1251
$Ru_2O_4.Y_2O_3$ powder, susceptibility 2=21288
Sc, 77-1100°K 4=1807
Sc, susceptibility, 100° to 1000°K 3=25508
Si, calc. from X-ray meas. of electron density 4=7216
Si, n-type, susceptibility, 3-300°K 0=10099
Si, susceptibility of defect electrons 0=2979
$SiMgBaO_4$ 4=23473
$SiR_aH_bX_c$ where R is alkyl and X halogen, and bond interactions 4=30467
$SiZnBaO_4$ 4=23473
Sm cpds., susceptibility 2=8605
SmH (x = 1.99-2.88), variation with temp. 3=15744
Sn, film, supercond., mag. moment 2=16883
Sn, film, supercond; mag. moment 3=6687
Sn, grey, calc. from X-ray meas. of electron density 4=7216
Sn–In alloys, mag. moment, in intermediate state, 2°K to transition temp. 0=7033
Ta carbide, susceptibility rel. to C content 4=13448
Ta, Nb, V at He temps. 2=6292
Tb, ferro and antiferromag. props. 3=15742
Tb_2O_3, neutron scatt., energy distrib. 3=743
TbP, moments, structure, exchange energy 4=28773
Th nitrides and sulphides 3=16473
Ti^{3+} caesium alums, susceptibility, 300-100°K 0=18167
TiO_2O_3, 4.2-300°K 0=11799
Tm ethylsulphate, susceptibility, 1.3-200°K, crystal field splitting 2=23032
Tm, rel. to heat capacity 1=11163
Tm, low temp. studies, in strong fields 0=11842
Tm, mag. structure detm. by neutron diffraction 3=1108
U compounds, tri and tetra-valent, and U electron structure 4=1216
U nitrides and sulphides 3=16473
UAl_2, susceptibility 3=8730
$UCoO_4$ 2=12662
UD_3 and UH_3 β-modification, susceptibility 3=6692
UF_4 1=11412
U–Nb alloys, susceptibility, 293–1200°K 1=17609
V, susceptibility anomaly at 245°K 1=7735
V—Cr solid solutions, mag. susceptibility 1=1195
V^{3+} alums, susceptibility, 300-100°K 0=18167
V-H alloys 2=12922
VO^{++}, in dilute systems 0=8084
V_2O_3, 4.2-300°K 0=11799
V–Ta (5 at. %), supercond. 4=18620
$V_{0.95-x}Tc_xAl_{0.05}$ (x up to 0.60) 4=7357
V_3X intermetallic cpds., susceptibilities and Knight shifts, theory 1=5062

Magnetic properties of substances—contd
W oxides, susceptibilities, non-stoichiometry study 2=2266
YFe garnet, effect of In substitution on permeability 1=6372
XNi_2 (X = yttrium or lanthanide), magnetic props. of Laves phases 3=15746
YbFe garnet, magnetocrystalline anisotropy 1=3925
YbFe garnet, Yb–Fe exchange interaction, spectral study 1=8996
$Yb_2(SO_4)_3 \cdot 8H_2O$, mag. anisotropy, moment of Yb^{3+} 2=16582
YCo_5, mag. structure 3=8682
Y–Eu garnets, mag., crystal props. 3=3124
YFe garnet, adiabatic demagnetization, 1-4°K 0=16143
Y-Mn alloys, saturation mag. moment 2=12925
YNd garnet, magnetization curves and structure 3=23183
Yt iron garnet, magnetostatic modes in disks and rods 0=16154
Yt iron garnet, in microwave region 0=11896
Zn, susceptibility, 1.2-300°K 2=21291
$Zn_xMn_{3-x}O_4$, exchange anisotropy 1=7768
$(ZnY)(Ba_2Zn_2Fe_{12}O_{22})$, susceptibility and microwave mag. field 2=12745
antiferrimagnetic
See also Antiferrimagnetism.
(subheading introduced in 1961)
alloys, centred cubic binary, types of ordering theory 2=6818
alloys, f.c.c., 3d transition metal, low-temp. specific heat 4=12639
antiferromagnetic whose mag. ions form f.c.c. lattice, susceptibility 1=1243
antiferromagnetics, feeble ferromagnetism, conditions 1=20154
azurite, $Cu_3(CO_3)_2(OH)_2$, Néel temp. from heat capacity at 1.7-3.6°K 0=1559
azurite, susceptibility meas. down to 1.4°K 4=17668
azurite, susceptibility, transition point 1=11457
azurite, symmetry 1=7772
azurite, transition from paramag. 2=10639
1,3-bisdiphenylene-2-phenyl allyl, down to 1.3°K 4=4391
chromic chloride, principal magnetizations 1=10174
cpds. semiconductors, group 3d metal mag. arrangement rel. to elec. cond. 2=23303
crystal polar–polar and polar–neutral structures 4=10493
crystals, nuclear spin interactions 0=13888
crystals, Raman spectra, observation possibility 3=8588
crystals, with two sublattices, piezomagnetism 4=30726
cubic lattice, mol. field calc. of Néel temp. 3=3134
cupric formate tetrahydrate, two-dimensional 4=10298
αα–diphenyl–β–picryl-hydrazyl, antiferromagnetism 4=4390
αα-diphenyl-β-picrylhydrazyl, free radical in crystal 3=18117
elec. conductivity, phenomenological theory 1=1012
electrical conductivity, theory 0=7915
fine grains, superantiferromagnetism 1=20156
fine particles, superparamagnetism 1=20155
free radicals, organic, crystalline 4=10295
garnets, review of Russian work 3=3092
haematite, effect of added Ti 0=21061
hexammine Ni halides, low-temp., unusual 1=7775
internal friction anomalies near Curie point 0=10256
Invar-type alloys, "latent" antiferromagnetism 0=10185
irridium salts, exchange interactions, spin resonance treatment 0=13876
lanthanide dinitrides, cubic, crystal field effects 4=1797
ludlamite, $Fe_3(PO_4)_2 \cdot 4H_2O$, ordered state 4=15625
magnetoelectric effects 1=1244
magnetoelec. effects, review 2=12665
manganites with low Mn^{4+} content, double exchange effects 0=10182
manganous halides tetrahydrates, absorption spectrum 0=13695
materials for millimeter and submillimeter wavelength devices 1=6381
metal–insulator transition 3=10729
methylamine chrome alum, transition to paramagnetic state 0=21030
molecular chains, interaction rel. to no. of links 3=6445
molecular chains, interaction rel. to number of links 2=8142
nuclear quadrupole resonance study 1=7807
olivines, synthetic 3=23142

Magnetic properties of substances—contd
antiferromagnetic—contd
organic free radicals, susceptibilities, exchange effects 2=12738
parallel susceptibility of crystal with two mag. sublattices, at low temps. 1=6384
picryl amino carbazyl, transitions 1=17364
polianite (MnO_2) 0=21064
pyrolusite, susceptibilities, temp. depend. 0=10186
rare earth cpds. with group V anions 3=20609
rare earth cpds (RAl_2-type) spin moments, coupling 3=991
rare earth Cu_2, exchange, weak 4=13122
rare earth intermetallic cpds., neutron diffr. obs. of order 4=30716
